The original sheath inverse bremsstrahlung model [P. J. Catto and R. M. More, 1977] is modified by including the vxB term in the equation of motion. It is shown that the present results axe significantly different from those derived without the vxB term. The vxB term is also important in interpreting the absorption mechanism. If the vxB term were neglected, the absorption of the light would be incorrectly interpreted as an increase in the transverse electron temperature. This would violate the conservation of the transverse components of the canonical momentum, in the case of a normally incident laser light. It is also shown that both the sheath inverse bremsstrahlung and the anomalous skin effect are limiting cases of the same collisionless absorption mechanism. Finally, results from PIC plasma simulations are compared with the absorption coefficient calculated from the linear theory.

31197 (UCRL-JC–119326) **X-ray framing cameras for > 5 keV imaging.** Landen, O.L.; Bell, P.M.; Costa, R.; Kalantar, D.H.; Bradley, D.K. Lawrence Livermore National Lab., CA (United States). 20 Jul 1995. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-950793–44: 40. annual meeting of the Society of Photo-Optical Instrumentation Engineers, San Diego, CA (United States), 9-14 Jul 1995). Order Number DE95017877. Source: OSTI; NTIS; INIS; GPO Dep.

Recent and proposed improvements in spatial resolution, temporal resolution, contrast, and detection efficiency for x-ray framing cameras are discussed in light of present and future laser-plasma diagnostic needs. In particular, improvements in image contrast above hard x-ray background levels is demonstrated by using high aspect ratio tapered pinholes.

31198 (UCRL-JC–120413) **Experiments and modeling with a large-area inductively coupled plasma (ICP) source.** Benjamin, R.D.; DiPeso, G.; Egan, P.O.; Parker, G.J.; Richardson, R.A.; Vitello, P. Lawrence Livermore National Lab., CA (United States). Jun 1995. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505270–1: 3. international workshop on advanced plasma tools, San Jose, CA (United States), 3-4 May 1995). Order Number DE95017045. Source: OSTI; NTIS; GPO Dep.

We describe initial experiments with a large (30 in.) plasma source chamber to explore the problems associated with large-area Inductively coupled plasma (ICP) sources to produce high density plasmas useful for processing 400 mm semiconductor wafers. Our experiments typically use a 25 in. diameter planar ICP coil driven at 13.56 MHz. Plasma and system data are taken in Ar and N_2 over the pressure range 3–50 mtorr. R.F. Inductive power was run up to 2000W, but typically data were taken over the range 100–1000W. Diagnostics Include optical emission spectroscopy, Langmuir probes, and B-dot probes as well as electrical circuit measurements. The B-dot and E-M measurements are compared with models based on commercial E-M codes. Initial indications are that uniform plasmas suitable for 400 mm processing are attainable. We present a comparison between computer modeling and experimental results for this source. Computer simulations using the fluid code INDUCT94 are used to explain variations In the plasma density profile measurements as a function of Inductive power, gas pressure and gas composition. Both Argon and Nitrogen discharges are modeled. INDUCT94 solves the 2D time-dependent fluid equations for electrons, ions and neutrals Including effects of both Inductive and capacitive coupling. Detailed volume and surface chemistry reactions are treated. We discuss the effects of pressure and power on plasma uniformity.

31199 (UCRL-JC–121197) **Efficient broadband third harmonic frequency conversion via angular dispersion.** Pennington, D.M.; Henesian, M.A.; Milam, D.; Eimerl, D. Lawrence Livermore National Lab., CA (United States). 18 Jul 1995. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–12: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE96000343. Source: OSTI; NTIS; INIS; GPO Dep.

In this paper we present experimental measurements and theoretical modeling of third harmonic (3ω) conversion efficiency with optical bandwidth. Third harmonic conversion efficiency drops precipitously as the input bandwidth significantly exceeds the phase matching limitations of the conversion crystals. For Type I/Type II frequency tripling, conversion efficiency be-gins to decrease for bandwidths greater than ~60 GHz. However, conversion efficiency corresponding to monochromatic phase-matched beams can be recovered provided that the instantaneous Propagation vectors are phase matched at all times. This is achieved by imposing angular spectral dispersion (ASD) on the input beam via a diffraction grating, with a dispersion such that the phase mismatch for each frequency is zero. Experiments were performed on the Optical

Sciences Laser (OSL), a 1–100 J class laser at LLNL. These experiments used a 200 GHz bandwidth source produced by a multipassed electro-optic phase modulator. The spectrum produced was composed of discrete frequency components spaced at 3 GHz intervals. Angular dispersion was incorporated by the addition of a 1200 gr/mm diffraction grating oriented at the Littrow angle, and capable of rotation about the beam direction. Experiments were performed with a pulse length of 1-ns and a 1ω input intensity of $\sim$ 4 GW/cm^2 for near optimal dispersion for phase matching, 5.2 μrad/GHz, with 0.1, 60, and 155 GHz bandwidth, as well as for partial dispersion compensation, 1.66 μrad/GHz, with 155 GHz and 0.1 GHz bandwidth. The direction of dispersion was varied incrementally 360° about the beam diameter. The addition of the grating to the beamline reduced the narrowband conversion efficiency by approximately 10%.

31200 (UCRL-JC–121200) **X-ray laser interferometry for probing high-density plasmas.** Wan, A.S. (and others); Da Silva, L.B.; Barbee, T.W. Jr. Lawrence Livermore National Lab., CA (United States). Jun 1995. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-950793–37: 40. annual meeting of the Society of Photo-Optical Instrumentation Engineers, San Diego, CA (United States), 9-14 Jul 1995). Order Number DE95017295. Source: OSTI; NTIS; GPO Dep.

Collisionally pumped soft x-ray lasers now operate over a wavelength range extending from 4-40 nm. With the recent advances in the development of multilayer mirrors and beamsplitters in the soft x-ray regime, the authors can utilize the unique properties of x-ray lasers to study large, rapidly evolving laser-driven plasmas with high electron densities. Using a neon-like yttrium x-ray laser which operates at a wavelength of 15.5 nm, they have performed a series of x-ray laser interferometry experiments to characterize plasmas relevant to inertial confinement fusion. In this paper the authors describe experiments using a soft x-ray laser interferometer, operated in the Mach-Zehnder configuration, to study CH plasmas and exploding foil targets commonly used for x-ray laser targets. The two-dimensional density profiles obtained from the interferograms allow the authors to validate and benchmark their numerical models used to study the physics of laser-plasma interactions.

31201 (UCRL-JC–121582) **X-ray spectroscopy and imaging of a plasma collision.** Chenais-Popovics, C. (Ecole Polytechnique - 91, Palaiseau (France). Lab. pour l'Utilisation des Lasers Intenses); Rancu, O.; Renaudin, P. Lawrence Livermore National Lab., CA (United States). 14 Jul 1995. 8p. Sponsored by USDOE, Washington, DC (United States);European Economic Community, Brussels (Belgium). DOE Contract W-7405-ENG-48. (CONF-950793–29: 40. annual meeting of the Society of Photo-Optical Instrumentation Engineers, San Diego, CA (United States), 9-14 Jul 1995). Order Number DE95016631. Source: OSTI; NTIS; INIS; GPO Dep.

The collision of laser-produced plasmas has been diagnosed by x-ray spectroscopy and imaging. The two colliding plasmas are produced on Al thin foils at a distance of 200 to 900 μm irradiated at λ = 0.53 μm with laser intensities of 3 x 10^{13} to 6 x 10^{13} W/cm^2. Interpenetration of the plasmas was visualized by replacing one of the foils material by magnesium. The main diagnostics viewing the inter-target space were time-resolved monochromatic imaging of the $1s^2$ 1s3p aluminum line (HeB at λ – 6.635 Å). Doppler broadening measurement with a vertical Johann very high resolution spectrograph in the range 6.5–6.7Å, space-resolved high resolution spectra of the dielectronic satellites of the 1s-2p 1 yman, space-resolved spectra with a flat-crystal spectrograph in the range 5–7 Å and in the range of 43–48 Å obtained with a new OHM crystal spectrograph and a pinhole camera. A multifluid eulerian monodimensional hydrodynamic code coupled with a radiative-atomic package provided simulations of the experiments. Hydrodynamic 2D simulations calculating the lateral expansion of the plasma enabled a reliable treatment of reabsorption along the line of sight of the spectrographs. The size the time duration of the collision, the plasma parameters (Te,Ti and ne) in the collision region and interpenetration were measured. The hydrocode simulations give a good understanding of the behavior of the collision in function of intertarget distance and laser intensity.

31202 (UCRL-JC–121589) **Characterization and modeling of soft x-ray lasers.** Wan, A.S.; Cauble, R.; Celliers, P.; DaSilva, L.B.; Libby, S.B.; London, R.A.; Nilsen, J.; Moreno, J.C.; Weber, F. Lawrence Livermore National Lab., CA (United States). [1995]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9510193–4: LEOS '95: Institute of Electrical and Electronics Engineers Lasers and Electro-Optics Society annual meeting, San Francisco, CA (United States), 30 Oct - 2 nov 1995). Order Number DE96000697. Source: OSTI; NTIS; INIS; GPO Dep.

This paper describes our theoretical, numerical, and experimental development of short-pulse-duration, high brightness, and enhanced coherence x-ray lasers (XRLs) as sources suitable for applications as imaging diagnostics for laser plasmas.

31203 (UCRL-JC–121629) **Development of XUV-interferometry (155 Å) using a soft x-ray laser.** Da Silva, L.B. (and others); Barbee, T.W.; Cauble, R. Lawrence Livermore National Lab., CA (United States). 1 Aug 1995. 20p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-950793–47: 40. annual meeting of the Society of Photo-Optical Instrumentation Engineers, San Diego, CA (United States), 9-14 Jul 1995). Order Number DE96000702. Source: OSTI; NTIS; INIS; GPO Dep.

Over the past several years the authors have developed a variety of techniques for probing plasmas with x-ray lasers. These have included direct high resolution plasma imaging to quantify laser produced plasma uniformities and moire deflectometry to measure electron density profiles in one-dimension. Although these techniques have been valuable, a need existed for direct two dimensional measurements of electron densities in large high density plasmas. For this reason the authors have worked on developing a xuv interferometer compatible with the harsh environment of laser produced plasmas. This paper describes the design and presents some results showing excellent fringe visibility using the neon-like yttrium x-ray laser operating at 155 Å. The coherence properties of this x-ray laser source were measured using interferometry and are also discussed.

31204 (CONF-9505105–17) **Measurement of rf voltages on the plasma-touching surfaces of ICRF antennas.** Hoffman, D.J.; Baity, F.W.; Bell, G.L.; Bigelow, T.S.; Caughman, J.B.O.; Goulding, R.H.; Haste, G.R.; Ryan, P.M.; Zhang, H. Oak Ridge National Lab., TN (United States). [1995]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From 11. topical conference on radio frequency in plasmas; Palm Springs, CA (United States); 17-19 May 1995. Order Number DE95017400. Source: OSTI; NTIS; INIS; GPO Dep.

Measurements of the rf voltages on Faraday shields and protection bumpers have been made for several loop antennas, including the mock-up antenna and Al for JET, the original antenna for Tore Supra, the present ASDEX-U antenna, and the folded waveguide. The loop antennas show voltages that scale to $\approx$12 kV for a maximum input voltage of 30 kV with 0/0 phasing. The voltages are dramatically reduced for 0/π phasing. These voltages are significant in that they can substantially increase the rf sheath potential beyond the levels associated with the simple electromagnetic field linkage from the current straps that results in plasma heating. In this paper, we investigate and measure the source of these voltages, their scaling with antenna impedance, and the differences between the loop arrays.

31205 (CONF-9505254–5) **ORNL stellarator divertor studies.** Rome, J.A.; Lee, D.K.; England, A.C.; Lyon, J.F. Oak Ridge National Lab., TN (United States). [1995]. 5p. Sponsored by

USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From International stellarator workshop; Madrid (Spain); 22-26 May 1995. Order Number DE95017383. Source: OSTI; NTIS; INIS; GPO Dep.

Oak Ridge National Laboratory (ORNL) is studying various aspects of divertors in different stellarators. We are looking at a local island divertor (LID) on the CHS helical system, and potential designs of divertors that use islands for modular stellarators such as W7-AS and the modular helias-like heliac MHH chosen for the US Stellarator Power Plant Study. Although the helical CHS configuration is quite different from the modular W 7-AS configuration both rely on the island structure outside the last closed flux surface (LCFS) to aid in funneling escaping plasma flux and to protect the leading edges of the divertor plates. However, the way that the islands are used is quite different.

31206 (CONF-9505284–1) **Integrated design and analysis of rf heating and current drive systems.** Ryan, P.M. (and others); Carter, M.D.; Goulding, R.H. Oak Ridge National Lab., TN (United States). [1995]. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From 11. topical conference on radio frequency power in plasmas; Palm Springs, CA (United States); 17-19 May 1995. Order Number DE95017416. Source: OSTI; NTIS; INIS; GPO Dep.

The design, analysis, and performance evaluation of rf power systems ultimately requires accurate modeling of a chain of subsystems starting with the rf transmitter and ending with the power absorption in the plasma. A collection of computer codes is used at ORNL to calculate the plasma loading and wave spectrum for a three-dimensional rf antenna, the transmission/reflection properties of the Faraday shield and its effect on the electrical characteristics and phase velocity of the antenna, the internal coupling among antenna array components and the incorporation of the antenna array into a transmission line model of the phase control, tuning, matching, and power distribution system. Some codes and techniques are more suited for the rapid evaluation of system design progressions, while others are more applicable to the detailed analysis of final designs or existing hardware. The interaction of codes and the accuracy of calculations will be illustrated by the process of determining the plasma loading as a function of phasing and density profiles for the TFTR ICRH antennas and comparing the results to measurements. An example of modeling a complex antenna geometry will be the comparison of calculations with the measured electrical response of a four-strap mockup of the JET A2 antenna array which was loaned to ORNL by the JET ICRH team.

31207 (CONF-9505284–3) **Commissioning of the long-pulse fast wave current drive antennas for DIII-D.** Baity, F.W. (Oak Ridge National Lab., TN (United States)); Barber, G.C.; Goulding, R.H.; Hoffman, D.J.; DeGrassie, J.S.; Pinsker, R.I.; Petty, C.C.; Cary, W. Oak Ridge National Lab., TN (United States); General Atomics, San Diego, CA (United States). [1995]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400 ; AC03-89ER51114. From 11. topical conference on radio frequency power in plasmas; Palm Springs, CA (United States); 17-19 May 1995. Order Number DE95017414. Source: OSTI; NTIS; INIS; GPO Dep.

Two new four-element fast wave current drive antennas have been installed on DIII-D. These antennas are designed for 10-s pulses at 2 MW each in the frequency range of 30 to 120 MHz. Each element comprises two poloidal segments fed in parallel in order to optimize plasma coupling at the upper end of the frequency range. The antennas are mounted on opposite sides of the vacuum vessel, in ports designated 0° and 180° after their toroidal angle. Each antenna array is fed by a single transmitter. The power is first split two ways by means of a 3-dB hybrid coupler, then each of these lines feeds a resonant loop connecting a pair of array elements. The power transfer during asymmetric phasing is shunted between resonant loops by a decoupler. The resonant loops are fitted with line stretchers so that multiple frequencies of operation are possible without reconfiguring the transmission line. Commissioning of these antennas has been underway since June 1994. Several deficiencies in the transmission line system were uncovered during initial vacuum conditioning, including problems with the transmission line insulators and with the drive rods for the variable elements. The former was solved by replacing the original alumina insulators, and the latter has been avoided during operation to date by positioning the tuners to avoid high voltage appearing on the drive rods. A modified design for the drive rods will be implemented before RF operations resume operation June 1995. New transmitters were procured from ABB for the new antennas and were installed in parallel with the antenna installation. During initial vacuum conditioning of the antenna in the 180° port a fast digital oscilloscope was used to try to pinpoint the location of arcing by a time-of-flight technique and to develop an understanding of the typical arc signature in the system.

31208 (DOE/CH/03073–T74) **Potential safe termination by injection of polypropylene pellets in JET.** Schmidt, G.L. (Princeton Plasma Physics Lab., NJ (United States)); Ali-Arshad, S.; Bartlett, D. Princeton Univ., NJ (United States). Plasma Physics Lab. [1995]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. (CONF-9507182–1: European Physical Society conference, Bournmouth (United Kingdom), 3-7 Jul 1995). Order Number DE96001109. Source: OSTI; NTIS; INIS; GPO Dep.

Thermal energy and the magnetic field energy associated with the plasma current must be dissipated safely when a tokamak discharge is terminated in a disruption. Magnetic energy can be dissipated by impurity radiation if position control is maintained. Prior to the dissipation of magnetic energy, thermal energy is usually conducted to the plasma contact points on a 1ms time scale in a thermal quench. A resistive, highly radiating plasma formed prior to the thermal quench, might dissipate both the thermal and magnetic energy by radiation minimizing damage due to local deposition. High speed injection of a low Z material can produce a resistive, highly radiating plasma on a 1ms time scale. Neon has recently been used in such an application on JT60-U. A large carbon pellet producing dilution temperatures < 1 keV is a possible alternative. This paper summarizes the results of an initial experiment performed in JET using carbon injected at high speed, as a 6mm polypropylene pellet, to investigate this potential approach to a safe plasma termination.

31209 (DOE/EA–0813) **The Tokamak Fusion Test Reactor decontamination and decommissioning project and the Tokamak Physics Experiment at the Princeton Plasma Physics Laboratory. Environmental Assessment.** USDOE, Washington, DC (United States). 27 May 1994. 185p. Sponsored by USDOE, Washington, DC (United States). Order Number DE95012249. Source: OSTI; NTIS; GPO Dep.

If the US is to meet the energy needs of the future, it is essential that new technologies emerge to compensate for dwindling supplies of fossil fuels and the eventual depletion of fissionable uranium used in present-day nuclear reactors. Fusion energy has the potential to become a major source of energy for the future. Power from fusion energy would provide a substantially reduced environmental impact as compared with other forms of energy generation. Since fusion utilizes no fossil fuels, there would be no release of chemical combustion products to the atmosphere. Additionally, there are no fission products formed to present handling and disposal problems, and runaway fuel reactions are impossible due to the small amounts of deuterium and tritium present. The purpose of the TPX Project is to support the development of the physics and technology to extend tokamak operation into the continuously operating (steady-state) regime, and to demonstrate advances in fundamental tokamak performance. The purpose of TFTR D&D is to ensure compliance with DOE Order 5820.2A "Radioactive Waste Management" and to remove environmental and health hazards posed by the TFTR in a non-operational mode. There are two proposed actions evaluated in this environmental assessment (EA). The actions are related because one must take place before the other can proceed. The proposed actions assessed in this EA are: the decontamination and decommissioning (D&D) of the Tokamak Fusion Test Reactor (TFTR); to be followed by the construction and operation of the Tokamak Physics Experiment (TPX). Both of these proposed actions would take place primarily within the TFTR Test Cell Complex at the Princeton Plasma Physics Laboratory (PPPL). The TFTR is located on "D-site" at the James Forrestal Campus of

Princeton University in Plainsboro Township, Middlesex County, New Jersey, and is operated by PPPL under contract with the United States Department of Energy (DOE).

31210 (DOE/ER–0313/17, pp. 255-263) **An investigation of the desorption of hydrogen from lithium oxide using temperature programmed desorption and diffuse reflectance infrared spectroscopy.** Kopasz, J.P. (Argonne National Lab., Chicago, IL (United States)); Johnson, C.E.; Ortiz-Villafuerte, J. Oak Ridge National Lab., TN (United States). Apr 1995. In *Fusion materials semiannual progress report for the period ending September 30, 1994*. 390p. Order Number DE95013663. Source: OSTI; NTIS; INIS; GPO Dep.

The addition of hydrogen to the purge stream has been shown to enhance tritium release from ceramic breeder materials; however, this added hydrogen can lead to increased costs in the tritium purification system. The objective of this work is to develop an understanding of the interactions between hydrogen and lithium oxide surfaces so that the authors can take full advantage of the observed enhancement of tritium release caused by hydrogen addition without incurring high costs in the tritium purification plant.

31211 (DOE/SF–19460-91) **LLE Review: Volume 63. Quarterly report, April–June 1995.** Craxton, R.S. (ed.). Rochester Univ., NY (United States). Lab. for Laser Energetics. [1995]. 60p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FC03-92SF19460. Order Number DE96000767. Source: OSTI; NTIS; INIS; GPO Dep.

This volume of the LLE Review, covering the period of April–June 1995, includes a description of the initial performance results of the upgraded OMEGA laser system. A series of acceptance tests were completed, demonstrating that all 60 beams can irradiate targets with more energy and better beam balance than was required by the Department of Energy's acceptance criteria. Other articles in this volume include a description of a novel energy measurement system used to diagnose all 60 OMEGA beams; a theoretical calculation of the cutoff wave number of the ablative Rayleigh-Taylor instability, applicable to both direct and indirect drive; a description of a new algorithm used for designing distributed phase plates that will produce super-Gaussian focal-plane irradiance profiles: a study of the photoresponse of high-T_cYBCO thin films; and a description of magnetorheological finishing, a new process for optics polishing.

31212 (GA-A–21935) **DIII-D Research Operations annual report to the US Department of Energy, October 1, 1993–September 30, 1994.** Lohr, J. (ed.) (General Atomics, San Diego, CA (United States)). General Atomics, San Diego, CA (United States); Lawrence Livermore National Lab., CA (United States); Oak Ridge National Lab., TN (United States). Jul 1995. 111p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-89ER51114 ; AC05-84OR21400 ; W-7405-ENG-48. Order Number DE95015977. Source: OSTI; NTIS; INIS; GPO Dep.

The DIII-D tokamak research program is managed by General Atomics (GA) for the US Department of Energy (DOE). Major program participants include GA, Lawrence Livermore National Laboratory (LLNL), Oak Ridge National Laboratory (ORNL), and the University of California together with several other national laboratories and universities. The DIII-D is a moderate sized tokamak with great flexibility and extremely capable subsystems. The primary goal of the DIII-D tokamak research program is to provide data for development of a conceptual physics blueprint for a commercially attractive fusion power plant. In so doing, the DIII-D program provides physics and technology R&D output to aid the International Thermonuclear Experimental Reactor (ITER) and the Princeton Tokamak Physics Experiment (TPX) projects. Specific DIII-D objectives include the achievement of steady-state plasma current as well as the demonstration of techniques for radio frequency heating, divertor heat removal, particle exhaust and tokamak plasma control. The DIII-D program is addressing these objectives in an integrated fashion in plasmas with high beta and with high confinement. The long-range plan is organized with two principal elements, the development of an advanced divertor and the development of advanced tokamak concepts. These two elements have a common goal: an improved demonstration reactor (DEMO) with lower cost and smaller size than present DEMO concepts. In order to prepare for this long-range development, in FY94 the DIII-D research program concentrated on three major areas: Divertor and Boundary Physics, Advanced Tokamak studies, and Tokamak Physics.

31213 (GA–A22038) **Study of electron temperature profile evolution during L-H transition with measurement of electron cyclotron emission on DIII-D.** Wang, Z. (Southwest Inst. of Physics, Sichuan, SC (China)); Hsieh, C.; Zhang, J.; Lohr, J.; Stockdale, R.E.; Bell, G.L.; Wilgen, J.B.; Luo, J. General Atomics, San Diego, CA (United States). Jun 1995. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-89ER51114. (CONF-950112–5: 9. joint workshop on electron cyclotron emission and electron cyclotron resonance heating, Borrego Springs, CA (United States), 23-26 Jan 1995). Order Number DE95017845. Source: OSTI; NTIS; INIS; GPO Dep.

The L-H transition has been intensively investigated since it was discovered in the ASDEX tokamak in 1982. Considerable experimental evidence shows that the formation of the transport barrier at the plasma edge, during which the edge density and temperature gradients suddenly increase, is a common feature in the L-H transition discharge in all devices. Formation of the transport barrier is indicated by a sharp reduction in the $D\alpha$ radiation at the periphery of the plasma despite a simultaneous increase in the plasma density. A new heterodyne electron cyclotron emission radiometer, which had been built for the ATF device at the Oak Ridge National Laboratory, has been installed on DIII-D. The instrument features 32 channels with high temporal and spatial resolution and covers the outer half of DIII-D plasma at full magnetic field. Initial measurements with the instrument at the time of the L-H transition show that there is no T_e, precursor to the transition and this is further supported by observations during dithering L-H transition where the transport barrier is immediately destroyed when the plasma briefly returns to the L-mode during process of the transition. Other applications of the new instrument have included T_e, profile measurements during edge localized modes and during Ohmic and beam-heated sawteeth, which highlight the magnetic reconnection process. The instrument will be described and some of these results win be presented.

31214 (GA-A–22081) **Direct electron heating with directional fast wave launch on DIII-D.** Pinsker, R.I. (General Atomics, San Diego, CA (United States)); Chiu, S.C.; Baity, F.W. General Atomics, San Diego, CA (United States); Lawrence Livermore National Lab., CA (United States). Jul 1995. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-89ER51114 ; W-7405-ENG-48. (CONF-9505105–14: 11. topical conference on radio frequency in plasmas, Palm Springs, CA (United States), 17-19 May 1995). Order Number DE95016481. Source: OSTI; NTIS; INIS; GPO Dep.

Direct electron heating obtained with a four-element array phased at $(0, \pi/2, \pi, 3\pi/2)$ without a Faraday shield is compared with that obtained with a Faraday shield on the same antenna.

31215 (GA-C–21941) **ITER convertible blanket evaluation.** Wong, C.P.C.; Cheng, E. Raytheon Engineers and Constructors, Inc., Philadelphia, PA (United States). [1995]. 29p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-94SF20282. Order Number DE95017612. Source: OSTI; NTIS; INIS; GPO Dep.

Proposed International Thermonuclear Experimental Reactor (ITER) convertible blankets were reviewed. Key design difficulties were identified. A new particle filter concept is introduced and key performance parameters estimated. Results show that this particle filter concept can satisfy all of the convertible blanket design requirements except the generic issue of Be blanket lifetime. If the convertible blanket is an acceptable approach for ITER operation, this particle filter option should be a strong candidate.

31221 (JAERI-Tech–95-032) **Feasibility study of first wall electrical connector.** Kitamura, Kazunori (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Takatsu, Hideyuki; Koizumi, Kouichi; Tsunematsu, Toshihide. Japan Atomic Energy Research Inst., Tokyo (Japan). May 1995. 22p. Order Number DE96701317. Source: OSTI; NTIS; INIS.

A feasibility study of first wall electrical connector concept has been performed to mitigate plasma disruption effect of electromagnetic force on the blanket structure. A multi-layered thin copper plate was applied to the connector structure, which was installed between adjacent first walls with keys and bolts. An optimization on the connector mechanical stiffness was performed to withstand the large electromagnetic forces at the plasma disruption and to absorb the module displacement between adjacent blanket structures due to thermal expansion of the modular blanket. As the results, a possible structural solution of the first wall electrical connector concept has been developed, which seems feasible in the views of mechanical integrity and fabricability, however, further detailed study on the connector feasibility is required. (author).

31222 (JAERI-Tech–95-033) **Fabrication and high heat flux test of divertor cooling elements.** Suzuki, Satoshi (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Araki, Masanori; Nakamura, Kazuyuki; Satoh, Kazuyoshi; Yokoyama, Kenji; Dairaku, Masayuki; Akiba, Masato. Japan Atomic Energy Research Inst., Tokyo (Japan). Jun 1995. 68p. Order Number DE96701318. Source: OSTI; NTIS; INIS.

The plasma facing components in ITER are subjected to a high heat flux from fusion plasma. The heat flux is not only higher than that of existing tokamaks but also has a longer pulse duration (burn time). To minimize a peaking of the heat flux, the thermal deformation towards the plasma should be restrained. One-meter-long monoblock divertor modules with a sliding support structure were fabricated and tested at JAERI. Two kinds of support mechanisms were provided to minimize the thermal deformation of the modules in the upward and downward directions ; one is a pin type sliding structure and the other is a rail type support structure. Both modules were tested on the electron beam HHF test facility, JEBIS (JAERI Electron Beam Irradiation System), in JAERI. The steady-state heat flux of 15 MW/m^2 was applied to the surface of the modules to simulate the design condition of ITER CDA. As a result of the HHF test, the performance of the sliding support structures was successfully demonstrated. Three dimensional elastic stress analyses were conducted using a finite element method. The result shows that the relatively high thermal stress is observed at the cooling tube ; and that the maximum thermal stress at the cooling tube exceeds its yield strength. It is necessary to perform the lifetime evaluation of the copper cooling tube against cyclic thermal stresses. (author).

31223 (LA-UR–95-2815) **Capacitor and rail-gap development for the Atlas machine Marx modules.** Reass, W.A. (Los Alamos National Lab., NM (United States)); Bowman, D.W.; Gribble, R.F.; Griego, J.R.; Thompson, C.; Parsons, W.M.; Cooper, R.A.; Casper, D.C. Los Alamos National Lab., NM (United States). [1995]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-950750–35: 10. Institute of Electrical and Electronics Engineers (IEEE) pulsed power conference, Albuquerque, NM (United States), 10-13 Jul 1995). Order Number DE95016929. Source: OSTI; NTIS; INIS; GPO Dep.

This paper presents the engineering issues and development criteria utilized to evolve the Atlas Marx bank pulse power components. The capacitor and rail-gap required alterations from existing designs to minimize system inductance and component count, maximize reliability, and enhance maintainability. For the capacitors, development has resulted in a plastic cased device with double ended bushings. The design of the capacitors' output electrodes, foil packs, and internal interconnect webbing results in a capacitor with improved performance. The capacitors are rated at 33.5 uF and 60 kV and are housed in a 28 in. x 29 in. x 13 in. fiberglass case. Terminal inductance is less than 15 nH with a design discharge current greater than 650 kA. An improved "third generation" rail-gap will be utilized and is a product of the ACE machine developments at Maxwell Laboratories. The gap has a polyurethane body and one piece electrodes. To minimize prefires, a modified internal profile reduces the E-field and increases tracking length between the electrodes. With an individual Marx stage charged "+" and "–" and a trigger rail with 50/50 grading (midplane), external trigger bias or coupling components are not required. This further reduces system component count. To further reduce gap prefires and environmental concerns, high pressure air, instead of the typical Argon/SF6 mixture, will be used. The metallic switching by-products will form insulating oxides and the gap flushing procedures are simplified. To ensure multi-channel discharges, fast dV/dT trigger voltages (~30 kV/nS), similar to those developed for the Staged Theta-Pinch railgaps (a Scyllac era machine at Los Alamos), will be utilized.

31224 (LA-UR–95-2816) **Design of the individual Marx modules for the Atlas machine 36 megajoule, 25 megampere capacitor bank.** Reass, W.A.; Bowman, D.W.; Gribble, R.F.; Griego, J.R.; Thompson, C.; Parsons, W.M. Los Alamos National Lab., NM (United States). [1995]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-950750–34: 10. Institute of Electrical and Electronics Engineers (IEEE) pulsed power conference, Albuquerque, NM (United States), 10-13 Jul 1995). Order Number DE95016928. Source: OSTI; NTIS; INIS; GPO Dep.

This paper presents the preliminary electrical and mechanical design of the Atlas machine's 1.8 megajoule, 600 kV Marx modules. The modules are implemented with plastic cased capacitors similar to those developed for the Defense Nuclear Agency (DNA)

ACE II and ACE IV machines. The double ended electrode capacitor style has been dubbed "FASTCAP." Electrodes are provided for mounting rail-gaps on one side and flat plate transmission line damping resistors on the other. This provides for an extremely low circuit inductance. A series array of ten capacitors, each rated at 60 kV, 33.5 uF, and 60 kJ, with their five triggered rail-gaps, form a Marx submodule. Three Marx submodules are nested into a large G-10 fiberglass rack to form a complete Marx module. The module support rack has individual capacitor shelves that ease assembly and replacement. The Marx's design also facilitates construction, testing and verification of a modules performance prior to installation. Modules will be repaired or maintained in a separate test bay without affecting machine operation schedules. Railgap maintenance will become part of a regularly-scheduled preventative maintenance program as spare modules are installed and removed from the machine.

31225 (LA-UR–95-2868) **The Los Alamos/Arzamas-16 collaboration of ultrahigh magnetic fields and ultrahigh energy pulsed power.** Chernyshev, V.K. (All-Russian Scientific Research Institute of Experimental Physics, Arzamas-16, Nizhni Novgorod Region (Russian Federation)); Mokhov, V.N.; Pavlovskii, A.I.; Ekdahl, C.A.; Fowler, C.M.; Reinovsky, R.E.; Younger, S.M. Los Alamos National Lab., NM (United States). [1995]. 20p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-950750–40: 10. Institute of Electrical and Electronics Engineers (IEEE) pulsed power conference, Albuquerque, NM (United States), 10-13 Jul 1995). Order Number DE96000010. Source: OSTI; NTIS; GPO Dep.

The end of the Cold War has made possible some remarkable scientific adventures–joint research projects between scientific institutions of the United States and the Russian Federation. Perhaps most unprecedented of the new partnerships is a formal collaboration which has been established between the All-Russian Scientific Research Institute of Experimental Physics and the Los Alamos National Laboratory (LANL), the two institutes which designed the first nuclear weapons for their respective countries. In early 1992, emerging governmental policy in the US and Russia began to encourage "lab-to-lab" interactions between the nuclear weapons design laboratories of the two countries. Each government recognized that as nuclear weapons stockpiles and design activities were being reduced, highly qualified scientists were becoming available to use their considerable skills in fundamental scientific research of interest to both nations. VNIIEF and LANL quickly recognized a common interest in the technology and applications of magnetic flux compression, the technique for converting the chemical energy released by high-explosives into intense electrical pulses and intensely concentrated magnetic energy. This document reports on current projects of the collaboration.

31226 (LA-UR–95-17922, pp. 889) **The PIREX proton irradiation facility.** Victoria, M. (Association EURATOM, Villigen (Switzerland)). Los Alamos National Lab., NM (United States). [1995]. (CONF-9407103–: International conference on accelerator-driven transmutation technologies and applications, Las Vegas, NV (United States), 25 Jul - 1 aug 1994). In *AIP conference on accelerator driven transmutation technologies and applications, Los Vegas, Nevada, July 25-29, 1994.* 958p. Order Number DE95014018. Source: OSTI; NTIS; INIS.

The proton Irradiation Experiment (PIREX) is a materials irradiation facility installed in a beam line of the 590 MeV proton accelerator at the Paul Scherrer Institute. Its main purpose is the testing of candidate materials for fusion reactor components. Protons of this energy produce simultaneously displacement damage and spallation products, amongst them helium and can therefore simulate any possible synergistic effects of damage and helium, that would be produced by the fusion neutrons.

31227 (LBL–36541) **Beam dynamics in heavy ion fusion.** Seidl, P. Lawrence Berkeley Lab., CA (United States). Apr 1995. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-950512–299: Particle accelerator conference, Dallas, TX (United States), 1-5 May 1995). Order Number DE95014794. Source: OSTI; NTIS; INIS; GPO Dep.

A standard design for heavy ion fusion drivers under study in the US is an induction linac with electrostatic focusing at low energy and magnetic focusing at higher energy. The need to focus the intense beam to a few-millimeter size spot at the deuterium-tritium target establishes the emittance budget for the accelerator. Economic and technological considerations favor a larger number of beams in the low-energy, electrostatic-focusing section than in the high-energy, magnetic-focusing section. Combining four beams into a single focusing channel is a viable option, depending on the growth in emittance due to the combining process. Several significant beam dynamics issues that are, or have been, under active study are discussed: large space charge and image forces, beam wall clearances, halos, alignment, longitudinal instability, and bunch length control.

31228 (LBL–36542) **Heavy Ion fusion 2 MV injector.** Yu, S. (Lawrence Berkeley Lab., CA (United States). Accelerator and Fusion Research Div.); Eylon, S.; Henestroza, E. Lawrence Berkeley Lab., CA (United States). Apr 1995. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-950512–324: Particle accelerator conference, Dallas, TX (United States), 1-5 May 1995). Order Number DE96000133. Source: OSTI; NTIS; INIS; GPO Dep.

A heavy-ion-fusion driver-scale injector has been constructed and operated at Lawrence Berkeley Laboratory. The injector has produced 2.3 MV and 950 mA of K^+, 15% above original design goals in energy and current. Normalized edge emittance of less than 1 π mm-mr was measured over a broad range of parameters. The head-to-tail energy flatness is less than $\pm$ 0.2% over the 1 μs pulse.

31229 (LBL–36622) **Beam dynamics studies of the Heavy Ion Fusion Accelerator injector.** Henestroza, E. (Lawrence Berkeley Lab., CA (United States). Accelerator and Fusion Research Div.); Yu, S.S.; Eylon, S.; Grote, D.P. Lawrence Berkeley Lab., CA (United States). Apr 1995. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-950512–318: Particle accelerator conference, Dallas, TX (United States), 1-5 May 1995). Order Number DE96000117. Source: OSTI; NTIS; INIS; GPO Dep.

A driver-scale injector for the Heavy Ion Fusion Accelerator project has been built at LBL. This machine has exceeded the design goals of high voltage (> 2 MV), high current (> 0.8 A of K^+) and low normalized emittance (< 1 π mm-mr). The injector consists of a 750 keV diode pre-injector followed by an electrostatic quadrupole accelerator (ESQ) which provides strong (alternating gradient) focusing for the space-charge dominated beam and simultaneously accelerates the ions to 2 MeV. The fully 3-D PIC code WARP together with EGUN and POISSON were used to design the machine and analyze measurements of voltage, current and phase space distributions. A comparison between beam dynamics characteristics as measured for the injector and corresponding computer calculations will be presented.

31230 (NISTIR–5013) **Electromechanical properties of superconductors for DOE fusion applications.** Ekin, J.W.; Bray, S.L.; Lutgen, C.L.; Bahn, W.L. National Inst. of Standards and Technology (NEL), Boulder, CO (United States). Electromagnetic Technology Div. Jan 1994. 53p. Sponsored by USDOE, Washington, DC (United States);Department of Commerce, Washington, DC (United States). DOE Contract AI01-84ER52113. Order Number DE95015476. Source: OSTI; NTIS; INIS; GPO Dep.

The electrical performance of many superconducting materials is strongly dependent on mechanical load. This report presents electromechanical data on a broad range of high-magnetic-field superconductors. The conductors that were studied fall into three general categories: Candidate conductors, experimental conductors, and reference conductors. Research on candidate conductors for fusion applications provides screening data for superconductor selection as well as engineering data for magnet design and performance analysis. The effect of axial tensile strain on critical-current density was measured for several Nb_3Sn candidate conductors including the US-DPC (United States Demonstration Poloidal Coil) cable strand and an ITER (International Thermonuclear Experimental Reactor) candidate conductor. Also, data are presented on promising experimental superconductors that have strong potential for fusion applications. Axial strain measurements were made on a V_3Ga tape conductor that has good performance

at magnetic fields up to 20 T. Axial strain data are also presented for three experimental Nb_3Sn conductors that contain dispersion hardened copper reinforcement for increased tensile strength. Finally, electromechanical characteristics were measured for three different Nb_3Sn reference conductors from the first and second VAMAS (Versailles Project on Advanced Materials and Standards) international Nb_3Sn critical-current round robins. Published papers containing key results, including the first measurement of the transverse stress effect in Nb_3Sn, the effect of stress concentration at cable-strand crossovers, and electromechanical characteristics of Nb_3Al, are included throughout the report.

31231 (NUREG/CP–0142-Vol.1, pp. 532-553) **An experimental investigation of the post-CHF enhancement factor for a prototypical ITER divertor plate with water coolant.** Marshall, T.D. (Rensselaer Polytechnic Institute, Troy, NY (United States)); Watson, R.D.; McDonald, J.M. Nuclear Regulatory Commission, Washington, DC (United States). Div. of Systems Technology; American Nuclear Society, La Grange Park, IL (United States); American Inst. of Chemical Engineers, New York, NY (United States); American Society of Mechanical Engineers, New York, NY (United States); Canadian Nuclear Society, Toronto, ON (Canada); Japan Society of Multiphase Flow, Kyoto (Japan). Sep 1995. (CONF-950904–Vol.1: 7. international meeting on nuclear reactor thermal hydraulics, Saratoga, NY (United States), 10-15 Sep 1995). In *Proceedings of the 7th International Meeting on Nuclear Reactor Thermal-Hydraulics NURETH-7. Volume 1, Sessions 1-5.* 862p. Source: OSTI; NTIS; INIS; GPO.

In an off-normal event, water-cooled copper divertor plates in the International Thermonuclear Experimental Reactor (ITER) may either experience heat loads beyond their design basis, or the normal heat loads may be accompanied by low coolant pressure and velocity. The purpose of this experiment was to illustrate that during one-sided heating, as in ITER, a copper divertor plate with the proper side wall thickness, at low system pressure and velocity can absorb without failing an incident heat flux, q_i, that significantly exceed the value, q_i^{CHF}, which is associated with local CHF at the wall of the coolant channel. The experiment was performed using a 30 kW electron beam test system for heating of a square cross-section divertor heat sink with a smooth circular channel of 7.63 mm diameter. The heated width, length, and wall thickness were 16, 40, and 3 mm, respectively. Stable surface temperatures were observed at incident heat fluxes greater than the local CHF point, presumably due to circumferential conduction around the thick tube walls when q_i^{CHF} was exceeded. The Post-CHF enhancement factor, η, is defined as the ratio of the incident burnout heat flux, q_i^{BO}, to q_i^{CHF}. For this experiment with water at inlet conditions of 70°C, 1 m/s, and 1 MPa, q_i^{CHF} and q_i^{BO} were 600 and 1100 W/cm^2, respectively, which gave an η of 1.8.

31232 (NUREG/CP–0142-Vol.2, pp. 933-946) **Rayleigh-Taylor instability of cylindrical jets with radial motion.** Chen, Xiang M. (GE Nuclear, Wilmington, NC (United States)); Schrock, V.E.; Peterson, P.F. Nuclear Regulatory Commission, Washington, DC (United States). Div. of Systems Technology; American Nuclear Society, La Grange Park, IL (United States); American Inst. of Chemical Engineers, New York, NY (United States); American Society of Mechanical Engineers, New York, NY (United States); Canadian Nuclear Society, Toronto, ON (Canada); European Nuclear Society (ENS), Bern (Switzerland); Atomic Energy Society of Japan, Tokyo (Japan); Japan Society of Multiphase Flow, Kyoto (Japan). Sep 1995. (CONF-950904–Vol.2: 7. international meeting on nuclear reactor thermal hydraulics, Saratoga, NY (United States), 10-15 Sep 1995). In *Proceedings of the 7th International Meeting on Nuclear Reactor Thermal-Hydraulics NURETH-7. Volume 2, Sessions 6-11.* 795p. Source: OSTI; NTIS; INIS; GPO.

Rayleigh-Taylor instability of an interface between fluids with different densities subjected to accelleration normal to itself has interested researchers for almost a century. The classic analyses of a flat interface by Rayleigh and Taylor have shown that this type of instability depends on the direction of acceleration and the density differences of the two fluids. Plesset later analyzed the stability of a spherically symmetric flows (and a spherical interface) and concluded that the instability also depends on the velocity of the interface as well as the direction and magnitude of radial acceleration. The instability induced by radial motion in cylindrical systems seems to have been neglected by previous researchers. This paper analyzes the Rayleigh-Taylor type of the spherical case, the radial velocity also plays an important role. As an application, the example of a liquid jet surface in an Inertial Confinement Fusion (ICF) reactor design is analyzed.

31233 (NUREG/CP–0142-Vol.4, pp. 2506-2518) **A formal approach for the prediction of the critical heat flux in subcooled water.** Lombardi, C. (Polytechnic of Milan (Italy)). Nuclear Regulatory Commission, Washington, DC (United States). Div. of Systems Technology; American Nuclear Society, La Grange Park, IL (United States); American Inst. of Chemical Engineers, New York, NY (United States); American Society of Mechanical Engineers, New York, NY (United States); Canadian Nuclear Society, Toronto, ON (Canada); European Nuclear Society (ENS), Bern (Switzerland); Atomic Energy Society of Japan, Tokyo (Japan); Japan Society of Multiphase Flow, Kyoto (Japan). Sep 1995. (CONF-950904–Vol.4: 7. international meeting on nuclear reactor thermal hydraulics, Saratoga, NY (United States), 10-15 Sep 1995). In *Proceedings of the 7th International Meeting on Nuclear Reactor Thermal-Hydraulics NURETH-7. Sessions 17-24.* 825p. Source: OSTI; NTIS; INIS; GPO.

The critical heat flux (CHF) in subcooled water at high mass fluxes are not yet satisfactory correlated. For this scope a formal approach is here followed, which is based on an extension of the parameters and the correlation used for the dryout prediction for medium high quality mixtures. The obtained correlation, in spite of its simplicity and its explicit form, yields satisfactory predictions, also when applied to more conventional CHF data at low-medium mass fluxes and high pressures. Further improvements are possible, if a more complete data bank will be available. The main and general open item is the definition of a criterion, depending only on independent parameters, such as mass flux, pressure, inlet subcooling and geometry, to predict whether the heat transfer crisis will result as a DNB or a dryout phenomenon.

31234 (ORNL/TM–13009) **Particle exhaust of helium plasmas with actively cooled outboard pump limiter on Tore Supra.** Uckan, T. (Oak Ridge National Lab., TN (United States)); Mioduszewski, P.K.; Loarer, T.; Chatelier, M.; Guilhem, D.; Lutz, T.; Nygren, R.E.; Mahdavi, M.A. Oak Ridge National Lab., TN (United States). Aug 1995. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. (CONF-950704–12: 22. European conference on controlled fusion and plasma physics, Bournemouth (United Kingdom), 2-7 Jul 1995). Order Number DE96000177. Source: OSTI; NTIS; INIS; GPO Dep.

The superconducting tokamak Tore Supra was designed for long-pulse (30-s) high input power operation. Here observations on the particle-handling characteristics of the actively cooled modular outboard pump limiter (OPL) are presented for helium discharges. The important experimental result was that a modest pumping speed (1 m^3/s) of the OPL turbomolecular pump (TMP) provided background helium exhaust. This result came about due to a well-conditioned vessel wall with helium discharges that caused no wall outgasing. The particle accountability in these helium discharges was excellent, and the well-conditioned wall did not play a significant role in the particle balance. The helium density control, 25% density drop with OPL exhaust efficiency of ~1%, was possible with TMP although this may not be the case with reactive gases such as deuterium. The observed quadratic increase of the OPL neutral pressure with helium density was consistent with an improvement of the particle control with increasing plasma density.

31235 (SAND–94-3136C) **Cleaning techniques for applied-B ion diodes.** Cuneo, M.E. (and others); Menge, P.R.; Hanson, D.L. Sandia National Labs., Albuquerque, NM (United States). [1995]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-950750–38: 10. Institute of Electrical and Electronics Engineers (IEEE) pulsed power conference, Albuquerque, NM (United States), 10-13 Jul 1995). Order Number DE95017882. Source: OSTI; NTIS; GPO Dep.

Measurements and theoretical considerations indicate that the lithium-fluoride (LiF) lithium ion source operates by electron-assisted field-desorption, and provides a pure lithium beam for

10–20 ns. Evidence on both the SABRE (1 TW) and PBFA-II (20 TW) accelerators indicates that the lithium beam is replaced by a beam of protons, and carbon resulting from electron thermal desorption of hydrocarbon surface and bulk contamination with subsequent avalanche ionization. Appearance of contaminant ions in the beam is accompanied by rapid impedance collapse, possibly resulting from loss of magnetic insulation in the rapidly expanding and ionizing, neutral layer. Electrode surface and source substrate cleaning techniques are being developed on the SABRE accelerator to reduce beam contamination, plasma formation, and impedance collapse. We have increased lithium current density a factor of 3 and lithium energy a factor of 5 through a combination of in-situ surface and substrate coatings, impermeable substrate coatings, and field profile modifications.

31236 (SAND–95-0804C) **Erosion and deposition of metals and carbon in the DIII-D divertor.** Wampler, W.R. (and others); Bastasz, R.; Buchenauer, D. Sandia National Labs., Albuquerque, NM (United States); Sandia Labs., Livermore, CA (United States). [1995]. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000 ; AC03-89ER51114. (CONF-950961–1: 7. international conference on fusion reactor materials, Obninsk (Russian Federation), 25-29 Sep 1995). Order Number DE96000776. Source: OSTI; NTIS; INIS; GPO Dep.

Net erosion rates at the outer strike point of the DIII-D divertor plasma were measured for several materials during quiescent H-mode operation with deuterium plasmas. Materials examined include graphite, beryllium, tungsten, vanadium and molybdenum. For graphite, net erosion rates up to 4 nm/sec were found. Erosion rates for the metals were much smaller than for carbon. Ion fluxes from Langmuir probe measurements were used to predict gross erosion by sputtering. Measured net erosion was much smaller than predicted gross erosion. Transport of metal atoms by the plasma across the divertor surface was also examined. Light atoms were transported farther than heavy atoms as predicted by impurity transport models.

31237 (SAND–95-1693) **Report of a technical evaluation panel on the use of beryllium for ITER plasma facing material and blanket breeder material.** Ulrickson, M.A. (ed.) (Sandia National Labs., Albuquerque, NM (United States)); Manly, W.D.; Dombrowski, D.E. Sandia National Labs., Albuquerque, NM (United States). Aug 1995. 150p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. Order Number DE96000055. Source: OSTI; NTIS; INIS; GPO Dep.

Beryllium because of its low atomic number and high thermal conductivity, is a candidate for both ITER first wall and divertor surfaces. This study addresses the following: why beryllium; design requirements for the ITER divertor; beryllium supply and unirradiated physical/mechanical property database; effects of irradiation on beryllium properties; tritium issues; beryllium health and safety; beryllium-coolant interactions and safety; thermal and mechanical tests; plasma erosion of beryllium; recommended beryllium grades for ITER plasma facing components; proposed manufacturing methods to produce beryllium parts for ITER; emerging beryllium materials; proposed inspection and maintenance techniques for beryllium components and coatings; time table and costs; and the importance of integrating materials and manufacturing personnel with designers.

31238 (UCRL-ID–114972-2, pp. 8, Paper 10) **Beamlet diagnostics.** Theys, M. Lawrence Livermore National Lab., CA (United States). 6 May 1994. (CONF-9405328–Absts.: Science and Engineering Research Semester (SERS) student symposium, Livermore, CA (United States), 6 May 1994). In *SERS intership: Spring 1994 abstracts and research papers*. 195p. Order Number DE95014118. Source: OSTI; NTIS; GPO Dep.

Beamlet is a high power laser currently being built at Lawrence Livermore National Lab as a proof of concept for the National Ignition Facility (NIF). Beamlet is testing several areas of laser advancements, such as a 37cm Pockels cell, square amplifier, and propagation of a square beam. The diagnostics on beamlet tell the operators how much energy the beam has in different locations, the pulse shape, the energy distribution, and other important information regarding the beam. This information is being used to evaluate new amplifier designs, and extrapolate performance to the NIF laser. In my term at Lawrence Livermore National Laboratory I have designed and built a diagnostic, calibrated instruments used on diagnostics, setup instruments, hooked up communication lines to the instruments, and setup computers to control specific diagnostics.

31239 (UCRL-ID–118509) **Update on diode-pumped solid-state laser experiments for inertial fusion energy.** Marshall, C.; Smith, L.; Payne, S. Lawrence Livermore National Lab., CA (United States). 15 Aug 1994. 26p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE95017715. Source: OSTI; NTIS; INIS; GPO Dep.

The authors have completed the initial phase of the diode-pumped solid-state laser (DPSSL) experimental program to validate the expected pumping dynamics and extraction cross-sections of Yb^{3+}-doped $Sr_5(PO_4)_3F$ (Yb:S-FAP) crystals. Yb:S-FAP crystals up to 25 x 25 x 175 mm in size have been grown for this purpose which have acceptable loss characteristics (<1 %/cm) and laser damage thresholds (~20 J/cm^2). The saturation fluence for pumping has been measured to be 2.2 J/cm^2 using three different methods based on either the spatial, temporal, or energy transmission properties of a Yb:S-FAP rod. The small signal gain under saturated pumping conditions was measured. These measurements imply an emission cross section of 6.0×10^{-20} cm^2 that falls within error bars of the previously reported value of 7.3×10^{-20} cm^2, obtained from purely spectroscopic techniques. The effects of radiation trapping on the emission lifetime have been quantified. The long lifetime of Yb:S-FAP has beneficial effects for diode-pumped amplifier designs, relative to materials with equivalent cross sections but shorter lifetimes, in that less peak pump intensity is required (thus lower diode costs) and that lower spontaneous emission rates lead to a reduction in amplified spontaneous emission. Consequently, up to 1.7 J/cm^3 of stored energy density was achieved in a 6x6x44 mm Yb:S-FAP amplifier rod; this stored energy density is large relative to typical flashlamp-pumped Nd:glass values of 0.3 to 0.5 J/cm^3. A 2.4 kW peak power InGaAs diode array has been fabricated by Beach, Emanuel, and co-workers which meets the central wavelength, bandwidth, and energy specifications for the author's immediate experiments. These results further increase their optimism of being able to produce a ~ 10% efficient diode-pumped solid state laser for inertial fusion energy.

31240 (UCRL-ID–120238) **Final report on the LLNL compact torus acceleration project.** Eddleman, J.; Hammer, J.; Hartman, C.; McLean, H.; Molvik, A. Lawrence Livermore National Lab., CA (United States). 19 Mar 1995. 50p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE95017074. Source: OSTI; NTIS; INIS; GPO Dep.

In this report, we summarize recent work at LLNL on the compact torus (CT) acceleration project. The CT accelerator is a novel technique for projecting plasmas to high velocities and reaching high energy density states. The accelerator exploits magnetic confinement in the CT to stably transport plasma over large distances and to directed kinetic energies large in comparison with the CT internal and magnetic energy. Applications range from heating and fueling magnetic fusion devices, generation of intense pulses of x-rays or neutrons for weapons effects and high energy-density fusion concepts.

31241 (UCRL-ID–120758) **Configuring the National Ignition Facility for direct-drive experiments.** Eimerl, D. (ed.). Lawrence Livermore National Lab., CA (United States). Jul 1995. 90p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE95017854. Source: OSTI; NTIS; GPO Dep.

The National Ignition Facility (NIF) is a project whose primary mission is to provide an above-ground experimental capability for maintaining nuclear competence and weapons effects simulation, and to pursue the achievement of fusion ignition utilizing solid state lasers as the energy driver. In this facility a large number of laser beams are focused onto a small target located at the center of a spherical target chamber. The laser energy is delivered in a few billionths of a second, raising the temperature and density of the nuclear materials in the target to levels where significant thermonuclear energy is released. The thermonuclear reaction proceeds very rapidly, so that the target materials remain confined by their own

inertia during the thermonuclear reaction. This type of approach is called inertial confinement fusion (ICF). The proposed project is described in a conceptual design report (CDR) that was released in May 1994. Early in FY95, a collaboration between the University of Rochester and the Lawrence Livermore National Laboratory was established to study reconfiguring the NIF to accommodate direct-drive experiments. The present paper is a report to the scientific community, primarily the scientists and engineers working on the design of the NIF. It represents results from work in progress, specifically work completed by the end of the second quarter FY95. This report has two main sections. The first describes the target requirements on the laser drive, and the second part describes how the NIF laser can be configured to accommodate both indirect and direct drive. The report includes a description of the scientific basis for these conclusions. Though a complete picture does not exist, the present understanding is sufficient to conclude that the primary target requirements and laser functional requirements for indirect and direct drive are quite compatible. It is evidently straightforward to reconfigure the NIF to accommodate direct and indirect drive.

31242 (UCRL-ID–121170) **Parametric fits to 1-D neutron transport calculations for lithium-vanadium fusion power plant blankets in cylindrical and spherical geometries.** Petzoldt, R.W.; Perkins, L.J. Lawrence Livermore National Lab., CA (United States). 16 Jun 1995. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE96001053. Source: OSTI; NTIS; INIS; GPO Dep.

The authors performed 1-D coupled, neutron-gamma transport calculations for lithium-vanadium blankets and lithium-sodium cauldron pot blankets in cylindrical and spherical geometries. Parametric fits to the data are supplied for subsequent use in systems code models. Scaling relationships are given for various neutronics parameters of interest, including: tritium breeding ratio, neutron energy multiplication, magnet dose rates, magnet heating rates, and integrated magnet fluence.

31243 (UCRL-ID–121333) **The origin and evolution of the optics specifications for the National Ignition Facility.** Aikens, D. Lawrence Livermore National Lab., CA (United States). 27 Jun 1995. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE95017898. Source: OSTI; NTIS; GPO Dep.

In the second half of the 1990's, LLNL and others will be designing and beginning construction of the National Ignition Facility (NIF). At more than 10 times the power and size of the Nova laser system, this new laser will be capable of producing the worlds first controlled fusion ignition and burn, completing a vital milestone on the path to Fusion Energy. In order to optimize the performance of the laser system for a minimum cost, the designers have been conducting a campaign to properly specify the optical properties of the more than 7,500 large optical components to be deployed in the NIF. The draft optics specifications derived from this effort will be presented. The evolution of these specifications, both in language and in content, will be discussed, specifically transmitted wavefront (both P-V and PSD), scratch/dig, surface roughness, bubbles and inclusions specifications.

31244 (UCRL-JC–12065) **A numerical study of shock-acceleration of a diffuse helium cylinder.** Greenough, J.A. (and others); Bell, J.; Colella, P. Lawrence Livermore National Lab., CA (United States). Aug 1995. 6p. Sponsored by USDOE, Washington, DC (United States);Department of Defense, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9507152–4: 20. international symposium on shock waves, Pasadena, CA (United States), 24-28 Jul 1995). Order Number DE96001317. Source: OSTI; NTIS; INIS; GPO Dep.

The development of a shock-accelerated diffuse Helium cylindrical inhomogeneity is investigated using a new numerical method. The new algorithm is a higher-order Godunov implementation of the so-called multi-fluid equations. This system correctly models multiple component mixtures by accounting for differential compressibility effects. This base integrator is embedded in an implementation of adaptive mesh refinement (AMR) that allows efficient increase in resolution where the computational effort is concentrated where high accuracy, or increased resolution, are required. Qualitative and quantitative comparison with previous experimental data is excellent. The simulations show that countersign vortex blobs are deposited in the jet core by baroclinic generation of the curved shock wave as it traverses the jet. This vorticity deposition occurs over timescales that scale with the shock passage time ($\sim 10\mu$sec). Three phases of development are identified and characterized. The first is the weak deformation (WD) phase, where there is weak distortion of the Helium jet due to weak vorticity induced velocity effects. The second phase is the strong deformation (SD) phase where there is large distortion for the jet and the vortex blobs due to large induced velocity effects. The last is a relaxation/reorganization (RR) phase where the vorticity field reorganizes into point-like vortex pair.

31245 (UCRL-JC–117365) **Conceptual design of the National Ignition Facility.** Paisner, J.A. (Lawrence Livermore National Lab., CA (United States)); Kumpan, S.A.; Lowdermilk, W.H.; Boyes, J.D.; Sorem, M. Lawrence Livermore National Lab., CA (United States). 2 Aug 1995. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–18: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE96000336. Source: OSTI; NTIS; INIS; GPO Dep.

DOE commissioned a Conceptual Design Report (CDR) for the National Ignition Facility (NIF) in January 1993 as part of a Key Decision Zero (KDO), justification of Mission Need. Motivated by the progress to date by the Inertial Confinement Fusion (ICF) program in meeting the Nova Technical Contract goals established by the National Academy of Sciences in 1989, the Secretary requested a design using a solid-state laser driver operating at the third harmonic (0.35 μm) of neodymium (Nd) glass. The participating ICF laboratories signed a Memorandum of Agreement in August 1993, and established a Project organization, including a technical team from the Lawrence Livermore National Laboratory (LLNL), Los Alamos National Laboratory (LANL), Sandia National Laboratories (SNL), and the Laboratory for Laser Energetics at the University of Rochester. Since then, we completed the NIF conceptual design, based on standard construction at a generic DOE Defense Program's site, and issued a 7,000-page, 27-volume CDR in May 1994.2 Over the course of the conceptual design study, several other key documents were generated, including a Facilities Requirements Document, a Conceptual Design Scope and Plan, a Target Physics Design Document, a Laser Design Cost Basis Document, a Functional Requirements Document, an Experimental Plan for Indirect Drive Ignition, and a Preliminary Hazards Analysis (PHA) Document. DOE used the PHA to categorize the NIF as a low-hazard, non-nuclear facility. On October 21, 1994 the Secretary of Energy issued a Key Decision One (KD1) for the NIF, which approved the Project and authorized DOE to request Office of Management and Budget-approval for congressional line-item FY 1996 NIF funding for preliminary engineering design and for National Environmental Policy Act activities. In addition, the Secretary declared Livermore as the preferred site for constructing the NIF. The Project will cost approximately $1.1 billion and will be completed at the end of FY 2002.

31246 (UCRL-JC–117698-Rev.1) **Contributions of the National Ignition Facility to the development of inertial fusion energy. Revision 1.** Tobin, M. (Lawrence Livermore National Lab., CA (United States)); Logan, G.; Diaz De La Rubia, T.; Schrock, V.; Schultz, K.; Tokheim, R.; Abdou, M.; Bangerter, R. Lawrence Livermore National Lab., CA (United States). Oct 1994. 25p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-940664–37-Rev.1: ISFNT-3: international symposium on fusion nuclear technology, Los Angeles, CA (United States), 27 Jun - 1 jul 1994). Order Number DE95015035. Source: OSTI; NTIS; INIS; GPO Dep.

The Department of Energy is proposing to construct the National Ignition Facility (NIF) to embark on a program to achieve ignition and modest gain in the laboratory early in the next century. The NM will use a $\geq$1.8-MJ, 0.35-mm laser with 192 independent beams, a fifty-fold increase over the energy of the Nova laser. System performance analyses suggest yields as great as 20 MJ may be achievable. NIF will conduct more than 600 shots per year. The

benefits of a micro-fusion capability in the laboratory include: Essential contributions to defense programs, resolution of important Inertial Fusion Energy issues, and unparalleled conditions of energy density for basic science and technology research. We have begun to consider the role the National Ignition Facility will fill in the development of Inertial Fusion Energy. While the achievement of ignition and gain speaks for itself in terms of its impact on developing IFE, we believe there are areas of IFE development, such as fusion power technology, IFE target design and fabrication, and understanding chamber dynamics, that would significantly benefit from NIF experiments. In the area of IFE target physics, ion targets will be designed using the NIF laser, and feasibility of high gain targets will be confirmed. Target chamber dynamics experiments will benefit from x-ray and debris energies that mimic in-IFE-chamber conditions. Fusion power technology will benefit from using single-shot neutron yields to measure spatial distribution of neutron heating, activation, and tritium breeding in relevant materials. IFE target systems will benefit from evaluating low-cost target fabrication techniques by testing such targets on NIF.

31247 (UCRL-JC–117814) **Time-resolved x-ray imaging of high-power laser-irradiated under-dense silica aerogels and agar foams.** Koch, J.A. (and others); Estabrook, K.G.; Bauer, J.D. Lawrence Livermore National Lab., CA (United States). Aug 1995. 50p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-941101–14: Meeting of the Division of Plasma Physics of the American Physical Society, Minneapolis, MN (United States), 7-11 Nov 1994). Order Number DE95017846. Source: OSTI; NTIS; GPO Dep.

This paper presents the results of experiments in which a high-power laser was used to irradiate low density (4 - 9 mg/cm^3) silica aerogel and agar foam targets. The laser-solid interaction and energy transport through the material were monitored with time-resolved imaging diagnostics, and the data show the production and propagation of an x-ray emission front in the plasma. The emission-front trajectory data are found to be in significant disagreement with detailed simulations, which predict a much more rapid heating of the cold material, and the data suggest that this discrepancy is not explainable by target inhomogeneities. Evidence suggests that energy transport into the cold material may be dominated by thermal conduction; however, no completely satisfactory explanation for the discrepancies is identified, and further experimental and theoretical research is necessary in order to resolve this important problem in laser-plasma interaction physics.

31248 (UCRL-JC–118659) **Open-ended magnetic confinement systems for fusion.** Post, R.F.; Ryutov, D.D. Lawrence Livermore National Lab., CA (United States). May 1995. 43p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9411182–3: 1. international symposium for evaluation of current trends in fusion research, Washington, DC (United States), 14-18 Nov 1994). Order Number DE95016051. Source: OSTI; NTIS; INIS; GPO Dep.

Magnetic confinement systems that use externally generated magnetic fields can be divided topologically into two classes: "closed" and 'open". The tokamak, the stellarator, and the reversed-field-pinch approaches are representatives of the first category, while mirror-based systems and their variants are of the second category. While the recent thrust of magnetic fusion research, with its emphasis on the tokamak, has been concentrated on closed geometry, there are significant reasons for the continued pursuit of research into open-ended systems. The paper discusses these reasons, reviews the history and the present status of open-ended systems, and suggests some future directions for the research.

31249 (UCRL-JC–119019) **The National Ignition Facility front-end laser system.** Burkhart, S.C.; Beach, R.J.; Crane, J.H.; Davin, J.M.; Perry, M.D.; Wilcox, R.B. Lawrence Livermore National Lab., CA (United States). 7 Jul 1995. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–30: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE96000725. Source: OSTI; NTIS; INIS; GPO Dep.

The proposed National Ignition Facility is a 192 beam Nd:glass laser system capable of driving targets to fusion ignition by the year 2005. A key factor in the flexibility and performance of the laser is a front-end system which provides a precisely formatted beam to each beamline. Each of the injected beams has individually controlled energy, temporal pulseshape, and spatial shape to accommodate beamline-to-beamline variations in gain and saturation. This flexibility also gives target designers the options for precisely controlling the drive to different areas of the target. The design of the Front-End laser is described, and initial results are discussed.

31250 (UCRL-JC–119359) **Transport of a partially-neutralized ion beam in a heavy-ion fusion reactor chamber.** Callahan, D.A.; Langdon, A.B. Lawrence Livermore National Lab., CA (United States). 25 Apr 1995. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-950512–297: Particle accelerator conference, Dallas, TX (United States), 1-5 May 1995). Order Number DE95015420. Source: OSTI; NTIS; INIS; GPO Dep.

In a heavy-ion driven, inertial confinement fusion power plant, a space-charge dominated beam of heavy ions must be transported through a reactor chamber and focused on a 2-3 mm spot at the target. The spot size at the target is determined by the beam emittance and space charge, plus chromatic aberrations in the focusing lens system and errors in aiming the beam. The gain of the ICF capsule depends on the focal spot size. We are investigating low density, nearly-ballistic transport using an electromagnetic, r-z particle-in-cell code. Even at low density ($n \approx 5 \times 10^{13}$ cm^{-3}), beam stripping may be important. To offset the effects of stripping and reduce the space charge, the beam is partially charge neutralized via a pre-formed plasma near the chamber entrance. Additional electrons for charge neutralization come from ionization of the background gas by the beam. Simulations have shown that stripping can greatly increase the spot size; however, partial neutralization can offset most of this increase.

31251 (UCRL-JC–119538) **Progress toward a prototype recirculating induction accelerator for heavy-ion fusion.** Friedman, A. (Lawrence Livermore National Lab., CA (United States)); Barnard, J.J.; Cable, M.D. Lawrence Livermore National Lab., CA (United States); Lawrence Berkeley Lab., CA (United States). 28 Apr 1995. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48 ; AC03-76SF00098. (CONF-950512–332: Particle accelerator conference, Dallas, TX (United States), 1-5 May 1995). Order Number DE96000379. Source: OSTI; NTIS; INIS; GPO Dep.

The US Inertial Fusion Energy (IFE) Program is developing induction accelerator technology toward the goal of electric power production using Heavy-Ion beam-driven inertial Fusion (HIF). The recirculating induction accelerator promises driver cost reduction by repeatedly passing the beam through the same set of accelerating and focusing elements. The authors present plans for and progress, toward a small (4.5-m diameter) prototype recirculator which will accelerate K^+ ions through 15 laps, from 80 to 320 keV and from 2 to 8 mA. Beam confinement is effected via permanent-magnet quadrupoles; bending is via electric dipoles. Scaling laws, and extensive particle and fluid simulations of the space-charge dominated beam behavior, have been used to arrive at the design. An injector and matching section are operational. Initial experiments are investigating intense-beam transport in a linear magnetic channel; near-term plans include studies of transport around a bend. Later experiments will study, insertion/extraction and acceleration with centroid control.

31252 (UCRL-JC–119539) **Development of beam position monitors for heavy ion recirculators.** Deadrick, F.J. (Lawrence Livermore National Lab., CA (United States)); Barnard, J.J.; Fessenden, T.J.; Meridith, J.W.; Rintamaki, J. Lawrence Livermore National Lab., CA (United States). 25 Apr 1995. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-950512–338: Particle accelerator conference, Dallas, TX (United States), 1-5 May 1995). Order Number DE96001319. Source: OSTI; NTIS; INIS; GPO Dep.

Work is underway at the Lawrence Livermore National Laboratory to design and build a small-scale, heavy ion recirculating induction accelerator. An essential part of this design work is the development of small nonintercepting diagnostics to measure beam current and position. This paper describes some of this work, with

particular emphasis on the development of a small capacitive probe beam position monitor to resolve beam position to the 100 μm level in a 6 cm diameter beam pipe. Initial measured results with an 80 keV potassium ion beam are presented.

31253 (UCRL-JC–119579) **Three dimensional simulations of a small induction recirculator accelerator.** Grote, D.P. (Lawrence Livermore National Lab., CA (United States)); Friedman, A.; Haber, I. Lawrence Livermore National Lab., CA (United States). 24 Apr 1995. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-950512–339: Particle accelerator conference, Dallas, TX (United States), 1-5 May 1995). Order Number DE96001318. Source: OSTI; NTIS; INIS; GPO Dep.

A recirculating induction accelerator has potential cost advantages for a heavy-ion fusion driver. In order to explore the physics and technological issues, a small prototype recirculator is being built. The three dimensional particle-in-cell code, WARP3d, is being used in the design and analysis of the experiments. WARP3d is used to examine the behavior of the beam in the electric dipoles and in the non-linear fields associated with the accelerator lattice elements. The dipoles have focusing and fringe fields which can adversely affect the beam quality. Both single particle and full beam dynamics are examined in the dipoles using realistic geometries. Dipole plate designs which minimize the adverse effects are described. The non-linear fields associated with the permanent magnetic quadrupoles have been included in the simulations. They were found to have little effect on the quality of the beam.

31254 (UCRL-JC–119583) **Mechanical design of recirculating accelerator experiments for heavy-ion fusion.** Karpenko, V. Lawrence Livermore National Lab., CA (United States). 23 May 1995. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-950512–331: Particle accelerator conference, Dallas, TX (United States), 1-5 May 1995). Order Number DE95017878. Source: OSTI; NTIS; INIS; GPO Dep.

Recirculating induction accelerators have been studied as a potential low cost driver for inertial fusion energy. At LLNL, we are developing a small (4.5-m diameter), scaled, experimental machine which will demonstrate many of the engineering solutions of a full scale driver. The small recirculator will accelerate singly ionized potassium ions from 80 to 320 keV and 2 to 8 mA, using electric dipoles for bending and permanent magnet quadrupoles for focusing in a compact periodic lattice. *While very compact, and low cost, this design allows the investigation of most of the critical physics issues associated with space-charge-dominated beams in future IFE power plant drivers.* This report describes the recirculator, its mechanical design, its vacuum design, and the process for aligning it. Additionally, a straight magnetic transport experiment is being carried out to test diagnostics and magnetic transport in preparation for the recirculator.

31255 (UCRL-JC–120175) **Precision Nova operations.** Ehrlich, R.B.; Miller, J.L.; Saunders, R.L.; Thompson, C.E.; Weiland, T.L.; Laumann, C.W. Lawrence Livermore National Lab., CA (United States). [1995]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–19: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE95017855. Source: OSTI; NTIS; GPO Dep.

To improve the symmetry of x-ray drive on indirectly driven ICF capsules, we have increased the accuracy of operating procedures and diagnostics on the Nova laser. Precision Nova operations includes routine precision power balance to within 10% rms in the "foot" and 5% nns in the peak of shaped pulses, beam synchronization to within 10 ps rms, and pointing of the beams onto targets to within 35 μm rms. We have also added a "fail-safe chirp" system to avoid Stimulated Brillouin Scattering (SBS) in optical components during high energy shots.

31256 (UCRL-JC–120184) **Modeling of microencapsulated polymer shell solidification.** Boone, T. (Soane Technologies, Inc., Hayward, CA (United States)); Cheung, L.; Nelson, D.; Soane, D.; Wilemski, G.; Cook, R. Lawrence Livermore National Lab., CA (United States); Soane Technologies, Inc., Hayward, CA (United States). 8 Mar 1995. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48 ; AC03-91SF18601. (CONF-941144–173: 1994 fall meeting of the Materials Research Society (MRS), Boston, MA (United States), 28 Nov - 2 dec 1994). Order Number DE96000377. Source: OSTI; NTIS; INIS; GPO Dep.

A finite element transport model has been developed and implemented to complement experimental efforts to improve the quality of ICF target shells produced via controlled-mass microencapsulation. The model provides an efficient means to explore the effect of processing variables on the dynamics of shell dimensions, concentricity, and phase behavior. Comparisons with experiments showed that the model successfully predicts the evolution of wall thinning and core/wall density differences. The model was used to efficiently explore and identify initial wall compositions and processing temperatures which resulted in concentricity improvements from 65 to 99%. The evolution of trace amounts of water entering into the shell wall was also tracked in the simulations. Comparisons with phase envelope estimations from modified UNIFAP calculations suggest that the water content trajectory approaches the two-phase region where vacuole formation via microphase separation may occur.

31257 (UCRL-JC–120185) **High efficiency gratings for beam steering on the National Ignition Facility (NIF) laser.** Perry, M.D.; Dixit, S.N.; Shore, B.W.; Boyd, R.D.; Britten, J.A.; Powell, H.T. Lawrence Livermore National Lab., CA (United States). 26 May 1995. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–3: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE95016630. Source: OSTI; NTIS; GPO Dep.

The design of the National Ignition Facility (NIF) is based on conversion of 1.05 μm wavelength light (1ω) into third harmonic light (3ω) by passage through KDP frequency conversion crystals. It is important for proper coupling of radiation into the targets that the final beam impinging upon the target should have little 1ω or 2ω light. It is also desirable to avoid direct line-of sight for neutrons between the target and the KDP crystals, in order to prevent damage. These issues can be overcome by employing diffraction gratings immediately before the final NIF focusing lens to direct the 3ω beam to the target. A single grating design is highly dispersive, and may introduce intolerable divergence into the beam. In order to overcome this limitation, we propose to use a grating pair. This will provide transverse offset of the beam and eliminate the dispersion while offering several other advantages.

31258 (UCRL-JC–120189) **Diffractive coherence in multilayer dielectric gratings.** Shore, B.W. (Lawrence Livermore National Lab., CA (United States)); Feit, M.D.; Perry, M.D.; Boyd, R.D.; Britten, J.A.; Li, Lifeng. Lawrence Livermore National Lab., CA (United States). 26 May 1995. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9506238–1: 7. Rochester conference on coherence and quantum optics, Rochester, NY (United States), 7-10 Jun 1995). Order Number DE95016611. Source: OSTI; NTIS; GPO Dep.

Successful operation of large-scale high-power lasers, such as those in use and planned at LLNL and elsewhere, require optical elements that can withstand extremely high fluences without suffering damage. Of particular concern are dielectric diffraction gratings used for beam sampling and pulse compression. Laser induced damage to bulk dielectric material originates with coupling of the electric field of the radiation to bound electrons, proceeding through a succession of mechanisms that couple the electron kinetic energy to lattice energy and ultimately to macroscopic structural changes (e.g. melting). The constructive interference that is responsible for the diffractive behavior of a grating or the reflective properties of a multilayer dielectric stack can enhance the electric field above values that would occur in unstructured homogeneous material. Much work has been done to model damage to bulk matter. The presence of nonuniform electric fields, resulting from diffractive coherence, has the potential to affect damage thresholds and requires more elaborate theory. We shall discuss aspects of work directed towards understanding the influence of dielectric structures upon damage, with particular emphasis on computations and interpretation of electric fields within dielectric gratings and

multilayer dielectric stacks, noting particularly the interference effects that occur in these structures.

31259 (UCRL-JC–120203) **Full aperture laser conditioning of multilayer mirrors and polarizers.** Sheehan, L.; Kozlowski, M.; Tench, B. Lawrence Livermore National Lab., CA (United States). 26 May 1995. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–6: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE95016628. Source: OSTI; NTIS; GPO Dep.

The Inertial Confinement Fusion (ICF) program at LLNL is beginning the design of a 1.8 Megajoule, 0.35-μm, laser system called the National Ignition Facility (NIF). In order to reduce cost, and increase performance, high damage threshold optics are essential. As a result of damage initiating defects, only a small percentage of current as-deposited optical coatings can meet the required damage threshold specification. Work has been conducted in the area of understanding the causes of these nodular defects and how they are related to laser damage. While it is not yet possible to produce defect-free coatings, it has been found that the damage threshold of some coatings can be increased by as much as 2 or more times as a result of pre-illumination at incrementally increasing fluences. This process, termed laser conditioning, has been associated with the ejection of the damage-initiating defects. With current damage thresholds, mirrors and polarizers for the NIF will have to be laser conditioned in order to meet the laser requirements for fluence propagation. LLNL has constructed a system dedicated to laser conditioning of meter-sized HfO_2/SiO_2 multilayer polarizers and mirrors. The optic is moved in a raster pattern through a stationary 10-Hz rep-rated, 1.064 μm beam with 10-ns pulses. A scatter measurement diagnostic allows on-the-fly evaluation of laser-induced damage during a scan. This system has been used to laser condition optics as large as 73 cm x 37 cm. Such optics are now being used on the Beamlet laser system at LLNL. A description of the conditioning process, its effect on the optic, and an analysis of its application to large areas is presented.

31260 (UCRL-JC–120213) **Neutron and gamma irradiated optical property changes for the final optics of the National Ignition Facility.** Marshall, C.D.; Speth, J.A.; DeLoach, L.D.; Payne, S.A. Lawrence Livermore National Lab., CA (United States). 17 Jul 1995. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–20: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE96000075. Source: OSTI; NTIS; INIS; GPO Dep.

Based on studies the authors have performed with several radiation sources such as pulsed nuclear reactors, they have been able to construct a physical picture and measure quantitative parameters necessary to model the radiation-induced losses expected for fused silica and fused quartz National Ignition Facility (NIF) target area. It is important to note that these surrogate radiation sources do not have identical temporal and spectral characteristics to NIF, therefore caution is in order since the results obtained to date must be extrapolated somewhat to predict NIF performance.

31261 (UCRL-JC–120220) **Thermal management in inertial fusion energy slab amplifiers.** Sutton, S.B.; Albrecht, G.F. Lawrence Livermore National Lab., CA (United States). 17 Jul 1995. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–24: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE96000099. Source: OSTI; NTIS; INIS; GPO Dep.

As the technology associated with the development of solid-state drivers for inertial fusion energy (IFE) has evolved, increased emphasis has been placed on the development of an efficient approach for managing the waste heat generated in the laser media. This paper addresses the technical issues associated with the gas cooling of large aperture slabs, where the laser beam propagates through the cooling fluid. It is shown that the major consequence of proper thermal management is the introduction of simple wedge, or beam steering, into the system. Achieving proper thermal management requires careful consideration of the geometry, cooling fluid characteristics, cooling flow characteristics, as well as the thermal/mechanical/optical characteristics of the laser media. Particularly important are the effects of cooling rate variation and turbulent scattering on the system optical performance. Helium is shown to have an overwhelming advantage with respect to turbulent scattering losses. To mitigate cooling rate variations, the authors introduce the concept of flow conditioning. Finally, optical path length variations across the aperture are calculated. A comparison of two laser materials (S-FAP and YAG) shows the benefit of a nearly a-thermal material on optical variations in the system.

31262 (UCRL-JC–120364) **Normal-zone detection in tokamak superconducting magnets with Co- wound voltage sensors.** Martovetsky, N.N.; Chaplin, M.R. Lawrence Livermore National Lab., CA (United States). 8 Jun 1995. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-950691–14: 14. international conference on magnet technology, Tampere (Finland), 11-16 Jun 1995). Order Number DE95014940. Source: OSTI; NTIS; GPO Dep.

This paper discusses advantages and disadvantages of different locations of co-wound voltage sensors for quench detection in tokamak magnets with a cable-in-conduit conductor. The voltage sensor locations are analyzed and estimates of the anticipated noise vs. dB/dt are derived for transverse, parallel, and self fields. The LLNL Noise Rejection Experiment, also described here, is designed to verify theoretical expectations on a copper cable exposed to these fields that will simulate the tokamak field environment.

31263 (UCRL-JC–120520) **Laser chain alignment with low power local light sources.** Bliss, E.S.; Feldman, M.; Murray, J.E.; Vann, C.S. Lawrence Livermore National Lab., CA (United States). 7 Jul 1995. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–16: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE96000091. Source: OSTI; NTIS; GPO Dep.

Timely and repeatable alignment of the 192 beam National Ignition Facility (NIF) laser will require an automatic system. Demanding accuracy requirements must be met with high reliability at low cost while minimizing the turnaround time between shots. We describe an approach for internally self-consistent alignment of the mirrors in the laser chains using a network of local light sources that serve as near field and far field alignment references. It incorporates a minimum number of alignment lasers, handles many beams in parallel, and utilizes simple control algorithms.

31264 (UCRL-JC–120707) **Low efficiency gratings for 3rd harmonic diagnostics applications.** Britten, J.A.; Boyd, R.D.; Perry, M.D.; Shore, B.W.; Thomas, I.M. Lawrence Livermore National Lab., CA (United States). 9 Aug 1995. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–15: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE96000339. Source: OSTI; NTIS; INIS; GPO Dep.

The baseline design of the National Ignition Facility (NIF) calls for sampling gratings to provide third-harmonic energy diagnostics in the highly constrained area of the target chamber. These 40 x 40 cm transmission gratings are to diffract at (order +1) nominally 0.3% of the incident 351 run light at a small angle on to a focusing mirror and into a calorimeter. The design calls for a plane grating of 500 lines/mm, and approximately 30 run deep, etched into a fused silica focusing lens and subsequently overcoated with a sol-gel anti reflective coating. Gratings of similar aperture and feature size have been produced for other applications by ion etching processes, but, in an effort to reduce substantially the cost of such optics, we are studying the feasibility of making these gratings by wet chemical etching techniques. Experimentation with high-quality fused silica substrates on 5 and 15 cm. scale has led to a wet etching process which can meet the design goals and which offers no significant scaleup barriers to full sized optics. The grating is produced by holographic exposure and a series of processing steps using only a photoresist mask and a final hydrofluoric acid etch. Gratings on 15 cm diameter test substrates exhibit absolute diffraction efficiencies from 0.2–0.4% with a standard deviation of about 15% of the mean over the full aperture. The efficiency

variation is due to variation in linewidth caused by spatial nonuniformities in exposure energy. Uniformity improvements can be realized by using a smaller, more uniform portion of the exposure beam and exposing for longer times. The laser damage threshold for these gratings has been measured at LLNL and found to be identical to that of the fused silica substrate.

31265 (UCRL-JC–120767) **A database of wavefront measurements for laser system modeling, optical component development and fabrication process qualification.** Wolfe, C.R.; Lawson, J.K.; Aikens, D.M.; English, R.E. Lawrence Livermore National Lab., CA (United States). 12 Apr 1995. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9507174–1: Interferometry VII applications, Tucson, AZ (United States), 14 Jul 1995). Order Number DE96000386. Source: OSTI; NTIS; INIS; GPO Dep.

In the second half of the 1990's, LLNL and others anticipate designing and beginning construction of the National Ignition Facility (NIF). The NIF will be capable of producing the worlds first laboratory scale fusion ignition and burn reaction by imploding a small target. The NIF will utilize approximately 192 simultaneous laser beams for this purpose. The laser will be capable of producing a shaped energy pulse of at least 1.8 million joules (MJ) with peak power of at least 500 trillion watts (TV). In total, the facility will require more than 7,000 large optical components. The performance of a high power laser of this kind can be seriously degraded by the presence of low amplitude, periodic modulations in the surface and transmitted wavefronts of the optics used. At high peak power, these phase modulations can convert into large intensity modulations by non-linear optical processes. This in turn can lead to loss in energy on target via many well known mechanisms. In some cases laser damage to the optics downstream of the source of the phase modulation can occur. The database described here contains wavefront phase maps of early prototype optical components for the NIF. It has only recently become possible to map the wavefront of these large aperture components with high spatial resolution. Modern large aperture static fringe and phase shifting interferometers equipped with large area solid state detectors have made this possible. In a series of measurements with these instruments, wide spatial bandwidth can be detected in the wavefront.

31266 (UCRL-JC–120780) **Damage and fracture in large aperture, fused silica, vacuum spatial filter lenses.** Campbell, J.H.; Edwards, G.J.; Marion, J.E. Lawrence Livermore National Lab., CA (United States). 7 Jul 1995. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–21: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE96000076. Source: OSTI; NTIS; INIS; GPO Dep.

Optical damage that results in large scale fracture has been observed in the large, high-fluence, fused-silica, spatial filter lenses on the Nova and Beamlet lasers. In nearly all cases damage occurs on the vacuum side of the lenses and because the vacuum side of the lens is under tensile stress this damage can lead to catastrophic crack growth if the flaw (damage) size exceeds the critical flaw size for SiO_2. The damaged 52 cm Nova lenses fracture into two and sometimes three large pieces. Although under full vacuum load at the time they fracture, the Nova lenses do not implode. Rather the authors have observed that the pieces lock together and air slowly leaks into the vacuum spatial filter housing through the lens cracks. The Beamlet lenses have a larger aspect ratio and peak tensile stress than Nova. The peak tensile stress at the center of the output surface of the Beamlet lens is 1,490 psi versus 810 psi for Nova. During a recent Beamlet high energy shot, a damage spot on the lens grew to the critical flaw size and the lens imploded. Post shot data indicate the lens probably fractured into 5 to 7 pieces, however, unlike Nova, these pieces did not lock together. Analysis shows that the likely source of damage is contamination from pinhole blow-off or out-gassing of volatile materials within the spatial filter. Contamination degrades the antireflection properties of the sol-gel coating and reduces its damage threshold. By changing the design of the Beamlet lens it may be possible to insure that it fails safe by locking up in much that same manner as the Nova lens.

31267 (UCRL-JC–120887) **Can solid-state laser technology serve usefully beyond fusion ignition facilities?** Payne, S.A.; Powell, H.T.; Krupke, W.F. Lawrence Livermore National Lab., CA (United States). 28 Jul 1995. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–14: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE96000340. Source: OSTI; NTIS; INIS; GPO Dep.

We have explored the major technical and conceptual issues relating to the suitability of a diode-pumped solid state laser as a driver for an inertial fusion energy power plant. While solid state lasers have long served as the workhorse of inertial confinement fusion physics studies, the deployment of a driver possessing adequate efficiency, reliability, and repetition rate for inertial fusion energy requires the implementation of several technical innovations discussed in this article.

31268 (UCRL-JC–121125) **Parasitic pencil beams caused by lens reflections in laser amplifier chains.** Murray, J.E. (and others); Van Wonterghem, B.; Seppala, L. Lawrence Livermore National Lab., CA (United States). 7 Jul 1995. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–17: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE96000092. Source: OSTI; NTIS; GPO Dep.

Reflections from lens surfaces create parasitic beams that can damage optics in high-powered laser systems. These parasitic beams are low in energy initially, because of the low reflectivity of antireflection (AR) coated lens surfaces and because they are clipped by spatial filter pinholes, but subsequent amplification can raise them to damage fluence levels. Also, some of the pencil beams in multipass laser systems become pre-pulses at the output by by-pass one of more of the passes, arriving at the output ahead of the main pulse in time. They are insidious because pencil beams that are not initially a problem can become so due to a slow degradation of the AR coatings. Both the Nova and Beamlet laser systems at LLNL have had optics damaged by pencil beams. The best solution for pencil beams is to tip the lenses far enough to eliminate them altogether. This will be the approach taken for the National Ignition Facility (NIF).

31269 (UCRL-JC–121127) **Continuous contour phase plates for tailoring the focal plane irradiance profile.** Dixit, S.N.; Rushford, M.C.; Thomas, I.M.; Perry, M.D. Lawrence Livermore National Lab., CA (United States). 9 Aug 1995. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–13: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE96000341. Source: OSTI; NTIS; INIS; GPO Dep.

We present fully continuous phase screens for producing super-Gaussian focal-plane irradiance profiles. Such phase screens are constructed with the assumption of either circular symmetric near-field and far-field profiles or a separable phase screen in Cartesian co-ordinates. In each case, the phase screen is only a few waves deep. Under illumination by coherent light, such phase screens produce high order super-Gaussian profiles in the focal plane with high energy content effects of beam aberrations on the focal profiles and their energy content are also discussed.

31270 (UCRL-JC–121128) **Electric field enhancement in metallic and multilayer dielectric gratings.** Shore, B.W. (Lawrence Livermore National Lab., CA (United States)); Feit, M.D.; Perry, M.D.; Boyd, R.D.; Britten, J.A.; Li, Lifeng. Lawrence Livermore National Lab., CA (United States). 26 May 1995. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–4: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE95016608. Source: OSTI; NTIS; INIS; GPO Dep.

Successful operation of large-scale high-power lasers, such as those in use and planned at LLNL and elsewhere, require optical elements that can withstand extremely high fluences without suffering damage. Of particular concern are gratings used for pulse

compression. Laser induced damage to bulk dielectric material originates with coupling of the electric field of the radiation to bound electrons, proceeding through a succession of mechanisms that couple the electron kinetic energy to lattice energy and ultimately to macroscopic structural changes (e.g. fracture, melting, ablation, etc.). The constructive interference that is responsible for the diffractive behavior of a grating or the reflective properties of a multilayer dielectric stack can enhance the electric field above values that would occur in unstructured homogeneous material. The presence of nonuniform electric fields, resulting from diffractive coherence, has the potential to affect damage thresholds We describe aspects of LLNL work directed towards understanding the influence of dielectric structures upon damage, with particular emphasis on electric fields within multilayer dielectric stacks.

31271 (UCRL-JC–121148) **The measurement and analysis of wavefront structure from large aperture ICF optics.** Wolfe, C.R.; Lawson, J.K. Lawrence Livermore National Lab., CA (United States). 30 May 1995. 25p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–2: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE95016609. Source: OSTI; NTIS; INIS; GPO Dep.

This paper discusses the techniques, developed over the past year, for high spatial resolution measurement and analysis of the transmitted and/or reflected wavefront of large aperture ICF optical components. Parts up to 400 mm x 750 mm have been measured and include: laser slabs, windows, KDP crystals and lenses. The measurements were performed using state-of-the-art commercial phase shifting interferometers at a wavelength of 633 μm. Both 1 and 2-D Fourier analysis have been used to characterize the wavefront; specifically the Power Spectral Density, (PSD), function was calculated. The PSDs of several precision optical components will be shown. The PSD(V) is proportional to the (amplitude)^2 of components of the Fourier frequency spectrum. The PSD describes the scattered intensity and direction as a function of scattering angle in the wavefront. The capability of commercial software is limited to 1-D Fourier analysis only. We are developing our own 2-D analysis capability in support of work to revise specifications for NIF optics. 2-D analysis uses the entire wavefront phase map to construct 2D PSD functions. We have been able to increase the signal-to-noise relative to 1-D and can observe very subtle wavefront structure.

31272 (UCRL-JC–121180) **Plasma electrode pockels cell for ICF lasers.** Rhodes, M.A.; Boley, C.D.; Tarditi, A.G.; Bauer, B.S. Lawrence Livermore National Lab., CA (United States). 7 Jul 1995. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–22: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE96000726. Source: OSTI; NTIS; INIS; GPO Dep.

In a plasma-electrode Pockels cell (PEPC), plasma discharges serve as transparent electrodes on each side of, an electrooptic crystal such as KDP. These plasmas facilitate rapid and uniform charging and discharging of the crystal. The authors describe PEPC technology deployed on Beamlet and envisioned for the National Ignition Facility. Performance on Beamlet is discussed in detail. They also discuss models which have shed light on PEPC operation. These models describe both the high-voltage sheath that forms near the crystal surface and the characteristics of the bulk plasma column.

31273 (UCRL-JC–121195) **Illumination uniformity requirements for direct drive inertial confinement fusion.** Rothenberg, J.E.; Eimerl, D.; Key, M.H.; Weber, S.V. Lawrence Livermore National Lab., CA (United States). 11 Jul 1995. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–23: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE96000074. Source: OSTI; NTIS; INIS; GPO Dep.

The requirements for laser uniformity are discussed in terms of the ℓ-mode spectrum. It is shown that the choice of smoothing methods can significantly alter this spectrum and that this choice should be made in the context of the target physics. Although two dimensional smoothing by spectral dispersion yields a high quality near field beam profile, it results in poor smoothing for low spatial frequency. The partially coherent light method (fiber smoothing) leads to superior smoothing at low spatial frequencies, but has very poor near field beam quality. As a result, it may be desirable to use partially coherent light during the driver pulse foot (at low intensity and when minimizing the laser imprint is critical) and smoothing by spectral dispersion during the main pulse.

31274 (UCRL-JC–121198) **Two dimensional beam smoothing by spectral dispersion for direct drive inertial confinement fusion.** Rothenberg, J.E. Lawrence Livermore National Lab., CA (United States). 11 Jul 1995. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–26: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE96000093. Source: OSTI; NTIS; INIS; GPO Dep.

Two dimensional smoothing by spectral dispersion is analyzed by using diffraction theory calculations. It is shown that by using standard frequency modulated light one can obtain bandwidth limited smoothing over integration times relevant to inertial confinement fusion (about 1 nsec) with modest induced beam divergence. At longer integration times one can obtain bandwidth limited smoothing by increasing the divergence and/or by using more advanced phase modulation methods.

31275 (UCRL-JC–121271) **Configuring NIF for direct drive experiments.** Eimerl, D. (and others); Rothenberg, J.; Key, M. Lawrence Livermore National Lab., CA (United States). 11 Jul 1995. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–27: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE96000094. Source: OSTI; NTIS; INIS; GPO Dep.

The National Ignition Facility (NIF) is a proposed 1.8 MJ laser facility for carrying out experiments in inertial confinement fusion, currently designed for indirect drive experiments. The direct drive approach is being pursued at the 30 kJ Omega facility at the University of Rochester. In this paper we discuss the modifications to the NIF laser that would be required for both indirect and direct drive experiments. A primary concern is the additional cost of adding direct drive capability to the facility.

31276 (UCRL-JC–121281) **Effects of space charge in beams for heavy ion fusion.** Sharp, W.M.; Friedman, A.; Grote, D.P. Lawrence Livermore National Lab., CA (United States). 1 Sep 1995. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9509149–2: International symposium on heavy ion inertial fusion, Princeton, NJ (United States), 6-9 Sep 1995). Order Number DE96000753. Source: OSTI; NTIS; INIS; GPO Dep.

A new analytic model is presented that accurately estimates the radially averaged axial component of the space-charge field of an axisymmetric heavy-ion beam in a cylindrical beam pipe. The model recovers details of the field near the beam ends that are overlooked by simpler models, and the results compare well to exact solutions of Poisson's equation. Field values are shown for several simple beam profiles and are compared with values obtained from simpler models. The model has been implemented in the fluid/envelope code CIRCE and used to study longitudinal confinement in beams with a variety of axial profiles. The effects of errors in the longitudinal-control fields are presented.

31277 (UCRL-JC–121286) **Angular biasing in implicit Monte-Carlo.** Zimmerman, G.B. Lawrence Livermore National Lab., CA (United States). 20 Oct 1994. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9410254–9: Nuclear explosives code developers conference (NECDC), Las Vegas, NV (United States), 27 Oct 1994). Order Number DE95017862. Source: OSTI; NTIS; INIS; GPO Dep.

Calculations of indirect drive Inertial Confinement Fusion target experiments require an integrated approach in which laser irradiation and radiation transport in the hohlraum are solved simultaneously with the symmetry, implosion and burn of the fuel

capsule. The Implicit Monte Carlo method has proved to be a valuable tool for the two dimensional radiation transport within the hohlraum, but the impact of statistical noise on the symmetric implosion of the small fuel capsule is difficult to overcome. We present an angular biasing technique in which an increased number of low weight photons are directed at the imploding capsule. For typical parameters this reduces the required computer time for an integrated calculation by a factor of 10. An additional factor of 5 can also be achieved by directing even smaller weight photons at the polar regions of the capsule where small mass zones are most sensitive to statistical noise.

31278 (UCRL-JC–121452) **Perturbation theory for frequency doubling and tripling of electric field amplitude and phase ripples.** Auerbach, J.M. (Lawrence Livermore National Lab., CA (United States)); Eimerl, D.; Hunt, J.T.; Milam, D.; Trenholme, J.B.; Milonni, P.W. Lawrence Livermore National Lab., CA (United States). 27 Jun 1995. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–11: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE95015984. Source: OSTI; NTIS; INIS; GPO Dep.

A perturbation theory has been developed to calculate the transfer of electric field amplitude and phase ripples from the first harmonic to either the second harmonic or the third harmonic. The theory is restricted to steady-state conversion processes. In the case of small phase gradients, the real and imaginary parts of the output harmonic ripple are related to the real and imaginary parts of the input perturbation by a 2 × 2 matrix. To confirm the validity of the perturbation theory, we have performed an initial set of experiments on the Optical Sciences Laser to investigate the transfer of a weak ripple from the first harmonic to the second harmonic.

31279 (UCRL-JC–121456) **Engineering development for a small-scale recirculator experiment.** Newton, M.A. (Lawrence Livermore National Lab., CA (United States)); Deadrick, F.J.; Hanks, R.L.; Hawkins, S.A.; Holm, K.A.; Kirbie, H.C.; Karpenko, V.P.; Nattrass, L.A.; Longinotti, D.B. Lawrence Livermore National Lab., CA (United States). 4 Sep 1995. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9509149–1: International symposium on heavy ion inertial fusion, Princeton, NJ (United States), 6-9 Sep 1995). Order Number DE96000754. Source: OSTI; NTIS; INIS; GPO Dep.

Lawrence Livermore National Laboratory (LLNL) is evaluating the physics and technology of recirculating induction accelerators for heavy-ion inertial-fusion drivers. As part of this evaluation, the authors are building a small-scale recirculator to demonstrate the concept and to use as a test bed for the development of recirculator technologies. System designs have been completed and components are presently being designed and developed for the small-scale recirculator. This paper discusses results of the design and development activities that are presently being conducted to implement the small-scale recirculator experiments. An, overview of the system design is presented along with a discussion of the implications of this design on the mechanical and electrical hardware. The paper focuses primarily on discussions of the development and design of the half-lattice period hardware and the advanced solid-state modulator.

31280 (UCRL-JC–121585) **The physics of radiation driven ICF hohlraums.** Rosen, M.D. Lawrence Livermore National Lab., CA (United States). 7 Aug 1995. 21p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9508164–1: Plasma physics and technology conference, La Jolla, CA (United States), 8-18 Aug 1995). Order Number DE96000344. Source: OSTI; NTIS; INIS; GPO Dep.

On the Nova Laser at LLNL, we have recently demonstrated many of the key elements required for assuring that the next proposed laser, the National Ignition Facility (NIF) will drive an Inertial Confinement Fusion (ICF) target to ignition. The target uses the recently declassified indirect drive (sometimes referred to as "radiation drive") approach which converts laser light to x-rays inside a gold cylinder, which then acts as an x-ray "oven" (called a hohlraum) to drive the fusion capsule in its center. On Nova we've demonstrated good understanding of the temperatures reached in hohlraums and of the ways to control the uniformity with which the x-rays drive the spherical fusion capsules. In this lecture we briefly review the fundamentals of ICF, and describe the capsule implosion symmetry advantages of the hohlraum approach. We then concentrate on a quantitative understanding of the scaling of radiation drive with hohlraum size and wall material, and with laser pulse length and power. We demonstrate that coupling efficiency of x-ray drive to the capsule increases as we proceed from Nova to the NIF and eventually to a reactor, thus increasing the gain of the system.

31281 (UCRL-JC–121586) **Measurement by XUV laser radiography of hydrodynamic perturbations in laser accelerated thin foil targets.** Key, M.H. (Lawrence Livermore National Lab., CA (United States)); Kalantar, D.H.; Barbee, T.W. Jr. Lawrence Livermore National Lab., CA (United States). 11 Jul 1995. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-950793–20: 40. annual meeting of the Society of Photo-Optical Instrumentation Engineers, San Diego, CA (United States), 9-14 Jul 1995). Order Number DE95016632. Source: OSTI; NTIS; INIS; GPO Dep.

A novel diagnostic application of XUV lasers has been developed for the study of the hydrodynamic imprinting of laser speckle pattern on directly driven laser fusion targets. A neon-like Yttrium laser operating at 15.5 nm is used to probe thin foils of Si irradiated with an SSD smoothed laser at 0.35 mm wavelength and 6 10^{12} Wcm^{-2} intensity, simulating the initial phase of irradiation a laser fusion capsule. Measurements of the perturbations in target opacity are made by XUV radiography through the foil. The magnitude and Fourier composition of the perturbations has been determined both before and after Rayleigh Taylor growth showing the mode spectra of both the initial imprint and the subsequent RT growth.

31282 (UCRL-JC–121624) **Collisionless absorption of light waves incident on overdense plasmas with steep density gradients.** Yang, T.Y.B.; Kruer, W.L.; Langdon, A.B. Lawrence Livermore National Lab., CA (United States). 31 Jul 1995. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9508164–2: Plasma physics and technology conference, La Jolla, CA (United States), 8-18 Aug 1995). Order Number DE95017872. Source: OSTI; NTIS; INIS; GPO Dep.

Collisionless absorption of laser light incident on overdense plasmas with steep density gradients is studied analytically and numerically. For the normal incidence case, it is shown that both sheath inverse bremsstrahlung and the anomalous skin effect are limiting cases of the same collisionless absorption mechanism. Using particle-in-cell (PIC) plasma simulations, the effects of finite sheath-transit time and finite density gradient are investigated. The analyses are extended to oblique incident cases. For p-polarized obliquely incident light, the results are significantly different from those for the normal incidence case. Most noticeable is the absorption enhancement for the p-polarized light due to the interaction of the electrons with the normal (parallel to the density gradient) component of the laser electric field in the sheath region.

31283 (UCRL-JC–121652) **Optical scatter as a diagnostic tool for studying bulk defects which cause laser damage in conventional and rapid growth KP and DKDP.** Woods, B. (and others); Runkel, M.; Yan, M. Lawrence Livermore National Lab., CA (United States). 10 Jul 1995. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-950793–38: 40. annual meeting of the Society of Photo-Optical Instrumentation Engineers, San Diego, CA (United States), 9-14 Jul 1995). Order Number DE95017821. Source: OSTI; NTIS; GPO Dep.

Single crystals of KH_2PO_4 (KDP) and $(D_xH_{1-x})_2PO_4$ (DKDP) will be used for frequency conversion and as part of a large aperture optical switch in the proposed National Ignition Facility (NIF) at the Lawrence Livermore National Laboratory (LLNL). These crystals must have good optical properties and high laser damage thresholds. Currently these crystals have a lower laser damage threshold than other optical materials in the laser chain which has forced designers to limit the output fluence of the NIF in order to avoid damaging the crystals. Furthermore, while more efficient frequency conversion schemes are being explored both theoretically and experimentally, the advantages of these schemes can not be fully

realized unless the damage thresholds of the conversion crystals are increased. Over the past decade, LLNL has generated an extensive data base on the laser damage in KDP and DKDP crystals both at the first and third harmonics of Nd-YAG. While the damage thresholds of these crystals have increased over this time period due, in part, to better filtration of the growth solution, the damage thresholds of the best crystals are still far below what is expected from theoretical limits calculated from the band structure of perfect crystals. Thus damage in KDP and DKDP is caused by defects in the crystals. The authors also rely on a process called laser conditioning to improve the damage thresholds of the crystals. Unfortunately, little is understood about the mechanism of laser induced damage, the conditioning process in the crystals, or the defects which are responsible for damage. The authors have recently implemented a scatter diagnostic for locating and studying defects in crystals and as a tool for studying the mechanism of laser damage and laser conditioning.

31284 (UCRL-JC–121817) **Fault tolerance of the NIF power conditioning system.** Larson, D.W. (Lawrence Livermore National Lab., CA (United States)); Anderson, R.; Boyes, J. Lawrence Livermore National Lab., CA (United States). 7 Jul 1995. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9505264–29: 1. annual solid-state lasers for application to inertial confinement fusion meeting, Monterey, CA (United States), 30 May - 2 jun 1995). Order Number DE96000751. Source: OSTI; NTIS; INIS; GPO Dep.

The tolerance of the circuit topology proposed for the National Ignition Facility (NIF) power conditioning system to specific fault conditions is investigated. A new pulsed power circuit is proposed for the NIF which is simpler and less expensive than previous ICF systems. The inherent fault modes of the new circuit are different from the conventional approach, and must be understood to ensure adequate NIF system reliability. A test-bed which simulates the NIF capacitor module design was constructed to study the circuit design. Measurements from test-bed experiments with induced faults are compared with results from a detailed circuit model. The model is validated by the measurements and used to predict the behavior of the actual NIF module during faults. The model can be used to optimize fault tolerance of the NIF module through an appropriate distribution of circuit inductance and resistance. The experimental and modeling results are presented, and fault performance is compared with the ratings of pulsed power components. Areas are identified which require additional investigation.

31285 (UCRL-LR–119363) **Three dimensional simulations of space charge dominated heavy ion beams with applications to inertial fusion energy.** Grote, D.P. Lawrence Livermore National Lab., CA (United States). 1 Nov 1994. 129p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE96000393. Source: OSTI; NTIS; INIS; GPO Dep.

Heavy ion fusion requires injection, transport and acceleration of high current beams. Detailed simulation of such beams requires fully self-consistent space charge fields and three dimensions. WARP3D, developed for this purpose, is a particle-in-cell plasma simulation code optimized to work within the framework of an accelerator's lattice of accelerating, focusing, and bending elements. The code has been used to study several test problems and for simulations and design of experiments. Two applications are drift compression experiments on the MBE-4 facility at LBL and design of the electrostatic quadrupole injector for the proposed ILSE facility. With aggressive drift compression on MBE-4, anomalous emittance growth was observed. Simulations carried out to examine possible causes showed that essentially all the emittance growth is result of external forces on the beam and not of internal beam space-charge fields. Dominant external forces are the dodecapole component of focusing fields, the image forces on the surrounding pipe and conductors, and the octopole fields that result from the structure of the quadrupole focusing elements. Goal of the design of the electrostatic quadrupole injector is to produce a beam of as low emittance as possible. The simulations show that the dominant effects that increase the emittance are the nonlinear octopole fields and the energy effect (fields in the axial direction that are off-axis). Injectors were designed that minimized the beam envelope in order to reduce the effect of the nonlinear fields. Alterations to the quadrupole structure that reduce the nonlinear fields further were examined. Comparisons were done with a scaled experiment resulted in very good agreement.

31286 (UCRL-PROP–117093-Vol.1) **National Ignition Facility conceptual design report (192 beam): Volume 1, Summary.** Lawrence Livermore National Lab., CA (United States). May 1994. 60p. Sponsored by USDOE, Washington, DC (United States). (NIF-LLNL–94-113-Vol.1). Order Number DE95017677. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The goal of the National Ignition Facility (NIF) project is to provide an aboveground experimental capability for maintaining nuclear competence and weapons effects simulation, and to provide a facility that is capable of achieving fusion ignition utilizing solid-state lasers as the energy driver. In this facility, a large number of laser beams will be focused onto a small target located at the center of a spherical target chamber; the energy from the laser beams will be deposited in a few billionths of a second. The target will then implode, forcing atomic nuclei to sufficiently high temperatures and density necessary to achieve a miniature fusion reaction. The NIF project proposes to construct a facility to accomplish this goal. The NIF Conceptual Design Report (CDR) was prepared by a multi-laboratory team within the Inertial Confinement Fusion (ICF) Program to support the request for line-item funding for the NIF project. The Project is defined by a number of Work Breakdown Structure (WBS) elements, which include: Project Office (WBS 1.1); Conventional Facilities (WBS 1.2); Laser System (WBS 1.3); Target Area (WBS 1.4); Integrated Computer Control Systems (WBS 1.5); Optical Components (WBS 1.6); Start-up Activities (WBS 1.10); ES&H/Supporting R&D (WBS 1.11); The first six elements of the WBS represent plant and capital equipment (PACE) costs and the last two represent other project costs (OPC). The NIF CDR consists of 10 chapters and six appendices.

99 GENERAL AND MISCELLANEOUS

31287 (CONF-9411250–1) **Future generations, environmental ethics, and global environmental change.** Tonn, B.E. Oak Ridge National Lab., TN (United States). [1994]. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From 1. international future generations forum; Kyoto (Japan); 23-25 Nov 1994. Order Number DE95014029. Source: OSTI; NTIS; GPO Dep.

The elements of a methodology to be employed by the global community to investigate the consequences of global environmental change upon future generations and global ecosystems are outlined in this paper. The methodology is comprised of two major components: A possible future worlds model; and a formal, citizen-oriented process to judge whether the possible future worlds potentially inheritable by future generations meet obligational standards. A broad array of descriptors of future worlds can be encompassed within this framework, including survival of ecosystems and other species and satisfaction of human concerns. The methodology expresses fundamental psychological motivations and human myths journey, renewal, mother earth, and being-in-nature-and incorporates several viewpoints on obligations to future generations-maintaining options, fairness, humility, and the cause of humanity. The methodology overcomes several severe drawbacks of the economic-based methods most commonly used for global environmental policy analysis.

31288 (DOE/ER–0660T) **Advanced energy projects; FY 1995 research summaries.** USDOE Office of Energy Research, Washington, DC (United States). Advanced Energy Projects Div. Sep 1995. 51p. Sponsored by USDOE, Washington, DC (United States). Order Number DE96001128. Source: OSTI; NTIS; GPO Dep.

The AEP Division supports projects to explore novel energy-related concepts which are typically at an early stage of scientific development, and high-risk, exploratory concepts. Topical areas presently receiving support are: novel materials for energy technology, renewable and biodegradable materials, exploring uses of

new scientific discoveries, alternate pathways to energy efficiency, alternative energy sources, and innovative approaches to waste treatment and reduction. There were 46 research projects during FY 1995; ten were initiated during that fiscal year. The summaries are separated into grant and laboratory programs, and small business innovation research programs.

31289 (KRC–91A-J03) **Research on the performance Characteristics of Electronic Communication Equipment to Radiated Electromagnetic Field Disturbance.** Ham, K.C. (Korea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center); Park, S.E.; Kang, Y.S.; Moo, H.S.; Choi, H.Y.; Lee, K.C.; Park, B.R.; Ko, Y.; Kim, S.J.; Kim, N.C.; Lee, J.B.; Har, T.H.; Chung, J.Y. Korea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center. 1994. 228p. (In Korean). Order Number DE96703570. Source: OSTI; NTIS (US Sales Only).

Most of modern power system operating and control equipments make use of microelectronics technology. Though these digital equipments have much advantage over the conventional analog tools, they have a weak point that are very sensitive to external electromagnetic environment. Therefore when a new equipment is introduced, we must consider the possibility of mutual interferences between the new equipments and existing ones. And sufficient investigations about the noise immunity of the equipment to neighboring environment should be made. Under the above motivation, KEPCO and KERI carried out a joint project [A] Study on the EMI Effects upon Electronic Appliance Facilities in Substation for two years, and this project is succeeding one. The object of this study is the investigation of radiated noise immunity of electronic communication equipments that use digital and microprocessor technologies, and examination of relation between the applied noise frequency and misoperations of equipments, and the evaluation of CRT effect against extremely low frequency magnetic field. (author). figs.

31290 (KRC–91A-J04) **A Study on Management Techniques of Power Telecommunication System by Reliability Analysis.** Lee, B.K. (Korea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center); Lee, B.S.; Woy, Y.H.; Oh, M.T.; Shin, M.T.; Kwan, O.G.; Kim, K.H.; Kim, Y.H.; Lee, W.T.; Park, Y.H.; Lee, J.J.; Park, H.S.; Choi, M.C.; Kim, J. Korea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center. 1994. 195p. (In Korean). Order Number DE96703569. Source: OSTI; NTIS (US Sales Only).

Power telecommunication network is being increased rapidly in that expansion of power facilities according to the growth of electric power supply. The requirement of power facility and office automation and importance of communication services make it to complex and confusing to operate. And, for the sake of correspond to the change of power telecommunication network, effective operation and management is called for urgently. Therefore, the object of this study is to establish total reliability analysis system based on dependability, maintainability, cost effectiveness and replenishment for keep up reasonable reliability, support economical maintenance and reasonable planning of facility investment. And it will make effective management and administration system and schemes for total reliability improvement. (author). 44 refs., figs.

31291 (KRC–91A-J05) **A Study for development and Application of Hangulization in SCADA System.** Namm, K.C. (Korea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center); Woo, H.K.; Moon, H.S.; Choi, S.S.; Cho, S.K.; Lee, M.G.; Lee, Y.S.; Lee, K.S.; Chung, Y.B.; Lee, H.I.; Wang, B.H.; Chung, J.K.; Hwang, M.S.; Ann, H.S.; Park, J.KKorea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center. 1994. 322p. (In Korean). Order Number DE96703561. Source: OSTI; NTIS (US Sales Only).

[M]9200 SCADA system is being operated for power system control and data acquisition at somedistricts in korea, but all texts are displayed in English, so the operators have difficulty in easy reading and making decision. The purpose of this study is to change the english characters on CRT into the Korean characters. As the result, misunderstanding of power dispatching status will be excluded and system operation efficiency of power dispatching will be improved. In this study, we studied and analyzed hardware and software of M9200 SCADA system, and we developed programs which can be change in korean alphabet display on the peripheral devices of the M9200 SCADA system. (author). 57 refs., figs.

31292 (KRC–91A-S01) **A Study on the Asynchronous Interconnection Technology Between IBM Host and OA Equipment.** Woo, H.K. (Korea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center); Lee, K.J.; Han, M.S.; Lee, B.K.; Cho, H.G.; Kang, S.C.; Chung, C.M. Korea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center. 1993. 237p. (In Korean). Order Number DE96703560. Source: OSTI; NTIS (US Sales Only).

The N5200 word processor could contact to the IBM host only by PT3270KS card and emulation software, which is needed by each machine and it exchanges the data with only synchronous transmitting method. So existing method shows high connecting cost and low line efficiency. For reducing this networking cost and for promoting line efficiency, this study makes a research into protocol conversion which gets users to use of OA devices freely as a asynchronous or synchronous terminal and which makes the data exchange easy. (author). 10 refs., figs.

31293 (KRC–92A-S06) **The Study on Standardization of LAN System for KEPCO.** Chung, C.M. (Korea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center); Woo, H.K.; Kim, J.H. Korea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center. 1994. 267p. (In Korean). Order Number DE96703566. Source: OSTI; NTIS (US Sales Only).

It is necessary to have an individual information and communication network in order to process the power information of many branch offices located throughout the whole country automatically, and nowadays many branch offices are setting up the individual LAN system. But the complexity and variety of computers and network devices can cause a few difficulties to the interconnection and interoperation among those. In this paper, we proposed some standard forms for KEPCO LAN system. (author). 25 refs., figs.

31294 (KRC–93A-T08) **A Technology Study of Wireless LAN for Power Utility Application.** Nam, K.C. (Korea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center); Lee, B.K.; Woy, Y.H.; Ku, Y.K.; Kim, J.B.; Park, D.W.; Chung, H.B. Korea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center. 1994. 181p. (In Korean). Order Number DE96703567. Source: OSTI; NTIS (US Sales Only).

This study is to apply a wireless LAN to KEPCO LAN system. Accordingly, various investigation and analysis about wireless LAN are undertaked. In this paper, advantage and disadvantage, and sorts of wireless LAN are illustrated and a application of wireless LAN system for KEPCO is suggested. (author). 59 refs., figs.

31295 (LA-SUB–95-112) **Now Enhancing Working Skills: The "NEWS" Program. Final report.** Kuiper, A. (Merex Corp. (United States)). Los Alamos National Lab., NM (United States); Merex Corp. (United States). 23 Jan 1995. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE95017807. Source: OSTI; NTIS; GPO Dep.

In October of 1992, Los Alamos National Laboratory and Merex Corporation began a pilot basic skills program to enhance workers' skills. The program, known as the NEWS (Now Enhancing Working Skills) Program, was implemented by the Training and Development Group of the Human Resources Division. A group of 106 employees known as Radiological Control Technicians (RCTs) from ESH-1 (Environmental, Safety, and Health) were targeted to take mandated DOE (Department of Energy) training. The main goal of the LANL/Merex partnership was to help RCTs prepare for mandated DOE Rad Con training and job performance by improving their information processing and math skills. A second goal of this project was to use the information from this small group to make some predictions about the Laboratory as a whole. This final report contains the description and an appendix for the "NEWS" program. The topics in this report include Merex class descriptions, test score results for the MAT, the WAT, the TABE, and Challenge test, a follow-up survey to Merex IPS and math training, student feedback statistics for skills programs, and lessons learned from the program.

31296 (LA-SUB–95-139) **Research on Mega-Math: Discrete mathematics and computer science for children. Final report.** Fellows, M.R. (Victoria Univ., BC (Canada)). Los Alamos National Lab., NM (United States); Victoria Univ., BC (Canada). 26 Jun 1995. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE95017808. Source: OSTI; NTIS; GPO Dep.

The objective of the subcontract was to provide further research on the approach to mathematics education embodied in the workbook "This is Mega-Mathematics!" essentially produced under the subcontract and its preceding informal (alas!) cooperative arrangements. The workbook is now widely and freely distributed on the Internet under the copyright of the Los Alamos National Labs. This research was to consist of: (1) the development and dissemination of materials, (2) experimentation with use of the materials in classroom visits and other events, (3) communication of the ideas embodied in the materials to various forums concerned with mathematics education reform, (4) the development of connections to the computer games industry, (5) the development of new workbook-type materials, (6) publications, (7) the development of connections to Science Museums, (8) the development of uses of the Internet to make MegaMath materials and ideas available through that medium, (9) the stimulation of and coordination with other projects in mathematics education reform. All of these objectives have been accomplished in what should be regarded as one of the most interesting and cost-effective projects ever undertaken in mathematics education, a testimony to the vision and creative imagination of the Los Alamos Labs.

31297 (NUREG–0540) **Title list of documents made publicly available. Volume 17, No. 7.** Nuclear Regulatory Commission, Washington, DC (United States). Div. of Freedom of Information and Publications Services. Sep 1995. 260p. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). Source: OSTI; NTIS; INIS; GPO.

The Title List of Documents Made Publicly Available is a monthly publication. It contains descriptions of the information received and generated by the US Nuclear Regulatory Commission (NRC). This information includes (1) docketed material associated with civilian nuclear power plants and other uses of radioactive materials and (2) nondocketed material received and generated by NRC pertinent to its role as a regulatory agency. As used here, docketed does not refer to Court dockets; it refers to the system by which NRC maintains its regulatory records. This series of documents is indexed by a Personal Author Index, a Corporate Source Index, and a Report Number Index.

31298 (BNL–62187) **Review of laboratory programs for women Points-of-Contact Committee.** Duke, D. (National Renewable Energy Lab., Golden, CO (United States)); Magrini, K. (comps.); McLane, V. (comp.); Wieda, K. (comp.). Brookhaven National Lab., Upton, NY (United States). Jun 1995. 25p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. Order Number DE96000427. Source: OSTI; NTIS; GPO Dep.

The mission of the DOE Review of Laboratory Programs for Women is to: provide DOE and its Laboratories with effective strategies, targeting women, for establishing aggressive outreach programs which improve the access of women to careers in science, engineering, and mathematics. Ensure that the Department and its Laboratories are exemplary places of employment by providing programs which enhance opportunity, remove barriers, and assist women in achieving full professional development. A survey of the DOE facilities was undertaken by the Points-of-Contact for the DOE Review of Laboratory Programs for Women in order to gather data to be used as a baseline against which to measure future progress. We plan to look at current programs already in place and evaluate them with a view to deciding which programs are most effective, and selecting model programs suitable for implementation at other facilities. The survey focused on four areas: statistical data, laboratory policy, formal and informal programs which affect the quality of life in the work environment, and career development and advancement, and educational programs. Although this report focuses on women, the problems discussed affect all DOE facility employees.

31299 (DOE/ER/75955–T2) **Final technical report: Energy Works Lab, December 15, 1994–August 14, 1995.** Fort Worth Museum of Science and History, TX (United States). Interpretive Div. [1995]. 64p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-94ER75955. Order Number DE96000445. Source: OSTI; NTIS; GPO Dep.

The Energy Works Lab project was a two tier project consisting of the GIRLS SUMMER LAB and ENERGY WORKS. This final report is a summary of the completed project.

31300 (DOE-HDBK–7502-95-Vol.1) **Implementing US Department of Energy lessons learned programs. Volume 1.** USDOE, Washington, DC (United States). Aug 1995. 61p. Sponsored by USDOE, Washington, DC (United States). Order Number DE95017322. Source: OSTI; NTIS; GPO Dep.

Purpose of this handbook is provide DOE and DOE contractor organizations with information that can be used to modify existing lessons learned programs or to develop new programs.

31301 (DOE-HDBK–7502-95-Vol.2) **Implementing US Department of Energy lessons learned programs. Volume 2.** USDOE, Washington, DC (United States). Aug 1995. 100p. Sponsored by USDOE, Washington, DC (United States). Order Number DE95017323. Source: OSTI; NTIS; GPO Dep.

The DOE Lessons Learned Handbook is a two-volume publication developed to supplement the DOE Lessons Learned Standard (DOE-STD-7501-95) with information that will organizations in developing or improving their lessons learned programs. Volume 1 includes greater detail than the Standard in areas such as identification and documentation of lessons learned; it also contains sections on specific processes such as training and performance measurement. Volume 2 (this document) contains examples of program documents developed by existing lessons learned programs as well as communications material, functional categories, transmittal documents, sources of professional and industry lessons learned, and frequently asked questions about the Lessons Learned List Service.

31302 (INDC(NDS)–336) **Report of the IAEA Nuclear Data Section to the International Nuclear Data Committee for the period 1993/1994.** International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Jul 1995. 55p. Order Number DE96602143. Source: OSTI; NTIS (US Sales Only); INIS.

This progress report describes the activities of the IAEA Nuclear Data Section in the years 1993 and 1994, including staff and budget, the operation of the Nuclear Data Center, the computer operations, the coordination activities of the Nuclear Data Center Networks, the nuclear data improvements projects, Technical Cooperation and technology transfer, atomic and molecular data activities, and the meetings held in the reporting period. (author). 7 tabs.

This issue is the collection of the papers presented at the title meeting. The 13 of the presented papers are indexed individually. (J.P.N.).

31304 (INIS-JP–041) **KURRI progress report 1993. April 1993 - March 1994.** Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst. Oct 1994. 489p. Order Number DE95776795. Source: OSTI; NTIS (US Sales Only); INIS; Available from the Research Reactor Institute, Kyoto Univ., Kumatori-cho, Sennan-gun, Osaka-fu 590-04 (Japan).

In this third issue of the KURRI Progress Report, the summaries of Project Researches which started in fiscal year 1993 are included. These research areas fit in the five research areas which are pursued with priority in the future activities utilizing the KUR. The reactor KUR added 1600 h of operation during the past fiscal year, and the operation hours reached 227.4 Gh. 160 research works were added, and the total number became 4817. 1860 visiting researchers were accepted during the year, and the total number became 49,809. In the field of boron neutron capture therapeutics, 14 more patients were treated, which brought the total to 44. Now, there are 5 medical teams performing this therapy. The Atomic Energy Commission compiled the new 'Long term program for research, development and utilization of nuclear energy' in June, 1994. The research activities on slow neutron physics and neutron scattering, nuclear physics and nuclear chemistry, reactor physics and reactor engineering, material science and radiation effects, geochemistry and environmental science, life science and medical science, neutron capture therapy, neutron radiography and radiation application and radioactive waste management and health physics are reported. (K.I.).

31305 (INIS-mf–14565) **IAEA technical co-operation activities in the 1990s.** International Atomic Energy Agency, Vienna (Austria). Jan 1995. 35p. Order Number DE96602799. Source: OSTI; NTIS (US Sales Only); INIS.

The desire to extend the many benefits of the peaceful uses of nuclear technology to all countries led as long ago as 1957 to the establishment of the IAEA and to immediate introduction of a technical co-operation programme. In the more than thirty years that have passed since that time, the potential applications of nuclear techniques have greatly expanded. Over the period, many of the applications have moved from research laboratories into hospitals, farms and industrial enterprises. The direct resources made available to the IAEA by its Member States to support technology transfer processes have grown rapidly since the late 1950s. The current trends in the technical co-operation activities of the IAEA and some examples of projects supported by the IAEA are briefly presented in this document.

31306 (INIS-mf–14569) **Nuclear information: the IAEA and global nuclear communication.** Wedekind, L. (International Atomic Energy Agency, Vienna (Austria). Div. of Public Information). International Atomic Energy Agency, Vienna (Austria). Div. of Public Information; Comision de Energia Atomica, La Habana (Cuba). 1995. 9p. (CONF-9505292–: Regional seminar on public information of nuclear energy, Habana (Cuba), 17-19 May 1995). Order Number DE96602800. Source: OSTI; NTIS (US Sales Only); INIS.

The IAEA's activities regarding nuclear communication and information disclosure are treated in this paper.

31307 (INIS-mf–14570) **Public information activities in Cuba: The role of the Nuclear Energy Information Center.** Petinaud M, J. (Centro de Informacion de la Energia Nuclear, La Habana (Cuba)); Aguilar M, O. International Atomic Energy Agency, Vienna (Austria). Div. of Public Information; Comision de Energia Atomica, La Habana (Cuba). 1995. 14p. (In Spanish). (CONF-9505292–: Regional seminar on public information of nuclear energy, Habana (Cuba), 17-19 May 1995). Order Number DE96602801. Source: OSTI; NTIS (US Sales Only); INIS.

Cuba's efforts and especially those of the CIEN to ensure the scientific and technical information to specialist, as well as the disclosure of nuclear issues island wide, are treated in this paper.

31308 (LA-SUB–95-91) **M2 priority screening system for near-term activities: Project documentation. Final report December 11, 1992–May 31, 1994.** Los Alamos National Lab., NM (United States); Applied Decision Analysis, Inc., Menlo Park, CA (United States). 12 Aug 1993. 300p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE95014559. Source: OSTI; NTIS; GPO Dep.

From May through August, 1993, the M-2 Group within M Division at LANL conducted with the support of the LANL Integration and Coordination Office (ICO) and Applied Decision Analysis, Inc. (ADA), whose purpose was to develop a system for setting priorities among activities. This phase of the project concentrated on prioritizing near-tenn activities (i.e., activities that must be conducted in the next six months) necessary for setting up this new group. Potential future project phases will concentrate on developing a tool for setting priorities and developing annual budgets for the group's operations. The priority screening system designed to address the near-term problem was developed, applied in a series of meeting with the group managers, and used as an aid in the assignment of tasks to group members. The model was intended and used as a practical tool for documenting and explaining decisions about near-term priorities, and not as a substitute for M-2 management judgment and decision-making processes.

31309 (SAND–95-2256C) **Applying the Laboratory Integration and Prioritization System (LIPS) to decision-making at Sandia National Laboratories.** Barber, D.S. (Sandia National Labs., Albuquerque, NM (United States). Services Management System Office); Mead, J.W. Sandia National Labs., Albuquerque, NM (United States). [1995]. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-9508169–1: Energy Facilities Contractors Operating Group, Prioritization Working Group & Prioritization Methodology Users Group prioritization methodology workshop, Idaho Falls, ID (United States), 22-23 Aug 1995). Order Number DE96000755. Source: OSTI; NTIS; GPO Dep.

The Laboratories Services Division of Sandia National Laboratories includes a wide variety of operations such as environmental, safety and health, safeguards and security, facilities, logistics, and sites planning and integration. In the face of declining budgets and increasing requirements, the Management Team needed some tools to assist in negotiating with customers and regulators and in consistently and cost-effectively managing all work performed and/or managed by the Division. The Integrated Services Management System (ISMS) was developed as a series of processes to provide these tools. The Laboratory Integration and Prioritization System (LIPS) was selected as the prioritization methodology for ISMS. The pilot application phase was begun in February 1994 and addressed planning of work and resources for FY95. Extensive training was provided for the Activity Data Sheet (ADS) preparers and the teams which would score each of the activities. After preparation of the ADSs, they were scored by the scoring teams. A division-wide review board reviewed all of the ADSs to ensure consistency of scoring across all of the functional areas. The lessons that were learned from the pilot application were evaluated and improvements incorporated for the FY96 planning and application. The improvements included upgrading the training, providing expert facilitation for scoring boards, modification of the scoring instructions to better represent local situations, and establishing an Validation Board with more authority and accountability to provide quality assurance. The participants in the LIPS process have agreed that no major bases were uncovered, imperfect prioritizations are better than no data, all work packages can be scored and ranked, including core activities, results were objective and quantifiable, and decisions could be made using technically defensible bases.

31310 (UCRL-ID–119329) **The role of risk-based prioritization in total quality management.** Bennett, C.T. Lawrence Livermore National Lab., CA (United States). Oct 1994. 26p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE96001073. Source: OSTI; NTIS; GPO Dep.

The climate in which government managers must make decisions grows more complex and uncertain. All stakeholders - the public, industry, and Congress - are demanding greater consciousness, responsibility, and accountability of programs and their budgets. Yet, managerial decisions have become multifaceted, involve greater risk, and operate over much longer time periods. Over the last four or five decades, as policy analysis and decisions became more complex, scientists from psychology, operations research, systems science, and economics have developed a more or less coherent process called decision analysis to aid program management. The process of decision analysis - a systems theoretic approach - provides the backdrop for this paper. The Laboratory Integrated Prioritization System (LIPS) has been developed as a systems analytic and risk-based prioritization tool to aid the management of the Tri-Labs' (Lawrence Livermore, Los Alamos,

and Sandia) operating resources. Preliminary analyses of the effects of LIPS has confirmed the practical benefits of decision and systems sciences - the systematic, quantitative reduction in uncertainty. To date, the use of LIPS - and, hence, its value - has been restricted to resource allocation within the Tri-Labs' operations budgets. This report extends the role of risk-based prioritization to the support of DOE Total Quality Management (TQM) programs. Furthermore, this paper will argue for the requirement to institutionalize an evolutionary, decision theoretic approach to the policy analysis of the Department of Energy's Program Budget.

31311 (WR-B–95-08) **Audit of subsidized ancillary services at the Nevada Test site.** USDOE Office of Inspector General, Albuquerque, NM (United States). Western Regional Audit Office. 8 Sep 1995. 16p. Sponsored by USDOE, Washington, DC (United States). Source: OSTI (Free of Charge).

The Department and its contractors have participated in at least six reviews since 1991 encompassing aspects of subsidies at the test site. Several of these reviews resulted in reports recommending reductions to the housing, food, and bus services. A strategic planning report completed in November 1994, for example, recommended closing certain food service facilities, increasing housing rates to fair market value, and studying a bus depot system. Other reports echoed the same themes. The Department should be credited for recognizing that actions should be taken to reduce subsidy costs. Moreover, the Acting Manager, Nevada Operations office, has been proactive in reducing the busing subsidy by decreasing the number of buses and bus routes. The Acting Manager has also been fully supportive of the effort to further reduce subsidies. We appreciate these efforts.

31312 (ANSTO/E–722) **Derivation of a macroscale formulation for a class of nonlinear partial differential equations.** Pantelis, G. Australian Nuclear Science and Technology Organisation, Lucas Heights, NSW (Australia). May 1995. 14p. Order Number DE96602796. Source: OSTI; NTIS; INIS.

A macroscale formulation is constructed from a system of partial differential equations which govern the microscale dependent variables. The construction is based upon the requirement that the solutions of the macroscale partial differential equations satisfy, in some approximate sense, the system of partial differential equations associated with the microscale. These results are restricted to the class of nonlinear partial differential equations which can be expressed as polynomials of the dependent variables and their partial derivatives up to second order. A linear approximation of transformations of second order contact manifolds is employed. 6 refs.

31313 (CONF-9406184–Final) **Fifth SIAM conference on applied linear algebra. Final report.** Lewis, J.G.; Gilbert, J.R.; Parlett, B.N. Society for Industrial and Applied Mathematics, Philadelphia, PA (United States). 16 Nov 1994. 29p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-94ER25197. From 5. SIAM conference on applied linear algebra; Snowbird, UT (United States); 15-18 Jun 1994. Order Number DE95016992. Source: OSTI; NTIS; GPO Dep.

The SIAM Conferences on Applied Linear Algebra are the centerpiece of activities for the SIAG on Linear Algebra. They are held every three years and bring together a diverse group of applied linear algebraists, representing industry, government and academics in both matrix theory and matrix computations. This sequence of conferences has two related goals: (1) to be useful and interesting to linear algebraists of every area of specialization, and, (2) to develop and expose connections among problems in different areas. Many aspects of the 1994 conference were carefully chosen to enhance interchange between the various groups and yet still provide a solid focus on specialities. The organizing committee adopted a new meeting structure to resolve the conflict between these two goals at earlier meetings in the series. We have prepared this report for others who may wish to consider our structure as an alternative to more traditional arrangements.

31314 (CONF-941273–Suppl.) **Special parallel processing workshop.** Lawrence Livermore National Lab., CA (United States). Dec 1994. 80p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. From Special parallel process workshop; Livermore, CA (United States); 6-7 Dec 1994. Order Number DE96000061. Source: OSTI; NTIS; GPO Dep.

This report contains viewgraphs from the Special Parallel Processing Workshop. These viewgraphs deal with topics such as parallel processing performance, message passing, queue structure, and other basic concept detailing with parallel processing.

31315 (DOE/ER/25188–T1) **Report of the Federal Internetworking Requirements Panel.** National Inst. of Standards and Technology, Gaithersburg, MD (United States). 31 May 1994. 45p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AI02-93ER25188. Order Number DE95017761. Source: OSTI; NTIS; GPO Dep.

The Federal Internetworking Requirements Panel (FIRP) was established by the National Institute of Standards and Technology (NIST) to reassess Federal requirements for open systems networks and to recommend policy on the Government's use of networking standards. The Panel was chartered to recommend actions which the Federal Government can take to address the short and long-term issues of interworking and convergence of networking protocols–particularly the Internet Protocol Suite (IPS) and Open Systems Interconnection (OSI) protocol suite and, when appropriate, proprietary protocols. The Panel was created at the request of the Office of Management and Budget in collaboration with the Federal Networking Council and the Federal Information Resources Management Policy Council. The Panel's membership and charter are contained in an appendix to this report.

31316 (DOE/OR/21400–T482) **Development of a modular integrated control architecture for flexible manipulators. Final report.** Burks, B.L. (Oak Ridge National Lab., TN (United States)); Battiston, G. Oak Ridge National Lab., TN (United States). 8 Dec 1994. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE96000762. Source: OSTI; NTIS; INIS; GPO Dep.

In April 1994, ORNL and SPAR completed the joint development of a manipulator controls architecture for flexible structure controls under a CRADA between the two organizations. The CRADA project entailed design and development of a new architecture based upon the Modular Integrated Control Architecture (MICA) previously developed by ORNL. The new architecture, dubbed MICA-II, uses an object-oriented coding philosophy to provide a highly modular and expandable architecture for robotic manipulator control. This architecture can be readily ported to control of many different manipulator systems. The controller also provides a user friendly graphical operator interface and display of many forms of data including system diagnostics. The capabilities of MICA-II were demonstrated during oscillation damping experiments using the Flexible Beam Experimental Test Bed at Hanford.

31317 (EGG–11265-1130) **An information management and communications system for emergency operations.** Gladden, C.A.; Doyle, J.F. EG and G Energy Measurements, Inc., Las Vegas, NV (United States). [1995]. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC08-93NV11265.

(CONF-950430–12: 5. ANS topical meeting on emergency preparedness and response, Savannah, GA (United States), 18-21 Apr 1995). Order Number DE96000154. Source: OSTI; NTIS; GPO Dep.

In the mid 1980s the US Department of Energy (DOE) recognized the need to dramatically expand its Emergency Operations Centers to deal with the large variety of emergencies for which DOE has an obligation to manage, or provide technical support. This paper describes information management, display, and communications systems that have been implemented at the DOE Headquarters Forestall Operations Center (OC), DOE Operations Offices, and critical laboratory locations. Major elements of the system at the DOE Headquarters facility include computer control, information storage and retrieval, processing, Local Area Networks (LANs), videoconferencing, video display, and audio systems. These Headquarters systems are linked by Wide Area Networks (WANs) to similar systems at the Operations Office and critical Laboratory locations.

31318 (EGG–11265-5031) **Virtual instruments – A Los Alamos experiment.** Khalsa, N.S. EG and G Energy Measurements, Inc., Los Alamos, NM (United States). Los Alamos Operations. [1995]. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC08-93NV11265. (CONF-9505286–1: Digital signal processing conference and exposition, San Jose, CA (United States), 15-19 May 1995). Order Number DE96000190. Source: OSTI; NTIS; GPO Dep.

Changing priorities, shrinking budgets, reduced personnel, and collapsed time schedules in post-Cold War Los Alamos have forced project managers to face software "time-to-market" issues similar to their commercial counterparts. Programs that are funded over a period of several years are now the exception rather than the norm. Projects are much more diverse and have more clearly defined goals and termination points compared with the previous objective of incremental improvements through a series of developmental efforts. Software development and support for such projects has to be less costly than before, since the software is a "throw-away" when the project is over. The authors came up with a wish list for a software development system that would meet their needs. The list includes: (1) higher productivity, faster turnaround than the present approach of starting from scratch in C or FORTRAN; (2) flexibility–able to make moderate changes in program flow without significant setbacks in the development schedule; (3) high-level focus–spending more time on the algorithms and less time on GUI or driver issues; (4) greater code reusability, and good mechanisms for documenting code flow and code modifications; (5) multiplatform implementations–IBM-PC, Sun, Mac, not so much for code porting but for user training issues; (6) reasonable code execution speeds–able to keep up with data acquisition rates required for the project; (7) ability to link-in external code when necessary; (8) sufficient debugging tools; (9) satisfactory product support and response times to questions (hours, not days); and (10) vital life signs from the vendor's R and D department–upgrades, bug fixes, enhancements, response to customer feedback.

31319 (ESTSC–000138FUJ5000) **DYNA3DREV5. Explicit 3-d Hydrodynamic FEM Program.** Wolery, T. (Lawrence Livermore National Lab., CA (United States)). Fujitsu Systems Business of America, Inc., Santa Clara, CA (United States). 1 May 1991. Sponsored by USDOE, Washington, DC (United States). Source: ESTSC.

Description: FUJITSUVPP500; UXP/M V10L10; FORTRAN; 1 QIC Cartridge. Instead of running the program interactively, the execution can be submitted to the background now.

DYNA3DREV5 is an explicit, three-dimensional, finite element program for analyzing the large deformation dynamic response of inelastic solids and structures. DYNA3DREV5 contains 30 material models and 10 equations of state (EOS) to cover a wide range of material behavior. The material models implemented are: elastic, orthotropic elastic, kinematic/isotropic plasticity, thermoelastoplastic, soil and crushable foam, linear viscoelastic, Blatz-Ko rubber, high explosive burn, hydrodynamic without deviatoric stresses, elastoplastic hydrodynamic, temperature-dependent elastoplastic, isotropic elastoplastic, isotropic elastoplastic with failure, soil and crushable foam with failure, Johnson/Cook plasticity model, pseudo TENSOR geological model, elastoplastic with fracture, power law isotropic plasticity, strain rate dependent plasticity, rigid, thermal orthotropic, composite damage model, thermal orthotropic with 12 curves, piecewise linear isotropic plasticity, inviscid two invariant geologic cap, orthotropic crushable model, Moonsy-Rivlin rubber, resultant plasticity. The hydrodynamic material models determine only the deviatoric stresses. Pressure is determined by one of 10 equations of state including linear polynomial, JWL high explosive, Sack Tuesday high explosive, Gruneisen, ratio of polynomials, linear polynomial with energy deposition, ignition and growth of reaction in HE, tabulated compaction, tabulated, and TENSOR pore collapse. DYNA3DREV5 generates three binary output databases. One contains information for complete states at infrequent intervals; 50 to 100 states is typical. The second contains information for a subset of nodes and elements at frequent intervals; 1,000 to 10,000 states is typical. The last contains interface data for contact surfaces.

31320 (ESTSC–000154FUJ5000) **KIVA2. 2D & 3D Reactive Flows With Fuel Sprays.** Amsden, A.A. (Sandia National Labs., Albuquerque, NM (United States)). Fujitsu Systems Business of America, Inc., Santa Clara, CA (United States). 1 May 1989. Sponsored by USDOE, Washington, DC (United States). Source: ESTSC.

Description: FUJITSUVPP500; MSP; FORTRAN; 1 Mag Tape. Several SLATEC3.1 and LINPACK routines are called. These routines are provided. KIVA2 also calls some CTSS system routines and LANL-specific graphics routines. These routines are not provided but are described at the end of the FORTRAN source.

KIVA2 solves the equations of transient, two and three-dimensional, chemically reactive fluid flow with sprays. The KIVA2 equations and numerical solution procedure are very general and can be applied to laminar or turbulent flows, subsonic or supersonic flows, and single-phase or dispersed two-phase flows. Arbitrary numbers of chemical species and reactions are allowed. A stochastic particle method is used to calculate evaporating liquid sprays, including the effects of droplet collisions and aerodynamic breakups. Although the initial and boundary conditions and mesh generation were written for internal combustion energy calculations, the logic for these specifications can be easily modified for a variety of other applications.

31321 (ESTSC–000154FUJ5001) **KIVA3. 2D & 3D Reactive Flows With Fuel Sprays.** Amsden, A.A. (Los Alamos National Lab., NM (United States)). Fujitsu Systems Business of America, Inc., Santa Clara, CA (United States). 1 May 1989. Sponsored by USDOE, Washington, DC (United States). Source: ESTSC.

Lawrence Livermore National Lab., CA (United States). 1 Feb 1995. Sponsored by Lawrence Livermore National Lab., CA (United States). Source: ESTSC.

Description: SUN SPARC; Computers running UNIX with X WiC, FORTRAN; 1 Tape.

VIEW is a software system for processing arbitrary multidimensional signals. It provides facilities for numerical operations, signal displays, and signal databasing. The major emphasis of the system

is on the processing of time-sequences and multidimensional images. The system is designed to be both portable and extensible. It runs currently on UNIX systems, primarily SUN workstations.

31323 (ESTSC–000324IB38602) **EQ3/6 V7.2B. Geochemical Modeling Of Aqueous Systems.** Wolery, T.A. (Lawrence Livermore National Lab., CA (United States)). Lawrence Livermore National Lab., CA (United States). 30 Jul 1993. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Source: ESTSC; Lawrence Livermore National Lab.

Description: IBM PC 386; DOS 6.2 or later with MicroSoft Lahey extended Fortran (F77L-EM/32, v. 5.11) with DOS system calls; 5 3.5 Diskettes. EQ3NR input files end in .3i, EQ6 input files end in .6i. This is a recommended convention, and it is required in order to run these codes using the PC interface software. The data file names have the form exemplified by data0.com. Here com is one of the five data file descriptors. This general form is required to run the RUNEQPT script. The main code FORTRAN source files end in .fsc. The PC interface software source codes end in .for. The EPCLIB library supports the PC interface codes. This library is included in the distribution package.

EQ3/6 is a software package for geochemical modeling of aqueous systems. This description pertains to version 7.2b. It addresses aqueous speciation, thermodynamic equilibrium, disequilibrium, and chemical kinetics. The major components of the package are EQ3NR, a speciation-solubility code, and EQ6 a reaction path code. EQ3NR is useful for analyzing groundwater chemistry data, calculating solubility limits, and determining whether certain reactions are in states of equilibrium or disequilibrium. It also initializes EQ6 calculations. EQ6 models the consequences of reacting an aqueous solution with a specified set of reactants (e.g., minerals or waste forms). It can also model fluid mixing and the effects of changes in temperature. Each of five supporting data files contain both standard state and activity coefficient-related data. Three support the use of the Davies or B-dot equations for the activity coefficients; the other two support the use of Pitzer's equations. The temperature range of the thermodynamic data on the data files varies from 25 degrees C only to 0-300 degrees C.

31324 (ESTSC–000324SUN0004) **EQ3/6 V7.2B. Geochemical Modeling of Aqueous Systems.** Wolery, T.J. (Lawrence Livermore National Lab., CA (United States)). Lawrence Livermore National Lab., CA (United States). 14 Sep 1992. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Source: ESTSC; Lawrence Livermore National Lab.

Description: SUN; UNIX; ANSI FORTRAN 77; UNIX interface software, C-shell UNIX; 3 3.5 Diskettes. EQ3NR input files end in .3i, EQ6 input files end in .6i. This is a recommended convention, and it is required in order to run these codes using the UNIX interface software. The data file names have the form exemplified by data0.comR22. Here com is one of the five data file descriptors and R22 is a stage number (a configuration control identifier). The main code FORTRAN source files end in .fsc. The EQLIB library package supports the EQPT, EQ3NR, and EQ6 codes. This library is included with the package.

EQ3/6 is a software package for geochemical modeling of aqueous systems. This description pertains to version 7.2B. 31325 (ESTSC–000816AL00000) **MAP. Builds/Maintains 2D Grid Maps of Sensor Data in Real-Time.** Drotning, W.D. (Sandia National Labs., Albuquerque, NM (United States)). Sandia National Labs., Albuquerque, NM (United States). 1 Aug 1991. Sponsored by USDOE, Washington, DC (United States). Source: ESTSC.

Description: APPLE MACINTOSH; VxWorks, version 4; C; 1 3.5 Diskette. Requires include files map.h, sonx.h, xvme.h (included). Source is in map.c file.

The function of MAP is to build and maintain two dimensional (2D) grid maps of information. For example, MAP has been used to combine robot position data and ultrasonic range measurement data to generate surface elevation maps in real-time, or with metal detector data for metal signal intensity mapping. Although originally written to handle processed sensor data, the functional capability of MAP allows it to be used for any type of 2D information. Subregions of the primary 2D map are maintained which have independent grid resolution. System data and information are available through function calls, global data structures, and via client/server commands. The MAP software includes the following functional features: control, data processing, and server commands.

31326 (ESTSC–000817AL00000) **MESH. Builds/Maintains 2D Grid Maps of Sensor-Detected Obstacles in Real-Time.** Drotning, W.D. (Sandia National Labs., Albuquerque, NM (United States)). Sandia National Labs., Albuquerque, NM (United States). 1 Aug 1991. Sponsored by USDOE, Washington, DC (United States). Source: ESTSC.

Description: APPLE MACINTOSH; VxWorks, version 4; C; 1 3.5 Diskette. Requires include files mesh.h, sonx.h, xvme.h (included). Source is in mesh.c file.

The function of MESH is to build and maintain two dimensional (2D) grid maps of detected obstacles. Obstacle detection and mapping are performed by combining position and range-to-target information. For example, MESH has been used to combine robot position data and ultrasonic range measurement data form sensors to generate a 2D obstacle map in real-time for robotic obstacle detection and collision avoidance. Although orginally written to handle processed sensor data, the functional capability of MESH allows it to be used for any type of 2D information. An external client can access the 2D obstacle map for computer model generation of objects. In order to provide robust obstacle detection from noisy data, the software design contains features for statistical analysis to obtain noise immunity, dynamic thresholding for obstacle detection and strength measurement, nearest neighbor grid interactions, and sensor weighting capabilities. In addition, the algorithms which process information into the obstacle map include obstacle shadowing effects and the concept of a sensor range horizon. System data and information are available through function calls, global data structures, and via client/server commands. The MESH software includes the following functional features: control, data processing and server commands.

31327 (ESTSC–000829SUN0000) **CLERVER. Interactive Collaborative Environments.** Dean, C. (Sandia National Labs., Albuquerque, NM (United States)); Lin, H.; Pastorek, B.; Bauer, K.; Volkmer, G. Sandia National Labs., Albuquerque, NM (United States). 1 Jun 1993. Sponsored by USDOE, Washington, DC (United States). Source: ESTSC.

Description: SUN; UNIX, X-11 R5; The source code is written in C.; 1 Tape. CLERVER only shares applications running under X-windows or X-server.

Time has been an invaluable commodity. In today's workplace of increased workload and shorter deadlines, solutions must be found to share electronic information quickly if not immediately. Teams would often have to schedule face-to-face meetings to share ideas which often proved to be expensive in both dollars and time if the participants were required to travel long distances. Software engineers at Sandia National Laboratories in Albuquerque, New Mexico, have developed a solution for this problem. The solution is a software product called ICE. The heart of ICE is the CLERVER which allows teams to collaborate via their own workstation with one another and view changes in real time. CLERVER's capabilities allow; immediate feedback, quicker decisions, first-hand involvement, broader participation, and interactive on-line problem solving. This sharing allows users to utilize only one copy of an application and share with up to 20 additional users. Each user in the session appears to be running the application locally, but in fact, the application only resides on one machine. When the session is

over, any changes made and saved are recorded on the system where the valid application license resides.

31328 (ESTSC–000831SPARC00) **RIPE/RIPL. Robot Independent Programming Environment and Language.** Miller, D. (Sandia National Laboratories, Albuquerque, NM (United States)); Lennox, R.C.; Fahrenholtz, J.; Shinn, R.; Rhea, R.; Rogers, M. Sandia National Labs., Albuquerque, NM (United States). 1 Jan 1990. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. Source: ESTSC.

Description: SUN SPARC; UNIX, Vx Works; 97% C++, 3% C; 1 QIC Cartridge. Requires the Monitor program for particular robot being used.

RIPE is an object-oriented approach to robot system architectures; it is a software environment which facilitates rapid design and implementation of complex robot systems for diverse applications. The robot work cell is modeled using software objects and supports model-based automated programming of robotic and machining devices, real-time sensor-based control, error handling, robust communications and graphical interfaces for robot system control. The objects include robots, sensors, end effectors, workpieces, NC machines and various other devices. A set of generic classes is defined to represent these objects, and the interfaces to them become RIPL.

31329 (ESTSC–000987IBMPC00) **DOTS7.4. Image Analysis for Sequencing by Hybridization of DNA Fragments.** Jarvis, J. (Argonne National Laboratory, IL (United States)); Drmanac, R. Argonne National Lab., IL (United States). 1 Mar 1993. Sponsored by USDOE, Washington, DC (United States). Source: ESTSC.

Description: IBM PC; DOS 5.0; Borland C++ 3.00; 1 3.5 Diskette. The 16-bit TIFF input (.GEL) files are created by Molecular Dynamics ImageQuant sotware on their PhosphorImager. This version of DOTS accesses the large (3- to 20-megabyte) .GEL files on either a DOS disk or on a UNIX disk, connected to DOS via PC-NFS, the Sun network package.

DOTS is an image analysis program which extracts thousands of dot values from TIFF image files produced by a Molecular Dynamics Phosphorimager in the sequence by hybridization (SBH) process of DNA sequencing. Physical dots are tiny spots of DNA deposited by a robot on a nylon membrane, which are then exposed to radioactive probes of known sequence. When a probe hybridizes to a dot with complementary sequence, a signal of higher intensity is generated. The output of the DOTS program is a measurement of volume, peak value, and locations of center of mass and peak for dot each clone. This information is accumulated for many probes to build up a signature profile for each dot. Dot clones which have novel signatures are identified to be sequenced by conventional methods or they may be sequenced by SBH methods, provided the oligo overlap density is high enough and branching point ambiguties can be resolved.

31330 (ESTSC–001001SPARC00) **FORMBUILDER. FORMBUILDER/FBGRAPHICS.** Goetsch, J.A. (Idaho National Engineering Laboratory, Idaho Falls, ID (United States)). EG and G Idaho, Inc., Idaho Falls, ID (United States). 1 Sep 1994. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-94ID13223. Source: ESTSC.

Description: SUN SPARC; FormBuilder and FBGraphics libraC programming language; 1 3.5 Diskette. FormBuilder and FBGraphics are both written in the C programming language since they are an interface layer to other C libraries. Parallel Ada bindings are also provided. The Ada bindings are not necessarily between compilers since, by nature, they require use of vendor specific capabilities of the Ada compiler. They are currently written and tested under Rational Apex version 1.4.1. A port to some Ada compilers, such as the Verdix Ada compiler should be trivial while some others may be more involved.

FormBuilder is a software library developed at the INEL that provides the programmer with a high-level interface to a subset of the X Window system and the OSF/Motif widget set. The primary goal of the FormBuilder library is to assist the programmer in rapidly developing a OSF/Motif based Graphical User Interface (GUI). Through the use of the FormBuilder application programmers interface (API), the GUI programmer is afforded several distinct advantages over Motif programming. Among these advantages are a substantially reduced learning curve, more readable/maintainable/modifiable code, smaller, more efficient binaries, and reduced compile/link/debug time during development. Working in concert with the FormBuilder library is the FBGraphics library, a 2-dimensional graphics library that allows the programmer to perform graphical operations within certain FormBuilder windows. The FBGraphics library is based on the Xlib drawing routines and much like FormBuilder, its purpose is to provide the programmer with a simpler, more productive mechanism for producing the desired graphical output on the screen.

31331 (ESTSC–001037MLTPL00) **VHDL CONTROL ROUTER. VHDL Control Routing Simulator.** Venard, J. (Fermi Accelerator Lab., Batavia, IL (United States)). Fermi National Accelerator Lab., Batavia, IL (United States). 1 Mar 1994. Sponsored by USDOE, Washington, DC (United States). Source: ESTSC.

Description: MLT-PLTFM; Any sysem for which standard VND-VHDL; 1 Mag Tape.

The control router simulates a backplane consisting of up to 16 slot. Slot 0, reserved for a control module (cr-ctrl), generates the system clocks and provides the serial interface to the Gating Logic. The remaining 15 slots (1-15) contain routing modules (cr mod), each having up to 64 serial inputs and outputs with FIFOs. Messages to be transmitted to the Control Router are taken from text files. There are currently 17 such source files. In the model, the serial output of each source is connected to multiple receivers, so that there are 8 identical messages transmitted to the router for each message file entry.

31332 (ESTSC–001051SUN0000) **CAPS-2D. Casting Process Simulator 2D Mold Fill and Solidification.** Domanus, H.M. (Argonne National Laboratory, Argonne, Il, (United States)); Schmitt, R.C. Argonne National Lab., IL (United States). 1 Mar 1995. Sponsored by USDOE, Washington, DC (United States). Source: ESTSC.

Description: SUN; SunOS 4.1.3 with Open Windows 3.FORTRAN 77 with some VMS extensions (99%) and C (1%) plus UNIX System 5 Bourne shell scripts.;1 Tape.

The CaPS software is a tool used to setup, simulate, and examine the results from two-dimensional filling and solidification of a sand casting.

31333 (ESTSC–001059IBMPC00) **HOTSPOT. Gaussian Dispersion Model for Radioactive Materials.** Homann, S.G. (Lawrence Livermore National Lab., CA (United States)). Lawrence Livermore National Lab., CA (United States). Hazards Control Dept. 1 Mar 1995. Sponsored by USDOE, Washington, DC (United States). Source: RADIATION SHIELDING INFORMATION CENTER.

Description: IBM PC; The only operating system requirBORLAND TURBO PASCAL 7.0; 1 3.5 Diskette.

The HOTSPOT Health Physics codes were created to provide Health Physics personnel with a fast, field-portable calculational tool for evaluating accidents involving radioactive materials. HOTSPOT codes are a first-order approximation of the radiation effects associated with the atmospheric release of radioactive materials. HOTSPOT programs are reasonably accurate for a timely initial assessment. More importantly, HOTSPOT codes produce a consistent output for the same input assumptions and minimize the probability of errors associated with reading a graph incorrectly or scaling a universal nomogram during an emergency. Four general programs, PLUME, EXPLOSION, FIRE, and RESUSPENSION, calculate a downwind assessment following the release of radioactive material resulting from a continuous or puff release, explosive release, fuel fire, or an area contamination event. Other programs deal with the release of plutonium, uranium, and tritium to expedite an initial assessment of accidents involving nuclear weapons. Additional programs estimate the dose commitment from inhalation of any one of the radionuclides listed in the database of radionuclides, calibrate a radiation survey instrument for ground survey measurements, and screening of plutonium uptake in the Lung.

31334 (ESTSC–001060MC68H00) **SOLARTRAK. Solar Array Tracking Control.** Manish, A.B. (Sandia National Laboratory, Albuquerque, NM (United States)); Dudley, J. Sandia National Labs.,

Albuquerque, NM (United States). 1 Jun 1995. Sponsored by USDOE, Washington, DC (United States). Source: ESTSC.

Description: MOTOROLAMC68HC1; Solar Trak Control Board; C; 1 3.5 Diskette. Various assemble-time options are available with the software for the Control Board. The software is formatted for the 2500AD Ver 4.05e assembler (not provided). The User-Board software is written in C format for the Intermetrics Whitesmith C compiler version 3.32.10 (not provided).

SolarTrak used in conjunction with various versions of 68HC11-based SolarTrack hardware boards provides control system for one or two axis solar tracking arrays. Sun position is computed from stored position data and time from an on-board clock/calendar chip. Position feedback can be by one or two offset motor turn counter square wave signals per axis, or by a position potentiometer. A limit of 256 counts resolution is imposed by the on-board analog to digital (A/D) convertor. Control is provided for one or two motors. Numerous options are provided to customize the controller for specific applications. Some options are imposed at compile time, some are setable during operation. Software and hardware board designs are provided for Control Board and separate User Interface Board that accesses and displays variables from Control Board. Controller can be used with range of sensor options ranging from a single turn count sensor per motor to systems using dual turn-count sensors, limit sensors, and a zero reference sensor. Dual axis trackers oriented azimuth elevation, east west, north south, or polar declination can be controlled. Misalignments from these orientations can also be accommodated. The software performs a coordinate transformation using six parameters to compute sun position in misaligned coordinates of the tracker. Parameters account for tilt of tracker in two directions, rotation about each axis, and gear ration errors in each axis. The software can even measure and compute these prameters during an initial setup period if current from a sun position sensor or output from photovoltaic array is available as an anlog voltage to the control board's A/D port. Wind or emergency stow to aj present position is available triggered by digital or analog signals. Night stow is also available. Tracking dead band is adjustable from narrow to wide. Numerous features of the hardware and software conserve energy for use with battery powered systems.

31335 (ETDE/CH-mf–95787322, pp. 99-102) **Suppression of higher harmonics in nonlinear periodically driven stochastic systems.** Talkner, P. (Paul Scherrer Inst. (PSI), Villigen (Switzerland)); Jung, P. Paul Scherrer Inst. (PSI), Villigen (Switzerland). 1995. In *Paul Scherrer Institut annual report 1994. Annex V: PSI general energy technology newsletter 1994.* 123p. Source: OSTI; NTIS.

We consider the generation of higher harmonics in periodically driven noisy nonlinear systems. Recent numerical studies of higher harmonics in such systems have shown so-called noise induced resonances that manifest themselves in a strong suppression of higher harmonics at certain values of the noise level. A theory of this peculiar phenomenon is presented, unmasking the universal character of these resonances and their widespread occurrence. (author) 2 figs., 9 refs.

31336 (INEL–94/00081) **Investigation of Newton-Krylov algorithms for low Mach number compressible flow.** McHugh, P.R.; Knoll, D.A.; Mousseau, V.A.; Hansen, G.A. Idaho National Engineering Lab., Idaho Falls, ID (United States). [1995]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-94ID13223. (CONF-950853–7: ASME/JSME annual summer meeting of the Fluids Engineering conference, Hilton Head, SC (United States), 13-17 Aug 1995). Order Number DE96001622. Source: OSTI; NTIS; GPO Dep.

Fully coupled Newton-Krylov algorithms are used to solve steady speed compressible flow past a backward facing step flow Mach and Reynolds numbers. Various preconditioned Krylov iterative methods are used to solve the linear systems that arise on each Newton step, specifically Lanczos-based and Arnoldi-based algorithms. Several preconditioning strategies are considered to improve the performance of these iterative techniques, including incomplete lower-upper factorization with various levels of fill-in [ILU(k)] and domain based additive and multiplicative Schwarz type preconditioning both with and without overlapping domains. The ILU(K) preconditioners were generally less reliable for lower values of the flow Mach number, and exhibited strong sensitivity to cell ordering. In addition, the parallel nature of the domain based preconditioners is exploited on both a shared memory computer and a distributed system of workstations. Important aspects of the numerical solutions are discussed.

31337 (KRC–92H-J02) **An Improvement of the Numerical Analysis Program and Experimental Study for the Foundation of Rotating machine.** Lee, J.R. (Korea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center); Lee, D.S.; Seo, Y.P.; Jeon, K.S.; Son, Y.S.; Cho, C.H.; Kim, K.H.; Kim, S.H.; Ku, K.O.; Chang, W.S.; Choi, M.S.; Hwang, K.H.; Cho, K.H.; Han, S.H.; Chang, S.P.; IKorea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center. 1993. 225p. (In Korean). Order Number DE96703596. Source: OSTI; NTIS (US Sales Only).

The turbine-generator foundation is one of major structure in power plants and is a very precise civil structure. The technology for design of foundation has been developed to reduce the transmitted loads due to the eccentricity of rotors into substructures such as column, mats, soil so on. As a result, the sets of spring are placed between the upper deck and the end of columns, which represents the low-tuned spring foundation. However, the transmission of loads from substructures to machine in case of earthquake or blasting loads has not been well described experimentally. Using the shaking table we have hence tested the one tenth reduced scale models of spring mounted turbine-generator foundation whose prototype is the T/G foundation of Ulsan fossile power plant. The scale of model has been determined by considering the sizes of prototype(41.5x14x12m) and that of shaking table(4x4m). In order to perform the project successfully, we have studied the followings; -Preparation of the background theory for computer program -Design and construction of model -Experimental tests by using shaking table -Comparison of theoretical with experimental results. (author). 22 refs., fig.

31338 (LA–13031-MS) **An analysis of containment, surveillance, and authentication for software.** Hunteman, W.J. Los Alamos National Lab., NM (United States). Sep 1995. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE96001358. Source: OSTI; NTIS; GPO Dep.

The "Protection, Containment, Surveillance, and Authentication (PCSA)" software was evaluated. The purpose of the evaluation was to determine the effectiveness of PCSA software in meeting the goals of a cost-effective, non-intrusive method for software authentication. Conclusions from the evaluation include (1) Commercially available software should be evaluated for the ability to provide the necessary control of access to and use of a PC. (2) The proposed software authentication methodology is not a cost-effective solution for the Agency and should be abandoned.

31339 (LA-SUB–95-60) **Summer 1994 Computational Science Workshop. Final report.** Los Alamos National Lab., NM (United States); New Mexico Univ., Albuquerque, NM (United States). Dept. of Electrical and Computer Engineering. [1994]. 47p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. LANL-Subcontract-9-XU0-D1200-1. Order Number DE95016515. Source: OSTI; NTIS; GPO Dep.

This report documents the work performed by the University of New Mexico Principal Investigators and Research Assistants while hosting the highly successful Summer 1994 Computational Sciences Workshop in Albuquerque on August 6–11, 1994. Included in this report is a final budget for the workshop, along with a summary of the participants' evaluation of the workshop. The workshop proceeding have been delivered under separate cover. In order to assist in the organization of future workshops, we have also included in this report detailed documentation of the pre- and post-workshop activities associated with this contract. Specifically, we have included a section that documents the advertising performed, along with the manner in which applications were handled. A complete list of the workshop participants in this section. Sample letters that were generated while dealing with various commercial entities and departments at the University are also included in a section

dealing with workshop logistics. Finally, we have included a section in this report that deals with suggestions for future workshops.

31340 (LA-SUB–95-161) **Parallel computation of large least squares problems involving Kronecker products on the Connection Machine 5.** Fulton, C.T. (Florida Inst. of Tech., Melbourne, FL (United States). Dept. of Applied Mathematics); Wu, L. Los Alamos National Lab., NM (United States); Florida Inst. of Tech., Melbourne, FL (United States). Dept. of Applied Mathematics. Jul 1995. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Contract 1030N0014-9H. Order Number DE96000858. Source: OSTI; NTIS; GPO Dep.

The authors present in this paper the implementation and some timing results for a Data Parallel Version of a Kronecker Product Least Squares Code on the Connection Machine 5.

31341 (LA-SUB–95-178) **Development of out-of-core fast Fourier transform software for the connection machine. Final report.** Sweet, R. (Univ. of Colorado, Denver, CO (United States). Center for Computational Mathematics); Wilson, J. Los Alamos National Lab., NM (United States); Colorado Univ., Denver, CO (United States). Center for Computational Mathematics. [1995]. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE96000857. Source: OSTI; NTIS; GPO Dep.

This report describes the algorithm and implementation of an out-of-core Fast Fourier Transform routine for the Thinking Machines Corp. CM-5 parallel computer. The software has the capability of transforming multi-dimensional arrays that are both real and complex.

31342 (LA-UR–95-906) **Towards heterogeneous distributed debugging.** Damodaran-Kamal, S.K. Los Alamos National Lab., NM (United States). [1995]. 30p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-951207–1: ACM/IEEE-CS supercomputing conference, San Diego, CA (United States), 4-8 Dec 1995). Order Number DE95009427. Source: OSTI; NTIS; GPO Dep.

Several years of research and development in parallel debugger design have given up several techniques, though implemented in a wide range of tools for an equally wide range of systems. This paper is an evaluation of these myriad techniques as applied to the design of a heterogeneous distributed debugger. The evaluation is based on what features users perceive as useful, as well as the ease of implementation of the features using the available technology. A preliminary architecture for such a heterogeneous tool is proposed. Our effort in this paper is significantly different from the other efforts at creating portable and heterogeneous distributed debuggers in that we concentrate on support for all the important issues in parallel debugging, instead of simply concentrating on portability and heterogeneity.

31343 (LA-UR–95-994) **High-speed connections for storage systems; HIPPI, fibre channel, and ATM: Whats happening?** Tolmie, D.E. Los Alamos National Lab., NM (United States). [1995]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-951207–4: ACM/IEEE-CS supercomputing conference, San Diego, CA (United States), 4-8 Dec 1995). Order Number DE95009415. Source: OSTI; NTIS; GPO Dep.

Contains article by D.E. Tolmie, A.G. Dornhoff, A.G. and A.J. DuBois: An ATM-based workstation cluster driving a HIPPI-based HDTV frame buffer.

A group of eight Digital Equipment Corporation Alpha workstations is interconnected with ATM to form a cluster with supercomputer power. For output, each workstation drives a single "tile" on an 8-tile high-resolution frame buffer. A special purpose adapter is used to convert the workstation's ATM format to the frame buffer's HIPPI format. This paper discusses the rationale behind the workstation farm, and then describes the visualization output path in detail. To provide the system quickly, special emphasis was placed on making the design as simple as possible. The design choices are examined, and the resultant system is described. The oral presentation will include operational experiences.

31344 (LA-UR–95-1108) **UNICORN: Misuse detection for UNICOS.** Christoph, G.G; Jackson, K.A.; Neuman, M.C.; Siciliano, C.L.B.; Simmonds, D.D.; Stallings, C.A.; Thompson, J.L. Los Alamos National Lab., NM (United States). 29 Mar 1995. 22p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-951207–3: ACM/IEEE-CS supercomputing conference, San Diego, CA (United States), 4-8 Dec 1995). Order Number DE95009488. Source: OSTI; NTIS; GPO Dep.

An effective method for detecting computer misuse is the automatic auditing and analysis of on-line user activity. This activity is reflected in the system audit record, by changes in the vulnerability posture of the system configuration, and in other evidence found through active testing of the system. In 1989 we started developing an automatic misuse detection system for the Integrated Computing Network (ICN) at Los Alamos National Laboratory. Since 1990 this system has been operational, monitoring a variety of network systems and services. We call it the Network Anomaly Detection and Intrusion Reporter, or NADIR. During the last year and a half, we expanded NADIR to include processing of audit and activity records for the Cray UNICOS operating system. This new component is called the UNICOS Real-time NADIR, or UNICORN. UNICORN summarizes user activity and system configuration information in statistical profiles. In near real-time, it can compare current activity to historical profiles and test activity against expert rules that express our security policy and define improper or suspicious behavior. It reports suspicious behavior to security auditors and provides tools to aid in follow-up investigations. UNICORN is currently operational on four Crays in Los Alamos' main computing network, the ICN.

31345 (LA-UR–95-1127) **Beyond the CM-5: A case study in performance analysis for the CM-5, T3D, and high performance RISC workstations.** Beazley, D.M. (Utah Univ., Salt Lake City, UT (United States). Dept. of Computer Science); Lomdahl, P.S. Los Alamos National Lab., NM (United States). 22 Mar 1995. 13p. Sponsored by USDOE, Washington, DC (United States);Institute of Electrical and Electronics Engineers, Inc., New York, NY (United States). DOE Contract W-7405-ENG-36. (CONF-951207–2: ACM/IEEE-CS supercomputing conference, San Diego, CA (United States), 4-8 Dec 1995). Order Number DE95009484. Source: OSTI; NTIS; GPO Dep.

We present a comprehensive performance evaluation of our molecular dynamics code SPaSM on the CM-5 in order to devise optimization strategies for the CM-5, T3D, and RISC workstations. In this analysis, we focus on the effective use of the SPARC microprocessor by performing measurements of instruction set utilization, cache effects, memory access patterns, and pipeline stall cycles. We then show that we can account for more than 99% of observed execution time of our program. Optimization strategies are devised and we show that our highly optimized ANSI C program running only on the SPARC microprocessor of the CM-5 is only twice as slow as our Gordon-Bell prize winning code that utilized the CM-5 vector units. On the CM-5E, we show that this optimized code run faster than the vector unit version. We then apply these techniques to the Cray T3D and measure resulting speedups. Finally, we show that simple optimization strategies are effective on a wide variety of high performance RISC workstations.

31346 (LA-UR–95-1296) **Wide-area Gigabit networking: Los Alamos HIPPI-SONET Gateway.** St. John, W.B.; DuBois, D.H. Los Alamos National Lab., NM (United States). [1995]. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-951207–5: ACM/IEEE-CS supercomputing conference, San Diego, CA (United States), 4-8 Dec 1995). Order Number DE95010877. Source: OSTI; NTIS; GPO Dep.

This paper describes a HIPPI-SONET Gateway which has been designed by members of the Computer Network Engineering Group at Los Alamos National Laboratory. The Gateway has been used in the CASA Gigabit Testbed at Caltech, Los Alamos National Laboratory, and the San Diego Supercomputer Center to provide communications between the sites. This paper will also make some qualitative statements as to lessons learned during the deployment and maintenance of this wide area network. We report record throughput for transmission of data across a wide area network.

We have sustained data rates using the TCP/IP protocol of 550 Mbits/second and the rate of 792 Mbits/second for raw HIPPI data transfer over the 2,000 kilometers from the San Diego Supercomputer Center to the Los Alamos National Laboratory.

31347 (LA-UR–95-1766) **Parallel rendering techniques for massively parallel visualization.** Hansen, C.; Krogh, M.; Painter, J. Los Alamos National Lab., NM (United States). [1995]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9507166–1: Graphicon '95, St. Petersburg (Russian Federation), 5-7 Jul 1995). Order Number DE95015317. Source: OSTI; NTIS; GPO Dep.

As the resolution of simulation models increases, scientific visualization algorithms which take advantage of the large memory. and parallelism of Massively Parallel Processors (MPPs) are becoming increasingly important. For large applications rendering on the MPP tends to be preferable to rendering on a graphics workstation due to the MPP's abundant resources: memory, disk, and numerous processors. The challenge becomes developing algorithms that can exploit these resources while minimizing overhead, typically communication costs. This paper will describe recent efforts in parallel rendering for polygonal primitives as well as parallel volumetric techniques. This paper presents rendering algorithms, developed for massively parallel processors (MPPs), for polygonal, spheres, and volumetric data. The polygon algorithm uses a data parallel approach whereas the sphere and volume render use a MIMD approach. Implementations for these algorithms are presented for the Thinking Ma.chines Corporation CM-5 MPP.

31348 (LA-UR–95-1823) **A neural computation approach to the set covering problem.** Grossman, T. Los Alamos National Lab.. NM (United States). [1995]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9511123–1: Neural information processing systems, Denver, CO (United States), Nov 1995). Order Number DE95015316. Source: OSTI; NTIS; GPO Dep.

This paper presents a neural network algorithm which is capable of finding approximate solutions for unicost set covering problems. The network has two types of units (neurons), with different dynamics and activation functions. One type represents the objects to be covered (the rows in the matrix representation of the problem) and another represents the "covering" sets (the 0,1 variables). They are connected as a bipartite graph which represents the incidence relations between objects and sets (i.e the 0,1 adjacency matrix). When the parameters of the units are correctly tuned, the stable states of the system correspond to the minimal covers. I show that in its basic mode of operation, descent dynamics, when the network is set in an arbitrary initial state it converges in less than 2n steps (where n is the number of variables), to a stable state which represents a valid solution. In this mode, the network implements a greedy heuristic in which the choice function is based on the unit inputs (which are determined by the activation functions and the network state). On top of the basic network dynamics, the algorithm applies an adaptive restart procedure which helps to search more effectively for "good" initial states and results in better performance.

31349 (LA-UR–95-2836) **Quantum crytography over 14km of installed optical fiber.** Hughes, R.J.; Luther, G.G.; Morgan, G.L.; Simmons, C. Los Alamos National Lab., NM (United States). [1995]. 10p. Sponsored by Defense Nuclear Agency, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9506238–2: 7. Rochester conference on coherence and quantum optics, Rochester, NY (United States), 7-10 Jun 1995). Order Number DE96000012. Source: OSTI; NTIS; GPO Dep.

We have made the first demonstration that low error rate quantum cryptography over long distances (14km) of installed optical fiber in a real-world environment, subject to uncontrolled temperature and mechanical influences, representing an important new step towards incorporation of quantum cryptography into existing information security systems. We also point out that the high visibility single-photon interference in our experiment allows us to infer a test of the superposition principle of quantum mechanics: a photon reaching the detector has traveled over 14km of optical fiber in a wavepacket comprising a coherent superposition of two components that are spatially separated by about 2m. In principle, there are decoherence processes (or even possible modifications of quantum mechanics) that could cause the photon's wavefunction to collapse into one component or the other during propagation, leading to a reduction in visibility. However, our results are consistent with no such loss of quantum coherence during the 67-μs propagation time.

31350 (LA-UR–95-2925) **Network improvement problems.** Krumke, S.O. (Univ. of Wuerzburg (Germany). Dept. of Computer Science); Noltemeier, H.; Drangmeister, K.U.; Marathe, M.V.; Ravi, S.S. Los Alamos National Lab., NM (United States). [1995]. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9501107–1: ACM symposium on discrete algorithms, Atlanta, GA (United States), Jan 1995). Order Number DE96000030. Source: OSTI; NTIS; GPO Dep.

The authors study budget constrained optimal network improvement problems. Such problems aim at finding optimal strategies for improving a network under some cost measure subject to certain budget constraints. As an example, consider the following prototypical problem: Let G = (V, E) be an undirected graph with two cost values L(e) and C(e) associated with each edge e, where L(e) denotes the length of e and C(e) denotes the cost of reducing the length of e by a unit amount. A reduction strategy specifies for each edge e, the amount by which L(e) is to be reduced. For a given budget B, the goal is to find a reduction strategy such that the total cost of reduction is at most B and the minimum cost tree (with respect to some measure M) under the modified L costs is the best over all possible reduction strategies which obey the budget constraint. Typical measures M for a tree are the total weight and the diameter. They provide both hardness and approximation results for the two measures M mentioned above. For the problem of minimizing the total weight of a spacing tree, they provide an algorithm that, for any fixed $\gamma, \varepsilon > 0$, finds a solution whose weight is at most $(1 + 1/\gamma)$ times that of a minimum length spanning tree plus an additive constant of at most ε and the total cost of improvement is at most $(1 + \gamma)$ times the budget B. This result can be extended to obtain approximation algorithms for more general network design problems considered in [GW, GG+94].

31351 (LA-UR–95-2971) **The ACL Message Passing Library.** Painter, J. (Los Alamos National Lab., NM (United States)); McCormick, P.; Krogh, M.; Hansen, C.; Colin de Verdiere, G. Los Alamos National Lab., NM (United States). [1995]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9509231–1: European T3D workshop, Lausanne (Switzerland), 7 Sep 1995). Order Number DE96000021. Source: OSTI; NTIS; GPO Dep.

This paper presents the ACL (Advanced Computing Lab) Message Passing Library. It is a high throughput, low latency communications library, based on Thinking Machines Corp.'s CMMD, upon which message passing applications can be built. The library has been implemented on the Cray T3D, Thinking Machines CM-5, SGI workstations, and on top of PVM.

31352 (LA-UR–95-3222) **New analysis technique for K-edge densitometry spectra.** Hsue, Sin-Tao; Collins, M.L. Los Alamos National Lab., NM (United States). [1995]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-950923–9: 5. international conference on facility-safeguards interface, Jackson Hole, WY (United States), 24-30 Sep 1995). Order Number DE96001469. Source: OSTI; NTIS; INIS; GPO Dep.

A method for simulating absorption edge densitometry has been developed. This program enables one to simulate spectra containing any combination of special nuclear materials (SNM) in solution. The method has been validated with an analysis method using a single SNM in solution or a combination of two types of SNM separated by a Z of 2. A new analysis technique for mixed solutions has been developed. This new technique has broader applications and eliminates the need for bias correction.

31353 (LBL–36247) **Cautionary aphorisms for customer-oriented system development.** Stevens, D.F. (Lawrence Berkeley Lab., CA (United States). Information and Computing Sciences Div.). Lawrence Berkeley Lab., CA (United States). Oct 1994. 7p. Sponsored by USDOE, Washington, DC (United States). DOE

Contract AC03-76SF00098. (CONF-9502113–1: 1995 ACR conference on improving productivity in system development, Phoenix, AZ (United States), 6-10 Feb 1995). Order Number DE95006575. Source: OSTI; NTIS; GPO Dep.

Of the three substantive two-word clusters in the title of this note the least important is system development. Although people who attend conferences like this may be interested in system development, few other people are. Customers, in particular, are much more interested in system use, system availability, and system effectiveness, than in system development. Because it is the customers who keep one in business, it therefore behooves one to develop some techniques to keep use, availability, and effectiveness in mind–in other words, to develop a customer orientation. This note illustrates one such technique: the distillation of applicable wisdom concerning people, systems, and the relationships between them into statements made memorable by their wit, brevity, and pungency. In this session the author hopes to start one on the way to one's own collection of useful thoughts. It should be noted that the preparation of such a collection serves as a working demonstration of the value of re-use as a productivity principle: few of these statements are original with him, and many had origins in other applications. He considers in turn methodology and procedure, design, schedules, measurement, documentation, and quality.

31354 (LBL–36540) **Taking an object-oriented view of accelerators.** Nishimura, H. Lawrence Berkeley Lab., CA (United States). Apr 1995. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (LSGN–214; CONF-950512–321: Particle accelerator conference, Dallas, TX (United States), 1-5 May 1995). Order Number DE96000144. Source: OSTI; NTIS; GPO Dep.

It was almost a decade ago that accelerator experts were introduced to the concept of object-oriented programming. This new methodology was expected to play a key role in solving various software problems. Today, there seems be nothing that prevents us from taking advantage of this new technology. In fact, we are often forced to catch up with the computer industry's new standards. This is especially true for graphics programming. While evaluating the benefits of using this new technology, we must also evaluate whether it is as effective as it was claimed. In this paper, we discuss these issues based on experiences at the Advanced Light Source.

31355 (LBL–36775) **Methods of constructing a 3D geological model from scatter data.** Horsman, J.; Bethel, W. Lawrence Berkeley Lab., CA (United States). Apr 1995. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-9504204–1: Advanced visual systems conference, Boston, MA (United States), 19-21 Apr 1995). Order Number DE96000131. Source: OSTI; NTIS; GPO Dep.

Most geoscience applications, such as assessment of an oil reservoir or hazardous waste site, require geological characterization of the site. Geological characterization involves analysis of spatial distributions of lithology, porosity, etc. Because of the complexity of the spatial relationships, the authors find that a 3-D model of geology is better suited for integration of many different types of data and provides a better representation of a site than a 2-D one. A 3-D model of geology is constructed from sample data obtained from field measurements, which are usually scattered. To create a volume model from scattered data, interpolation between points is required. The interpolation can be computed using one of several computational algorithms. Alternatively, a manual method may be employed, in which an interactive graphics device is used to input by hand the information that lies between the data points. For example, a mouse can be used to draw lines connecting data points with equal values. The combination of these two methods presents yet another approach. In this study, the authors will compare selected methods of 3-D geological modeling. They used a flow-based, modular visualization environment (AVS) to construct the geological models computationally. Within this system, they used three modules, scat_3d, trivar and scatter_to_ucd, as examples of computational methods. They compare these methods to the combined manual and computational approach. Because there are no tools readily available in AVS for this type of construction, they used a geological modeling system to demonstrate this method.

31356 (LBL–37200, pp. 90-95) **A graphical interface to the TOUGH family of flow simulators.** O'Sullivan, M.J. (Univ. of Auckland (New Zealand)); Bullivant, D.P. Lawrence Berkeley Lab., CA (United States). Mar 1995. DOE Contract AC03-76SF00098. (CONF-9503110–: TOUGH 95: transport of unsaturated ground water and heat workshop, Berkeley, CA (United States), 20-22 Mar 1995). In *Proceedings of the TOUGH Workshop '95 Lawrence Berkeley Laboratory, Berkeley, California, March 20–22, 1995.* 380p. Order Number DE95014788. Source: OSTI; NTIS; GPO Dep.

A graphical interface for the TOUGH family of simulators is presented. The interface allows the user to graphically create or modify a computer model and then to graphically examine the simulation results. The package uses the X Window System, enabling it to be used on many computer platforms.

31357 (LBL–37200, pp. 265-270) **Use of TOUGH2 on small computers.** Antunez, E. (Lawrence Berkeley Laboratory, CA (United States)); Pruess, K.; Moridis, G. Lawrence Berkeley Lab., CA (United States). Mar 1995. DOE Contract AC03-76SF00098. (CONF-9503110–: TOUGH 95: transport of unsaturated ground water and heat workshop, Berkeley, CA (United States), 20-22 Mar 1995). In *Proceedings of the TOUGH Workshop '95 Lawrence Berkeley Laboratory, Berkeley, California, March 20–22, 1995.* 380p. Order Number DE95014788. Source: OSTI; NTIS; GPO Dep.

TOUGH2/PC has been tested extensively on different PC platforms (486-33, 486-66, Pentium-90), with encouraging results. TOUGH2 performance has also been tested in other 32-bit computers as the MacIntosh Quadra 800, and a workstation IBM RISC 6000. Results obtained with these machines are compared with PCs' performance. PC results for 3-D geothermal reservoir models are discussed, including: (a) a Cartesian; and (b) a geothermal reservoir model with 1,411 irregular grid blocks. Also discussed are the results of the TOUGH2-compiler performance tests conducted on small computer systems. Code modifications required to operate on 32-bit computers and its setup in each machine environment are described. It is concluded that in today's market PCs provide the best price/performance alternative to conduct TOUGH2 numerical simulations.

31358 (LBL–37200, pp. 271-276) **Graphical user interface for TOUGH/TOUGH2 - development of database, pre-processor, and post-processor.** Sato, Tatsuya (Geothermal Energy Research and Development Co., Ltd., Tokyo (Japan)); Okabe, Takashi; Osato, Kazumi. Lawrence Berkeley Lab., CA (United States). Mar 1995. DOE Contract AC03-76SF00098. (CONF-9503110–: TOUGH 95: transport of unsaturated ground water and heat workshop, Berkeley, CA (United States), 20-22 Mar 1995). In *Proceedings of the TOUGH Workshop '95 Lawrence Berkeley Laboratory, Berkeley, California, March 20–22, 1995.* 380p. Order Number DE95014788. Source: OSTI; NTIS; GPO Dep.

One of the advantages of the TOUGH/TOUGH2 (Pruess, 1987 and 1991) is the modeling using "free shape" polygonal blocks. However, the treatment of three-dimensional information, particularly for TOUGH/TOUGH2 is not easy because of the "free shape" polygonal blocks. Therefore, we have developed a database named "GEOBASE" and a pre/post-processor named "GEOGRAPH" for TOUGH/TOUGH2 on engineering work station (EWS). "GEOGRAPH" is based on the ORACLE* relational database manager system to access data sets of surface exploration (geology, geophysics, geochemistry, etc.), drilling (well trajectory, geological column, logging, etc.), well testing (production test, injection test, interference test, tracer test, etc.) and production/injection history."GEOGRAPH" consists of "Pre-processor" that can construct the three-dimensional free shape reservoir modeling by mouse operation on X-window and "Post-processor" that can display several kinds of two/three-dimensional maps and X-Y plots to compile data on "GEOBASE" and result of TOUGH/TOUGH2 calculation. This paper shows concept of the systems and examples of utilization.

31359 (LBL–37200, pp. 277-280) **Energy Science and Technology Software Center.** Kidd, E.M. Lawrence Berkeley Lab., CA (United States). Mar 1995. DOE Contract AC03-76SF00098. (CONF-9503110–: TOUGH 95: transport of unsaturated ground

water and heat workshop, Berkeley, CA (United States), 20-22 Mar 1995). In *Proceedings of the TOUGH Workshop '95 Lawrence Berkeley Laboratory, Berkeley, California, March 20–22, 1995.* 380p. Order Number DE95014788. Source: OSTI; NTIS; GPO Dep.

The Energy Science and Technology Software Center (ESTSC), is the U.S. Department of Energy's (DOE) centralized software management facility. It is operated under contract for the DOE Office of Scientific and Technical Information (OSTI) and is located in Oak Ridge, Tennessee. The ESTSC is authorized by DOE and the U.S. Nuclear Regulatory Commission (NRC) to license and distribute DOE-and NRC-sponsored software developed by national laboratories and other facilities and by contractors of DOE and NRC. ESTSC also has selected software from the Nuclear Energy Agency (NEA) of the Organisation for Economic Cooperation and Development (OECD) through a software exchange agreement that DOE has with the agency.

31360 (LBL–37200, pp. 281-286) **Experiences using multigrid for geothermal simulation.** Bullivant, D.P. (Univ. of Auckland (New Zealand)); O'Sullivan, M.J.; Yang, Z. Lawrence Berkeley Lab., CA (United States). Mar 1995. DOE Contract AC03-76SF00098. (CONF-9503110–: TOUGH 95: transport of unsaturated ground water and heat workshop, Berkeley, CA (United States), 20-22 Mar 1995). In *Proceedings of the TOUGH Workshop '95 Lawrence Berkeley Laboratory, Berkeley, California, March 20–22, 1995.* 380p. Order Number DE95014788. Source: OSTI; NTIS; GPO Dep.

Experiences of applying multigrid to the calculation of natural states for geothermal simulations are discussed. The modelling of natural states was chosen for this study because they can take a long time to compute and the computation is often dominated by the development of phase change boundaries that take up a small region in the simulation. For the first part of this work a modified version of TOUGH was used for 2-D vertical problems. A "test-bed" program is now being used to investigate some of the problems encountered with implementing multigrid. This is ongoing work. To date, there have been some encouraging but not startling results.

31361 (LBL–37200, pp. 299-304) **Diomres (k,m): An efficient method based on Krylov subspaces to solve big, dispersed, unsymmetrical linear systems.** de la Torre Vega, E. (Instituto de Investigaciones Electricas, Cuernavaca (Mexico)); Cesar Suarez Arriaga, M. Lawrence Berkeley Lab., CA (United States). Mar 1995. DOE Contract AC03-76SF00098. (CONF-9503110–: TOUGH 95: transport of unsaturated ground water and heat workshop, Berkeley, CA (United States), 20-22 Mar 1995). In *Proceedings of the TOUGH Workshop '95 Lawrence Berkeley Laboratory, Berkeley, California, March 20–22, 1995.* 380p. Order Number DE95014788. Source: OSTI; NTIS; GPO Dep.

In geothermal simulation processes, MULKOM uses Integrated Finite Differences to solve the corresponding partial differential equations. This method requires to resolve efficiently big linear dispersed systems of non-symmetrical nature on each temporal iteration. The order of the system is usually greater than one thousand its solution could represent around 80% of CPU total calculation time. If the elapsed time solving this class of linear systems is reduced, the duration of numerical simulation decreases notably. When the matrix is big ($N \geq 500$) and with holes, it is inefficient to handle all the system's elements, because it is perfectly figured out by its elements distinct of zero, quantity greatly minor than N^2. In this area, iteration methods introduce advantages with respect to gaussian elimination methods, because these last replenish matrices not having any special distribution of their nonzero elements and because they do not make use of the available solution estimations. The iterating methods of the Conjugated Gradient family, based on the subspaces of Krylov, possess the advantage of improving the convergence speed by means of preconditioning techniques. The creation of DIOMRES(k,m) method guarantees the continuous descent of the residual norm, without incurring in division by zero. This technique converges at most in N iterations if the system's matrix is symmetrical, it does not employ too much memory to converge and updates immediately the approximation by using incomplete orthogonalization and adequate restarting. A preconditioned version of DIOMRES was applied to problems related to unsymmetrical systems with 1000 unknowns and less than five terms per equation. We found that this technique could reduce notably the time needful to find the solution without requiring memory increment. The coupling of this method to geothermal versions of MULKOM is in process.

31362 (NEDO-IT–9301) **Investigation of the human interface related technology. 2.** New Energy and Industrial Technology Development Organization, Tokyo (Japan). Mar 1994. 117p. (In Japanese). Sponsored by New Energy and Industrial Technology Development Organization, Tokyo (Japan). Order Number DE96704375. Source: OSTI; NTIS; Available from New Energy and Industrial Technology Development Organization, Sunshine 60, 30F 1-1, 3-chome, Higashi-Ikebukuro, Toshima-ku, Tokyo, Japan.

For the purpose of examining how to cope with the virtual reality (VR) technology which constitutes a new basic technology, investigations were made to study research and development centering about the U.S. and to consider its future. The contents are broken down by technological fields of involving research and development, to reveal that items covering the generation of artificial space or interfaces with man are particularly large in number, occupying 20 to 30 percent. The second largest are the number of items dealing with robot-aided generation of artificial space, occupying approximately 15 percent. The field of the explication of man, remarkably featuring the VR studies in the U.S., and occupies 14 percent. Research and development regarding artificial space sharing is in progress surefootedly although there is some difference between Japan and the U.S. in approaching the task. As for alignment between artificial spaces in the U.S., in many cases it is studied in relation to telerobotics. It has been concluded that VR is a natural human interface, so natural that it is not detected even when it is in use, and that every one of our acts in the future can be an object of VR. 9 figs., 10 tabs.

31363 (NIFS–341) **A new algorithm for differential-algebraic equations based on HIDM.** Watanabe, Tsuguhiro; Gnudi, G. National Inst. for Fusion Science, Nagoya (Japan). Feb 1995. 27p. Order Number DE96701294. Source: OSTI; NTIS; INIS.

A new algorithm is proposed to solve differential-algebraic equations. The algorithm is an extension of the algorithm of general purpose HIDM (higher order implicit difference method). A computer program named HDMTDV and based on the new algorithm is constructed and its high performance is proved numerically through several numerical computations, including index-2 problem of differential-algebraic equations and connected rigid pendulum equations. The new algorithm is also secular error free when applied to dissipationless dynamical systems. This nature is demonstrated numerically by computation of the Kepler motion. The new code can solve the initial value problem $O = L \{ \phi(x), [d\phi(x)]/dx, [d^2\phi(x)]/dx^2, x \}$, where L and ϕ are vectors of length N. The values of first or second derivatives of $\phi(x)$ are not always necessary in the equations. (author).

31364 (ORNL/TM–12811) **Experiences in effective use of Tcl/Tk.** Lee, R.W. Oak Ridge National Lab., TN (United States). Jun 1995. 100p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95017198. Source: OSTI; NTIS; GPO Dep.

Tcl/Tk (Toot Command Language and Tool Kit, pronounced "tickle tee-kay") is a scripting language supporting Motifm style X Window interfaces. It is extendible, allowing developers to embed additional functionality as commands in the language. However, the power and flexibility of the system leads to many variations or possibilities in its usage. We describe effective methods for taking advantage of Tcl/Tk to increase productivity and enhance the flexibility and adaptability of applications: writing simple Tcl/Tk scripts, extending the Tcl/Tk widget set, wrapping Tcl commands around existing classes and functions, and building Tcl/Tk and 3GL coprocesses. Examples are presented from working applications.

31365 (ORNL/TM–12986) **Performance of parallel computers for spectral atmospheric models.** Foster, I.T. (Argonne National Lab., IL (United States)); Toonen, B.; Worley, P.H. Oak Ridge National Lab., TN (United States). Jun 1995. 33p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95017310. Source: OSTI; NTIS; GPO Dep.

Massively parallel processing (MPP) computer systems use high-speed interconnection networks to link hundreds or thousands of RISC microprocessors. With each microprocessor having a peak performance of 100 Mflops/sec or more, there is at least the possibility of achieving very high performance. However, the question of exactly how to achieve this performance remains unanswered. MPP systems and vector multiprocessors require very different coding styles. Different MPP systems have widely varying architectures and performance characteristics. For most problems, a range of different parallel algorithms is possible, again with varying performance characteristics. In this paper, we provide a detailed, fair evaluation of MPP performance for a weather and climate modeling application. Using a specially designed spectral transform code, we study performance on three different MPP systems: Intel Paragon, IBM SP2, and Cray T3D. We take great care to control for performance differences due to varying algorithmic characteristics. The results yield insights into MPP performance characteristics, parallel spectral transform algorithms, and coding style for MPP systems. We conclude that it is possible to construct parallel models that achieve multi-Gflop/sec performance on a range of MPPs if the models are constructed to allow run-time selection of appropriate algorithms.

31366 (ORNL/TM–12999) **Redistribution of block-cyclic data distributions using MPI.** WSalker, D.W. (Oak Ridge National Lab., TN (United States)); Otto, S.W. Oak Ridge National Lab., TN (United States). Jun 1995. 29p. Sponsored by Department of the Army, Washington, DC (United States);National Science Foundation, Washington, DC (United States). DOE Contract AC05-84OR21400. DAAL03-91-C-0047; ASC-ASC-9005933. Order Number DE95017191. Source: OSTI; NTIS; GPO Dep.

Arrays that are distributed in a block cyclic fashion are important for many applications in the computational sciences since they often lead to parallel algorithms with good load balancing properties. We consider the problem of redistributing such an array to a new block size. This operation is directly expressible in High Performance Fortran (HPF) and will arise in applications written in this language. Efficient message passing algorithms are given for the redistribution operation, expressed in the standardized message passing interface, MPI. The algorithms are analyzed and performance results from the IBM SP-1 and Intel Paragon are given and discussed. The results show that redistribution can be done in time comparable to other collective communication operations, such as broadcast and MPI_ALLTOALL.

31367 (ORNL/TM–13060) **2-D image segmentation using minimum spanning trees.** Xu, Y.; Uberbacher, E.C. Oak Ridge National Lab., TN (United States). Sep 1995. 22p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE96000838. Source: OSTI; NTIS; GPO Dep.

This paper presents a new algorithm for partitioning a gray-level image into connected homogeneous regions. The novelty of this algorithm lies in the fact that by constructing a minimum spanning tree representation of a gray-level image, it reduces a region partitioning problem to a minimum spanning tree partitioning problem, and hence reduces the computational complexity of the region partitioning problem. The tree-partitioning algorithm, in essence, partitions a minimum spanning tree into subtrees, representing different homogeneous regions, by minimizing the sum of variations of gray levels over all subtrees under the constraints that each subtree should have at least a specified number of nodes, and two adjacent subtrees should have significantly different average gray-levels. Two (faster) heuristic implementations are also given for large-scale region partitioning problems. Test results have shown that the segmentation results are satisfactory and insensitive to noise.

31368 (SAND–95-0471C) **Emissive flat panel displays: A challenge to the AMLCD.** Walko, R.J. Sandia National Labs., Albuquerque, NM (United States). [1995]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-951033–8: 27. international technical conference of the Society for the Advancement of Material and Process Engineering (SAMPE): diversity into the next century, Albuquerque, NM (United States), 9-12 Oct 1995). Order Number DE95015081. Source: OSTI; NTIS; GPO Dep.

According to some sources, flat panel displays (FPDS) for computers will represent a $20-40B industry by the end of the decade and could leverage up to $100-200B in computer sales. Control of the flat panel display industry could be a significant factor in the global economy if FPDs manage to tap into the enormous audio/visual consumer market. Japan presently leads the world in active matrix liquid crystal display (AMLCD) manufacturing, the current leading FPD technology. The AMLCD is basically a light shutter which does not emit light on its own, but modulates the intensity of a separate backlight. However, other technologies, based on light emitting phosphors, could eventually challenge the @CD's lead position. These light-emissive technologies do not have the size, temperature and viewing angle limitations of AMLCDS. In addition, they could also be less expensive to manufacture, and require a smaller capital outlay for a manufacturing plant. An overview of these alternative technologies is presented.

31369 (SAND–95-1094C) **Using singular value decomposition to compute the conditioned cross-spectral density matrix and coherence functions.** Smallwood, D.O. Sandia National Labs., Albuquerque, NM (United States). 7 Aug 1995. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-9510195–3: 66. shock and vibration symposium, Biloxi, MS (United States), 31 Oct - 3 nov 1995). Order Number DE95016743. Source: OSTI; NTIS; GPO Dep.

It is shown that the usual method for computing the coherence functions (ordinary, partial, and multiple) for a general multiple-input/multiple-output problem can be expressed as a modified form of Cholesky decomposition of the cross spectral density matrix of the inputs and outputs. The modified form of Cholesky decomposition used is $G_{zz} = LCL'$, where G is the cross spectral density matrix of inputs and outputs, L is a lower; triangular matrix with ones on the diagonal, and C is a diagonal matrix, and the symbol ' denotes the conjugate transpose. If a diagonal element of C is zero, the off diagonal elements in the corresponding column of L are set to zero. It is shown that the results can be equivalently obtained using singular value decomposition (SVD) of G_{zz}. The formulation as a SVD problem suggests a way to order the inputs when a natural physical order of the inputs is absent.

31370 (SAND–95-1234C) **Understanding and managing risk in software systems.** Fletcher, S.K.; Jansma, R.; Lim, J.; Murphy, M.; Wyss, G. Sandia National Labs., Albuquerque, NM (United States). [1995]. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-951236–1: Computer security applications conference, New Orleans, LA (Luxembourg), 11-15 Dec 1995). Order Number DE95013833. Source: OSTI; NTIS; GPO Dep.

When software is used in safety-critical, security-critical, or mission-critical situations, it is imperative to understand and manage the risks involved. A risk assessment methodology and toolset have been developed which are specific to software systems. This paper describes the concepts of the methodology, with emphasis on the experience of designing a toolset to support the methodology. Also presented are results of applying the methodology to two real software-based products: the software toolset itself, and a network firewall.

31371 (SAND–95-1901C) **Application of the bootstrap to the analysis of vibration test data.** Hunter, N.F. (Los Alamos National Lab., NM (United States)); Paez, T.L. Sandia National Labs., Albuquerque, NM (United States). [1995]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-9510195–1: 66. shock and vibration symposium, Biloxi, MS (United States), 31 Oct - 3 nov 1995). Order Number DE95016742. Source: OSTI; NTIS; GPO Dep.

Structural dynamic testing is concerned with estimation of system properties, including frequency response functions and modal characteristics. These properties are derived from tests on the structure of interest, during which excitations and responses are measured and Fourier techniques are used to reduce the data. The inputs used in a test are frequently radom and excite random responses in the structure of interest. When these random inputs

and responses are analyzed they yield estimates of system properties that are random variable and random process realizations. Of course, such estimates of system properties vary randomly from one test to another, but even when deterministic inputs are used to excite a structure, the estimated properties vary from test to test. When test excitations and responses are normally distributed, classical techniques permit us to statistically analyze inputs, responses, and system parameters. However, when the input excitations are non-normal, the system is nonlinear, and/or the property of interest is anything but the simplest, the classical analyses break down. The bootstrap is a technique for the statistical analysis of data that are not necessarily normally distributed. It can be used to statistically analyze any measure of input excitation on response, or any system property, when data are available to make an estimate. It is designed to estimate the standard error, bias, and confidence intervals of parameter estimates. This paper shows how the bootstrap can be applied to the statistical analysis of modal parameters.

31372 (SAND–95-2134C) **Scalable end-to-end ATM encryption test results.** Pierson, L.G. Sandia National Labs., Albuquerque, NM (United States). [1995]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-9509232–1: Cray user group meeting, Fairbanks, AK (United States), 25-29 Sep 1995). Order Number DE96000723. Source: OSTI; NTIS; GPO Dep.

Customers of Asynchronous Transfer Mode (ATM) services may need a variety of data authenticity and privacy assurances. Cryptographic methods can be used to assure authenticity and privacy, but are hard to scale for implementation at high speed. The incorporation of these methods into computer networks can severely impact functionality, reliability, and performance. To study these trade-offs, a prototype encryptor/decryptor was developed. This effort demonstrated the viability of implementing certain encryption techniques in high speed networks. The research prototype processes ATM cells in a SONET OC-3 payload. This paper describes the functionality, reliability, security, and performance design tradeoffs investigated with the prototype.

31373 (SAND–95-2195C) **High performance computing at Sandia National Labs.** Cahoon, R.M.; Noe, J.P.; Vandevender, W.H. Sandia National Labs., Albuquerque, NM (United States). [1995]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-9509232–2: Cray user group meeting, Fairbanks, AK (United States), 25-29 Sep 1995). Order Number DE96000719. Source: OSTI; NTIS; GPO Dep.

Sandia's High Performance Computing Environment requires a hierarchy of resources ranging from desktop, to department, to centralized, and finally to very high-end corporate resources capable of teraflop performance linked via high-capacity Asynchronous Transfer Mode (ATM) networks. The mission of the Scientific Computing Systems Department is to provide the support infrastructure for an integrated corporate scientific computing environment that will meet Sandia's needs in high-performance and midrange computing, network storage, operational support tools, and systems management. This paper describes current efforts at SNL/NM to expand and modernize centralized computing resources in support of this mission.

31374 (SAND–95-2245C) **Power as a function of reliability.** Abate, M.L. (Sandia National Labs., Albuquerque, NM (United States)); McCabe, G.P.; Lynch, M.P. Sandia National Labs., Albuquerque, NM (United States). [1995]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-9508165–2: Joint statistical meetings, Orlando, FL (United States), 13-17 Aug 1995). Order Number DE96000685. Source: OSTI; NTIS; GPO Dep.

Many studies employ multiple measurement instruments such as human raters, observers, judges, or mechanical gauges to record subject data. It is well known that the consistency of these instruments, commonly called rater reliability, limits the extent to which conclusions should be drawn from the observed data. However, the degree to which rater reliability limits conclusions has traditionally been assessed in only subjective manners. In this paper, a method is developed for objectively quantifying the impact of rate reliability on the statistical analysis of data from a commonly used collection scheme. This method allows the inclusion of a reliability index in statistical power calculations and is an invaluable tool in the planning of experiments.

31375 (SLAC-PUB–95-6744) **Network management and performance monitoring at SLAC.** Logg, C.A.; Cottrell, R.L.A. Stanford Linear Accelerator Center, Menlo Park, CA (United States). [1995]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9503103–2: NetWorld and Interop '95, Las Vegas, NV (United States), 27-29 Mar 1995). Order Number DE95016511. Source: OSTI; NTIS; GPO Dep.

The physical network plant and everything attached to it, including the software running on "computers" and other peripheral devices is the **system**. Subjectively, the ultimate measurers of **system** performance are the users and their perceptions of the performance of their networked applications. The performance of a **system** is affected by the physical network plant (routers, bridges, hubs, etc.) as well as by every "computer" and peripheral device that is attached to it, and the software running on the computers and devices. Performance monitoring of a network must therefore include computer systems and services monitoring as well as monitoring of the physical network plant. This paper will describe how this challenge has been tackled at SLAC, and how, via the World Wide Web, this information is made available for quick perusal by concerned personnel and users.

31376 (UCRL-ID–114972-2, pp. 4, Paper 2) **Evaluating the ISDN line to deliver interactive multimedia experiences.** Michaels, D.K. (New Jersey Institute of Technology, NJ (United States)). Lawrence Livermore National Lab., CA (United States). 6 May 1994. DOE Contract W-7405-ENG-48. (CONF-9405328–Absts.: Science and Engineering Research Semester (SERS) student symposium, Livermore, CA (United States), 6 May 1994). In *SERS intership: Spring 1994 abstracts and research papers.* 195p. Order Number DE95014118. Source: OSTI; NTIS; GPO Dep.

We will use the 128 kilobit/sec ISDN connection from the Lawrence Livermore National Laboratory to the Livermore High School Math Learning Center to provide students there with interactive multimedia educational experiences. These experiences may consist of tutorials, exercises, and interactive puzzles to teach students' course material. We will determine if it is possible to store the multimedia files at LLNL and deliver them to the student machines via FTP as they are needed. An evaluation of the effect of the ISDN data rate is a substantial component of our research and suggestions on how to best use the ISDN line in this capacity will be given.

31377 (UCRL-ID–114972-2, pp. 9, Paper 12) **Creating an automated tool for measuring software cohesion.** Tutton, J.M. (California State Univ., Sacramento, CA (United States)); Zucconi, L. Lawrence Livermore National Lab., CA (United States). 6 May 1994. (CONF-9405328–Absts.: Science and Engineering Research Semester (SERS) student symposium, Livermore, CA (United States), 6 May 1994). In *SERS intership: Spring 1994 abstracts and research papers.* 195p. Order Number DE95014118. Source: OSTI; NTIS; GPO Dep.

Program modules with high complexity tend to be more error prone and more difficult to understand. These factors increase maintenance and enhancement costs. Hence, a tool that can help programmers determine a key factor in module complexity should be very useful. Our goal is to create a software tool that will automatically give a quantitative measure of the cohesiveness of a given module, and hence give us an estimate of the "maintainability" of that module. The Tool will use a metric developed by Professors Linda M. Ott and James M. Bieman. The Ott/Bieman metric gives quantitative measures that indicate the degree of functional cohesion using abstract data slices.

31378 (UCRL-ID–114972-2, pp. 14, Paper 9) **Genetic algorithms using SISAL parallel programming language.** Tejada, S. Lawrence Livermore National Lab., CA (United States). 6 May 1994. (CONF-9405328–Absts.: Science and Engineering Research Semester (SERS) student symposium, Livermore, CA (United States), 6 May 1994). In *SERS intership: Spring 1994 abstracts and research papers.* 195p. Order Number DE95014118. Source: OSTI; NTIS; GPO Dep.

Genetic algorithms are a mathematical optimization technique developed by John Holland at the University of Michigan [1]. The SISAL programming language possesses many of the characteristics desired to implement genetic algorithms. SISAL is a deterministic, functional programming language which is inherently parallel. Because SISAL is functional and based on mathematical concepts, genetic algorithms can be efficiently translated into the language. Several of the steps involved in genetic algorithms, such as mutation, crossover, and fitness evaluation, can be parallelized using SISAL. In this paper I will I discuss the implementation and performance of parallel genetic algorithms in SISAL.

31379 (UCRL-ID–119453) **Progress in sub-grid scale modeling of shock-turbulence interaction.** Buckingham, A.C. (Lawrence Livermore National Lab., CA (United States). Center for Advanced Fluid Dynamics Applications); Grun, J. Lawrence Livermore National Lab., CA (United States). Dec 1994. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE95017859. Source: OSTI; NTIS; GPO Dep.

The authors report on progress in the development of sub grid scale (SGS) closure relationships for the unresolved motion scales in compressible large eddy simulations (LES). At present they are refining the SGS model and overall LES procedure to include: a linearized viscoelastic model for finite thickness shock distortions and shocked turbulence field response; multiple scale asymptotic considerations to improve predictions of average near-wall surface behavior; and a spectral statistical model simulating the effects of high wave number stochastic feed-back from the unresolved SGS nonlinear motion influences on the explicitly resolved grid scale motions. Predicted amplification levels, modal energy partition, shock translational to turbulence kinetic energy transfer, and viscoelastic spatio-temporal response of turbulence to shock interaction are examined in comparison with available experimental evidence. Supplemental hypersonic compressible turbulence experimental information is developed from sub nanosecond interval pulsed shadowgraph evidence of laser impulse generated hypervelocity shocks interacting with intense, previously developed and carefully characterized initial turbulence. Accurate description of the influence of shock-turbulence interactions is vital for predicting their influence on: Supersonic/hypersonic flow field analysis, aerodynamic design, and aerostructural materials selection. Practical applications also include interior supersonic combustion analysis and combustion chamber design. It is also the essential foundation for accurately predicting the development and evolution of flow-field generated thermal and electromagnetic radiation important to hypersonic flight vehicle survivability, detection and communication.

31380 (UCRL-ID–120900) **Simulation of phase structures.** Lawson, J. Lawrence Livermore National Lab., CA (United States). 20 Apr 1995. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE96000330. Source: OSTI; NTIS; INIS; GPO Dep.

This memo outlines a procedure developed by the author to extract information from phase measurements and produce a simulated phase structure for use in modeling optical systems, including characteristic optics for the Beamlet and NIF laser systems. The report includes an IDL program listing.

31381 (UCRL-ID–121523) **A status report on the development of SAC2000: A new seismic analysis code.** Goldstein, P.; Minner, L. Lawrence Livermore National Lab., CA (United States). Aug 1995. 20p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE96000329. Source: OSTI; NTIS; GPO Dep.

We are developing a new Seismic Analysis Code (SAC2000) that will meet the research needs of the seismic research and treaty monitoring communities. Our first step in this development was to rewrite the original Seismic Analysis Code (SAC) – a Fortran code that was approximately 140,000 lines long – in the C programming language. This rewrite has resulted in a much more robust code that is faster, more efficient, and more portable than the original. We have implemented important processing capabilities such as convolution and binary monograms, and we have significantly enhanced several previously existing capabilities. For example, the spectrogram command now produces a correctly registered plot of the input time series and a color image of the output spectrogram. We have also added an image plotting capability with access to 17 predefined color tables or custom color tables. A rewritten version of the readcss command can now be used to access any of the documented css.3.0 database data formats, a capability that is particularly important to the Air Force Technical Applications Center (AFTAC) and the monitoring community. A much less visible, but extremely important contribution is the correction of numerous inconsistencies and errors that have evolved because of piecemeal development and limited maintenance since SAC was first written. We have also incorporated on-line documentation and have made SAC documentation available on the Internet via the world-wide-web at http://www-ep/tvp/sac.html.

31382 (UCRL-JC–119752) **Performance of a neutron transport code with full phase space decomposition on the Cray Research T3D.** Dorr, M.R.; Salo, E.M. Lawrence Livermore National Lab., CA (United States). Jan 1995. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-950420–32: International conference on mathematics and computations, reactor physics, and environmental analyses, Portland, OR (United States), 30 Apr - 4 may 1995). Order Number DE96000335. Source: OSTI; NTIS; INIS; GPO Dep.

We present performance results obtained on a 128-node Cray Research T3D computer by a neutron transport code implementing a standard mtiltigroup, discrete ordinates algorithm on a three-dimensional Cartesian grid. After summarizing the implementation strategy used to obtain a full decomposition of phase space (i.e., simultaneous parallelization of the neutron energy, directional and spatial variables), we investigate the scalability of the fundamental source iteration step with respect to each phase space variable. We also describe enhancements that have enabled performance rates approaching 10 gigaflops on the full 128-node machine.

31383 (UCRL-JC–119758) **Optimizing tertiary storage organization and access for spatio-temporal datasets.** Chen, L.T. (Lawrence Berkeley Lab., CA (United States)); Rotem, D.; Shoshani, A.; Drach, B.; Keating, M.; Louis, S. Lawrence Livermore National Lab., CA (United States). Feb 1995. 20p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9503106–3: Goddard conference on mass storage and technolgies, College Park, MD (United States), 28-30 Mar 1995). Order Number DE96000334. Source: OSTI; NTIS; GPO Dep.

We address in this paper data management techniques for efficiently retrieving requested subsets of large datasets stored on mass storage devices. This problem represents a major bottleneck that can negate the benefits of fast networks, because the time to access a subset from a large dataset stored on a mass storage system is much greater that the time to transmit that subset over a network. This paper focuses on very large spatial and temporal datasets generated by simulation programs in the area of climate modeling, but the techniques developed can be applied to other applications that deal with large multidimensional datasets. The main requirement we have addressed is the efficient access of subsets of information contained within much larger datasets, for the purpose of analysis and. interactive visualization. We have developed data partitioning techniques that partition datasets into "clusters" based on analysis of data access patterns and storage device characteristics. The goal is to minimize the number of clusters read from mass storage systems when subsets are requested. We emphasize in this paper proposed enhancements to current storage server protocols to permit control over physical placement of data on storage devices. We also discuss in some detail the aspects of the interface between the application programs and the mass storage system, as well as a workbench to help scientists to design the best reorganization of a dataset for anticipated access patterns.

31384 (UCRL-JC–119772-Rev.1) **The parallel I/O architecture of the high performance storage system (HPSS). Revision 1.** Watson, R.W. (Lawrence Livermore National Lab., CA (United States)); Coyne, R.A. Lawrence Livermore National Lab., CA (United States). Apr 1995. 20p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-950985–4-Rev.1: 14. Institute of Electrical and Electronics

Engineers (IEEE) symposium on mass storage systems, Monterey, CA (United States), 11-14 Sep 1995). Order Number DE95017813. Source: OSTI; NTIS; GPO Dep.

Datasets up to terabyte size and petabyte capacities have created a serious imbalance between I/O and storage system performance and system functionality. One promising approach is the use of parallel data transfer techniques for client access to storage, peripheral-to-peripheral transfers, and remote file transfers. This paper describes the parallel I/O architecture and mechanisms, Parallel Transport Protocol (PTP), parallel FTP, and parallel client Application Programming Interface (API) used by the High Performance Storage System (HPSS). Parallel storage integration issues with a local parallel file system are also discussed.

31385 (UCRL-JC–119787) **Nonlinear image filtering within IDP++.** Lehman, S.K.; Wieting, M.G.; Brase, J.M. Lawrence Livermore National Lab., CA (United States). 9 Feb 1995. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-950226–57: SPIE '95: SPIE conference on optics, electro-optics, and laser application in science, engineering and medicine, San Jose, CA (United States), 5-14 Feb 1995). Order Number DE96000331. Source: OSTI; NTIS; GPO Dep.

IDP++, image and data processing in C++, is a set of a signal processing libraries written in C++. It is a multi-dimension (up to four dimensions), multi-data type (implemented through templates) signal processing extension to C++. IDP++ takes advantage of the object-oriented compiler technology to provide "information hiding." Users need only know C, not C++. Signals or data sets are treated like any other variable with a defined set of operators and functions. We here some examples of the nonlinear filter library within IDP++. Specifically, the results of MIN, MAX median, α-trimmed mean, and edge-trimmed mean filters as applied to a real aperture radar (RR) and synthetic aperture radar (SAR) data set.

31386 (UCRL-JC–121510) **Verifying the secure setup of Unix client/servers and detection of network intrusion.** Feingold, R.; Bruestle, H.R.; Bartoletti, T.; Saroyan, A.; Fisher, J. Lawrence Livermore National Lab., CA (United States). Jul 1995. 18p. Sponsored by Department of Defense, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9510189–1: SPIE conference on photonic sensors and controls for commercial applications (Photonics East), Philadelphia, PA (United States), 22-26 Oct 1995). Order Number DE96000363. Source: OSTI; NTIS; GPO Dep.

This paper describes our technical approach to developing and delivering Unix host- and network-based security products to meet the increasing challenges in information security. Today's global "Infosphere" presents us with a networked environment that knows no geographical, national, or temporal boundaries, and no ownership, laws, or identity cards. This seamless aggregation of computers, networks, databases, applications, and the like store, transmit, and process information. This information is now recognized as an asset to governments, corporations, and individuals alike. This information must be protected from misuse. The Security Profile Inspector (SPI) performs static analyses of Unix-based clients and servers to check on their security configuration. SPI's broad range of security tests and flexible usage options support the needs of novice and expert system administrators alike. SPI's use within the Department of Energy and Department of Defense has resulted in more secure systems, less vulnerable to hostile intentions. Host-based information protection techniques and tools must also be supported by network-based capabilities. Our experience shows that a weak link in a network of clients and servers presents itself sooner or later, and can be more readily identified by dynamic intrusion detection techniques and tools. The Network Intrusion Detector (NID) is one such tool. NID is designed to monitor and analyze activity on an Ethernet broadcast Local Area Network segment and produce transcripts of suspicious user connections. NID's retrospective and real-time modes have proven invaluable to security officers faced with ongoing attacks to their systems and networks.

31387 (UCRL-JC–121616) **Programmable applications in a heterogeneous and concurrent environment.** Dubois, P.F. Lawrence Livermore National Lab., CA (United States). 21 Jul 1995. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9508167–1: Tools USA, Santa Barbara, CA (United States), 2 Aug 1995). Order Number DE95017868. Source: OSTI; NTIS; INIS; GPO Dep.

Equipe Basis (EB) is a new system for programmable applications which is under development at Lawrence Livermore Laboratory. EB is designed to permit user control of teams of interconnecting processes in a heterogeneous environment. Current systems work with programs written in Fortran or C on a single processor. The programs of the future will be in many languages and distributed over many processors. The object-oriented kernel can communicate data and commands between processes that are unaware of each other's inner structure. The programming language, Eiffel, is described. This document consists of extensive viewgraphs.

31388 (UCRL-JC–121635) **Application of optical interconnect technology at Lawrence Livermore National Laboratory.** Haigh, R.E.; Lowry, M.E.; McCammon, K.; Hills, R.; Mitchell, R.; Sweider, D. Lawrence Livermore National Lab., CA (United States). 10 Aug 1995. 5p. Sponsored by USDOE, Washington, DC (United States);Department of Defense, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9511106–2: IEEE MILCOM 95: military communications, San Diego, CA (United States), 5-8 Nov 1995). Order Number DE96000384. Source: OSTI; NTIS; GPO Dep.

Optical interconnects will be required to meet the information bandwidth requirements of future communication and computing applications. At Lawrence Livermore National Laboratory, the authors are involved in applying optical interconnect technologies in two distinct application areas: Multi-Gigabit/sec Computer Backplanes and Gigabit/sec Wide Area Networking using Wavelength Division Multiplexing. In this paper, the authors discuss their efforts to integrate optical interconnect technologies into prototype computing and communication systems.

31389 (UCRL-JC–121813) **An efficient algorithm for geocentric to geodetic coordinate conversion.** Toms, R.M. Lawrence Livermore National Lab., CA (United States). Sep 1995. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9509159–1: 8. international conference on parallel and distributed computing systems, Orlando, FL (United States), 20-23 Sep 1995). Order Number DE95017706. Source: OSTI; NTIS; GPO Dep.

The problem of performing transformations from geocentric to geodetic coordinates has received an inordinate amount of attention in the literature. Numerous approximate methods have been published. Almost none of the publications address the issue of efficiency and in most cases there is a paucity of error analysis. Recently there has been a surge of interest in this problem aimed at developing more efficient methods for real time applications such as DIS. Iterative algorithms have been proposed that are not of optimal efficiency, address only one error component and require a small but uncertain number of relatively expensive iterations for convergence. In this paper a well known rapidly convergent iterative approach is modified to eliminate intervening trigonometric function evaluations. A total error metric is defined that accounts for both angular and altitude errors. The initial guess is optimized to minimize the error for one iteration. The resulting algorithm yields transformations correct to one centimeter for altitudes out to one million kilometers. Due to the rapid convergence only one iteration is used and no stopping test is needed. This algorithm is discussed in the context of machines that have FPUs and legacy machines that utilize mathematical subroutine packages.

31390 (UCRL-JC–121819) **Using the bootstrap in a multivariadte data problem: An example.** Glosup, J.G.; Axelrod, M.C. Lawrence Livermore National Lab., CA (United States). 1 Aug 1995. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9508165–3: Joint statistical meetings, Orlando, FL (United States), 13-17 Aug 1995). Order Number DE96001320. Source: OSTI; NTIS; INIS; GPO Dep.

The use of the bootstrap in the multivariate version of the paired t-test is considered and demonstrated through an example. The problem of interest involves comparing two different techniques for

measuring the chemical constituents of an sample item. The bootstrap is used to form an empirical significance level for Hotelling's one-sample T-squared statistic. The bootstrap was selected to determine empirical significance levels because the implicit assumption of multivariate normality in the classic Hotelling's one-sample test night not hold. The results of both the classic and bootstrap test are presented and contrasted.

31391 (UCRL-LR–121544) **Efficient biased random bit generation for parallel processing.** Slone, D.M. Lawrence Livermore National Lab., CA (United States). 28 Sep 1994. 99p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE95017303. Source: OSTI; NTIS; GPO Dep.

A lattice gas automaton was implemented on a massively parallel machine (the BBN TC2000) and a vector supercomputer (the CRAY C90). The automaton models Burgers equation $\rho t + \rho\rho x = \nu\rho xx$ in 1 dimension. The lattice gas evolves by advecting and colliding pseudo-particles on a 1-dimensional, periodic grid. The specific rules for colliding particles are stochastic in nature and require the generation of many billions of random numbers to create the random bits necessary for the lattice gas. The goal of the thesis was to speed up the process of generating the random bits and thereby lessen the computational bottleneck of the automaton.

31392 (UCRL-MA–121327) **CombinePlt and CombineThs user manual: Merging multiple, processor-local plot and time-history data bases produced during a parallel calculation.** Procassini, R.J.; DeGroot, A.J. Lawrence Livermore National Lab., CA (United States). 1 Jun 1995. 21p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE95017806. Source: OSTI; NTIS; GPO Dep.

The CombinePlt and CombineThs post-processing utilities are designed to merge the data in multiple, processor-local plot and time-history data bases produced by the parallel versions of the analysis codes DYNA3D, NIKE3D or PING into a serial data base which is compatible with the existing versions of the GRIZ and THUG visualization tools. These utilities make use of the partition assignment file produced by the PartMesh suite of pre-processing utilities to map the data from the processor-local order to global order. These utilities are also capable of translating 64-bit IEEE data bases into 32-bit IEEE data bases which are required for post-processing with GRIZ or THUG on an SGI workstation.

DOE Contract FG02-90ER25084 ; AC02-76CH00016 ; AC05-84OR21400. From American Society of Mechanical Engineers' winter annual meeting; Chicago, IL (United States); 6-11 Nov 1994. Order Number DE95014045. Source: OSTI; NTIS; GPO Dep.

We report two aspects of a computational molecular dynamics study of large-scale problems on a distributed-memory MIMD parallel computer: (1) efficiency and scalability results on Intel Paragon parallel computers with up to 512 nodes and (2) a new method for dynamic load balancing.

31394 (DOE/EIA–95017628) **1995-1996 Strategic Plan.** US-DOE Energy Information Administration, Washington, DC (United States). [1995]. 16p. Sponsored by USDOE, Washington, DC (United States). Order Number DE95017628. Source: OSTI; NTIS; GPO Dep.

In a rapidly changing world, effective governmental organizations must anticipate and plan for the future. Nowhere is this more true than in the realm of information generation and dissemination. The Energy Information Administration (EIA) faces a future of great opportunity and also significant challenge. Technological advances are providing opportunities to improve our work processes and the way we serve our customers. This year's Strategic Plan was developed by an EIA Strategic Planning Group with a membership that spans the entire organization. The Strategic Plan provides both a broad vision and a clear map of EIA's near-term future. The Strategic Planning Group conducted an analysis of the strengths and weaknesses of EIA as an organization, and of the opportunities and constraints facing EIA in the future. Opportunities exist in the future in technological advances and staff training; constraints lie in federal budget trends and staff demographics. This will require a Strategic Plan that recognizes the need to prioritize services and products across EIA, standardize technology across EIA where possible, lead with fewer layers of management, and be acutely aware of customer needs. Developing and training EIA employees to meet the challenges of rapidly changing technology and decreasing budgets were given high priority.

31395 (IAEA-NDS–0(rev.95/7)) **Index to the IAEA-NDS-Documentation Series.** IAEA-NDS–Documentation Series, IAEA-NDS–Documentation Series. Lemmel, H.D. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Jul 1995. 20p. Order Number DE96602790. Source: OSTI; NTIS (US Sales Only); INIS.

This index lists the current versions of the IAEA-NDS-documents which summarize contents and format of nuclear data libraries available from the IAEA Nuclear Data Section. (author).

31396 (IAEA-NDS–7(rev.95/7)) **Index of nuclear data libraries available from the IAEA Nuclear Data Section.** IAEA-NDS–Documentation Series, IAEA-NDS–Documentation Series. Lemmel, H.D. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Jul 1995. 49p. Order Number DE96602791. Source: OSTI; NTIS (US Sales Only); INIS.

This document lists more than 100 nuclear data libraries together with references that give more detailed information about these libraries. The data libraries include neutron cross-sections, resonance parameters, fission-product yields, nuclear structure and decay data, gamma-rays from radionuclides, data of nuclear reactions induced by charged particles or heavy ions, photonuclear data, photoatomic interaction data, and many others, partly related data processing computer codes. All data and documentation references are available upon request from the IAEA Nuclear Data Section, free of charge on magnetic tape, PC diskettes, or online through the INTERNET computer network: either menu driven within the Nuclear Data Information System (NDIS), or through FTP file transfer. (author).

31397 (IAEA-NDS–150(rev.95/6)) **Online nuclear data service.** IAEA-NDS–Documentation Series, IAEA-NDS–Documentation Series. Dunford, C.L. (International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section); Burrows, T.W. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. 1995. 92p. Order Number DE96602789. Source: OSTI; NTIS (US Sales Only); INIS.

The US National Nuclear Data Center and the IAEA Nuclear Data Section offer online computer access through international networks to their nuclear-physics and photoatomic numeric databases, related bibliographic systems and other related information of interest to basic and applied research and technology. A detailed description of the access procedures, the technical requirements, and the available databases is given. (author).

31398 (INIS-mf–14601) **7. Seminar of the IIE-ININ-IMP on technological specialties. Topic 10: Information Services.** Instituto de Investigaciones Electricas, Cuernavaca (Mexico); Instituto Nacional de Investigaciones Nucleares, Mexico City (Mexico); Instituto Mexicano de Petroleo, Mexico City (Mexico). 1994. 123p. (In Spanish). (CONF-9409366–: 7. seminar of the IIE-ININ-IMP on technological specialities, Distrito Federal (Mexico), 7 Sep 1994). Order Number DE96602792. Source: OSTI; NTIS (US Sales Only); INIS.

The document includes 10 papers presented at the 7. Seminar of the IIE-IMP-ININ (Mexico) on technological specialities in the field of information services (Topic 10). Three items were in INIS subject scope and a separate abstract was prepared for each of them.

31399 (KRC–92A-J07) **The Development of a Pulse Code Modulation(PCM) Bandwidth Compression System.** Park, S.Y. (Korea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center); Moon, H.K.; Choi, H.Y.; Kim, J.S.; Jo, S.J.; Jong, D.K.; Kim, H.S.; Kim, D.G.; Ko, B.J.; Woo, B.H.; Han, Y.M.; Chung, U.S.; Yoo, J.S.; Char, D.S.; Chung, J.W.; LKorea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center. 1993. 179p. (In Korean). Order Number DE96703562. Source: OSTI; NTIS (US Sales Only).

In this project, considering the transmission characteristics of the pair cables between branch offices, the optimum communication methodology and capacity were chosen the best line coding scheme without repeaters is investigated, and finally, an efficient and economic prototype of the target communication system which is applicable to an ISDN is designed and implemented. The developed system can operate with a capacity of either five channels of voice data at 24 kbps or six channels consisting of three voice channels at 24 kbps and three data channels at 9.6 kbps. For several months, a variety of field tests and modifications on the prototype were carried out. (author). 28 refs., figs.

31400 (KRC–93A-T05) **Development and Application of the MMI System Using Speech Synthesis.** Lee, K.J. (Korea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center); Cho, H.K.; Kim, S.K.; Kim, M.H.; Kook, J.Y.; Yoon, M.W.; Cho, W.S.; Lee, W.H.; Chung, S.J.; Chang, W.B.; Kim, D.W.; Seo, J.I.; Lee, S.W.; Kim, D.I.; Park, J.H.; LKorea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center. 1994. 156p. (In Korean). Order Number DE96703565. Source: OSTI; NTIS (US Sales Only).

As a speech synthesis technique, phoneme-saving method that is more useful than conventional PCM method is studied and implemented. This method is useful for compression of sound and is possible to the combination of phoneme. In our system, Alarm signals are presented by graphical diagram. And expert system is developed by constructing the knowledge base and inference control algorithm. This expert system diagnoses the causes of the abnormal states, and display the alarm signal on the screen and generates the speech signal by using the speech synthesis technology. In MMI system, the various user services using pull-down method are provided and, the states of each channel are represented by bar chart and characters using visual information. MMI system consists of 3 subsystems that are speech synthesis subsystem, expert system subsystem, and user interface subsystem. And this system can be separated by 6 modules that are expert system module, data-saving module, printing module, input data updating module, display module, and help module. (author). 23 refs., figs.

31401 (KRC–93N-07) **A Planning Study for Integrated Database System of Nuclear Power Plant.** Hong, S.R. (Korea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center); Kim, M.K.; Kang, D.H.; Ju, B.D.; Park, C.K.; Ham, J.J.; Kim, T.Y.; Kim, K.Y.; Ham, S.W.; Chung, W.D.; Sung, T.Y.; Choi, S.Y.; Park, J.H.; Park, Y.H. Korea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center. 1994. 474p. (In Korean). Order Number DE96703601. Source: OSTI; NTIS (US Sales Only).

It has been established a long-term research program during 1992-2000 to build an integrated database system of nuclear power plant. In order to conduct the program effectively, a planning study was performed. The objective of the study is to clarify the scope of the database, propose its blueprint, and establish a development plan. It has been conducted a survey of domestic and overseas status of database systems used in nuclear industries, and the requirements of various organizations has been surveyed. Based on the survey results, a configuration of the integrated database has been constructed, and the scope of the database, application programs and computing environment have been proposed. The integrated database system is consisted of Plant Specific Database and enterprise-wide Database. The Objective of the integrated Database is to acquire country-wide information and process it to extract overall plant performance statistics which is similar to INPO's NPRDS or NUPEC's NUSIRC. The Plant Specific Database is similar to PUMAS/N, but strengthens the scope of its application and quality and depth of data. To implement the blueprint, a master plan for the long term development program has been developed. The target plants cover 9 operating units and 11 constructing/scheduled units. (author). 457 refs.

31402 (LA-SUB–95-99) **LANL environmental restoration site ranking system: System description. Final report.** Merkhofer, L. (Applied Decision Analysis, Inc., Menlo Park, CA (United States)); Kann, A.; Voth, M. Los Alamos National Lab., NM (United States); Applied Decision Analysis, Inc., Menlo Park, CA (United States). 13 Oct 1992. 160p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (ADA–92-2106). Order Number DE95017359. Source: OSTI; NTIS; INIS; GPO Dep.

The basic structure of the LANL Environmental Restoration (ER) Site Ranking System and its use are described in this document. A related document, Instructions for Generating Inputs for the LANL ER Site Ranking System, contains detailed descriptions of the methods by which necessary inputs for the system will be generated. LANL has long recognized the need to provide a consistent basis for comparing the risks and other adverse consequences associated with the various waste problems at the Lab. The LANL ER Site Ranking System is being developed to help address this need. The specific purpose of the system is to help improve, defend, and explain prioritization decisions at the Potential Release Site (PRS) and Operable Unit (OU) level. The precise relationship of the Site Ranking System to the planning and overall budget processes is yet to be determined, as the system is still evolving. Generally speaking, the Site Ranking System will be used as a decision aid. That is, the system will be used to aid in the planning and budgetary decision-making process. It will never be used alone to make decisions. Like all models, the system can provide only a partial and approximate accounting of the factors important to budget and planning decisions. Decision makers at LANL will have to consider factors outside of the formal system when making final choices. Some of these other factors are regulatory requirements, DOE policy, and public concern. The main value of the site ranking system, therefore, is not the precise numbers it generates, but rather the general insights it provides.

31403 (LA-SUB–95-125) **Library Services Alliance of New Mexico. 1994 Annual report.** Los Alamos National Lab., NM (United States); Sumner Associates (United States). [1995]. 50p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE95017812. Source: OSTI; NTIS; GPO Dep.

The Library Services Alliance is a unique multi-type library consortium committed to resource sharing. As a voluntary association of university and governmental laboratory libraries supporting scientific research, the Alliance has become a leader in New Mexico in using cooperative ventures to cost-effectively expand resources supporting their scientific and technical communities. During 1994, the alliance continued to expand on their strategic planning foundation to enhance access to research information for the scientific and technical communities. Significant progress was made in facilitating easy access to the on-line catalogs of member libraries via connections through the Internet. Access to Alliance resources is now available via the World Wide Web and Gopher, as well as links to other databases and electronic information. This report highlights the accomplishments of the Alliance during calendar year 1994.

31404 (LA-SUB–95-170) **Final report on the use of the modular-logic-nomenclature approach for the N-reactor probabilistic risk assessment.** Los Alamos National Lab., NM (United States); International Energy Associates Ltd., Albuquerque, NM (United States). 10 Jun 1986. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE96000854. Source: OSTI; NTIS; GPO Dep.

The N-Reactor probabilistic risk assessment adaption of the modular logic approach for fault tree modeling has led to the update of the master logic diagram (MLD) nomenclature to conform with a standard modular-logic-model-nomeclature format. This report describes the MLD nomenclature system and provides a listing of the updated MLD label codes, along with the original codes.

31405 (NEDO-IT–9308-Pt.1) **Investigation of inheritance of history of industrial technology. 1.** New Energy and Industrial Technology Development Organization, Tokyo (Japan). Mar 1994. 121p. (In Japanese). Order Number DE96704382. Source: OSTI; NTIS; Available from New Energy and Industrial Technology Development Organization, Sunshine 60, 30F 1-1, 3-chome, Higashi-Ikebukuro, Toshima-ku, Tokyo, Japan.

Basic investigation was conducted for the inheritance of industrial technology in the past and its creative utilization. The scope of investigation for fiscal 1992 was limited to cover some specific fields only, after considering what technology was creative and worth inheriting; that modern industrial technology is a highly specialized, complex system; and that it is near impossible to select creative and characteristic technology out of all the fields. As a result, the investigation was limited to cover only the car manufacturing of Toyota Motor Corporation, spinning of Toyoda Automatic Loom Works, Ltd., aerospace related activities of Mitsubishi Heavy Industries, Ltd., TV, electronic calculators, liquid crystal displays of Sharp Corporation, blast furnaces of Nippon Steel Corporation, turbines for ships of Kawasaki Heavy Industries Ltd., and the smeltering technology of Sumitomo Metal Industries, Ltd. The continuity of technology from pre-war days to post-war days and the different market conditions the businesses experienced after the war are reflected on the way each of the businesses had uniquely followed in the development of technology. A frank discussion of the efforts of engineers dealing with industry in a certain period and wrestling with the critical issues of society automatically built a way along which industrial technology will be inherited by the coming generation. A system is required whereunder historical data of industrial technology will be respected as public assets. 3 refs., 3 tabs.

31406 (NEDO-IT–9308-Pt.2) **Investigation of inheritance of history of industrial technology. 2.** New Energy and Industrial Technology Development Organization, Tokyo (Japan). Mar 1994. 107p. (In Japanese). Order Number DE96704383. Source: OSTI; NTIS; Available from New Energy and Industrial Technology Development Organization, Sunshine 60, 30F 1-1, 3-chome, Higashi-Ikebukuro, Toshima-ku, Tokyo, Japan.

For the inheritance of industrial technology in the past and to ensure its creative utilization, investigations were conducted into the current state of typical research information networks on the national and local level. In the process of development of industrial technology in Japan, local areas with their own peculiar traits assume very important roles. But, in such areas, important information about technology is being dissipated. As a typical network related to scientific and technological information, there exists the JOIS network of JICST, which enables the use of JICST-compiled literature and factual data base and other data bases JICST obtained from other organizations. In case of STN International of Germany, data base is a commonly owned property and each user can unlimitedly use the data bases belonging to other organizations. The Academic Information Center system offers information on books stored in university libraries and university-compiled data bases, and is equipped with the function of electronic mailing. In the Tsukuba Network the researchers living in Tsukuba Academic New Town are combined with each other by personal computer lines for performing information-related services. 41 figs., 10 tabs.

31407 (ORNL/TM–13055) **Groundwater, A century of word evolution.** Diefendorf, A.F. Oak Ridge National Lab., TN (United States). Aug 1995. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE96000315. Source: OSTI; NTIS; INIS; GPO Dep.

Environmental Sciences Division Publication No. 4446.

Words, especially those that apply directly to more than one discipline, often become the object of intense debate among professionals in those disciplines. This is particularly true with those people who have to deal with technical jargon on a day-to-day basis and who are concerned that scientific facts get communicated in as clear and concise a manner as possible. Communications regarding environmental restoration projects for the US Department of Energy are no exception. Lockheed Martin Energy Systems, Inc., its subcontractors and other prime contractors often disagree about the spelling and use of compound words. This frequently results in inconsistent spelling between project reports and incorrect spelling of referenced document titles. The following discussion is an attempt to provide an objective, in-depth examination of the evolution of one particular word and recommendations for its proper and consistent use. This discussion is the result of an extensive literature search conducted within the library system at Oak Ridge National Laboratory as well as the personal geologic libraries of the author and colleagues. The author has attempted to cite only those works produced by recognized names in the related disciplines or those works that constitute common references or glossaries.

31408 (PNL-SA–26339) **Development of a network-based information infrastructure to facilitate hydrosystems and fisheries planning in the Columbia-Snake River Basin.** Johnson, G.E.; Scheibe, T.D. Pacific Northwest Lab., Richland, WA (United States). Jul 1995. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830 ; AI79-86BP62611. (CONF-9507158–1: 12. office information technology conference, Augusta, GA (United States), 17-20 Jul 1995). Order Number DE95016816. Source: OSTI; NTIS; GPO Dep.

This report describes the development of an information-exchange system on the World Wide Web to aid balancing Columbia-Snake River Basin hydropower operations and passage optimization for endangered anadromous salmonids. During the 1995 fish migration season, a working prototype of the service is being evaluated with input and guidance from the Federal fisheries agencies. Lessons learned will be used to enhance the service's value and implement suggested changes for full-scale implementation during 1996 and ensuing years. Illustrations of the system's World Wide Web pages, and documentation of the service's fundamental concepts and methods, are included in the report.

31409 (SAND–95-0666C-Rev.) **Proposed DSS-specific fields for the generic authentication information element.** Tarman, T.D. Sandia National Labs., Albuquerque, NM (United States). 6 Aug 1995. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-9508147–2-Rev.: ATM Forum Technical Committee meeting, Toronto (Canada), 6 Aug 1995). Order Number DE95016091. Source: OSTI; NTIS; GPO Dep.

This contribution proposes the format of the "Algorithm-Specific Information" and "Signature" fields within the "Proposed Generic Authentication Information Element" for authentication IEs based on the Digital Signature Standard (DSS). These fields are designed to allow various levels of authentication "strength" (or robustness), and many of these fields may be omitted in systems that optimize authentication performance by sharing common (public) Digital Signature Algorithm (DSA) parameters. This allows users and site security officers to design their authenticated signaling according to site security and performance requirements.

31410 (SAND–95-2147C-Draft) **Public/private key certification authority and key distribution. Draft.** Long, J.P.; Christensen, M.J.; Sturtevant, A.P.; Johnston, W.E. Sandia National Labs., Albuquerque, NM (United States). 25 Sep 1995. 25p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-9509224–1-Draft: Joint meeting of Energy Science Coordinating Committee, Newport News, VA (United States), 28-29 Sep 1995). Order Number DE96000777. Source: OSTI; NTIS; GPO; GPO Dep.

Traditional encryption, which protects messages from prying eyes, has been used for many decades. The present concepts of encryption are built from that heritage. Utilization of modern software-based encryption techniques implies much more than simply converting files to an unreadable form. Ubiquitous use of computers and advances in encryption technology coupled with the use of wide-area networking completely changed the reasons for utilizing encryption technology. The technology demands a new and extensive infrastructure to support these functions. Full understanding of these functions, their utility and value, and the need for an infrastructure, takes extensive exposure to the new paradigm. This paper addresses issues surrounding the establishment and operation of a key management system (i.e., certification authority) that is essential to the successful implementation and wide-spread use of encryption.

31411 (UCRL-JC–20441) **Physical Volume Library deadlock avoidance in a striped media environment.** Deutsch, J.K. (IBM Government System, Houston, Texas (United States)); Gary, M.R. Lawrence Livermore National Lab., CA (United States). Mar 1995. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-950985–5: 14. Institute of Electrical and Electronics Engineers (IEEE) symposium on mass storage systems, Monterey, CA (United States), 11-14 Sep 1995). Order Number DE96001315. Source: OSTI; NTIS; GPO Dep.

Most modern high performance storage systems store data in large repositories of removable media volumes. Management of the removable volumes is performed by a software module known as a Physical Volume Library (PVL). To meet performance and scalability requirements, a PVL may be asked to mount multiple removable media volumes for use by a single client for parallel data transfer. Mounting sets of volumes creates an environment in which it impossible for multiple client requests to deadlock while attempting to gain access to storage resources. Scenarios leading to deadlock in a PVL include multiple client requests that contend for the same cartridge(s), and client requests that vie for a limited set of drive resources. These deadlock scenarios are further complicated by the potential for out-of-order volumes to be mounted (for example, by Automatic Cartridge Loaders or human operators). This paper begins by introducing those PVL requirements Which create the possibility of deadlock. Next we examine traditional approaches to deadlock resolution and how they might be applied in a PVL. This leads to a design for a PVL which addresses deadlock scenarios. Following the design presentation is a discussion of possible design enhancements. We end with a case study of an actual implementation of the PVL design in the High Performance Storage System (HPSS).

31412 (WHC-SA–2931-FP) **Information/records management defensible budgets for the 21st century.** DiLiberto, A.J.; Whittet, L.A. Westinghouse Hanford Co., Richland, WA (United States). Aug 1995. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. (CONF-950876–2: 19. annual symposium of the Nuclear Information Records Management Association, Washington, DC (United States), 27-30 Aug 1995). Order Number DE96001103. Source: OSTI; NTIS; GPO Dep.

This paper provides to the Nuclear Information and Records Management Association (NIRMA) members the skills, knowledge, and information needed to develop performance-based cost estimating. It includes a detailed basis of estimates to represent a work breakdown structure that is technically complete, fully documented, defensible to various external reviews, and validatable.

Corporate Author Index

This index lists the corporate authors responsible for issuing the documents in this publication which are identified primarily by report number. The corporate names are entered in standardized forms as defined in ETDE/PUB–3 (Rev.1), *International Energy: Research Organizations 1988–1992*. Each entry under a corporate name includes the document title and citation number. Three items of information may appear in parentheses: (1) an abbreviation to identify the document type, such as a report; (2) the country of publication, indicated by International Organization for Standardization (ISO) country code; and (3) the language of the document if non-English (R;CA;In French). Author affiliations are not listed in this index.

Modeling and analysis framework for core damage propagation during flow-blockage-initiated accidents in the advanced neutron source reactor at Oak Ridge National Laboratory, 20:29769 (RA;US)

Modeling and analysis of thermal-hydraulic response of uranium-aluminum reactor fuel plates under transient heatup conditions, 20:29765 (RA;US)
Modeling and numerical simulation of oscillatory two-phase flows, with application to boiling water nuclear reactors, 20:29663 (RA;US)
Modeling of heat and mass transfer processes during core melt discharge from a reactor pressure vessel, 20:29714 (RA;US)
Modeling of local steam condensation on walls in presence of non-condensable gases. Application to a loca calculation in reactor containment using the multidimensional geyser/tonus code, 20:29692 (RA;US)
Natural circulation analysis for the advanced neutron source reactor refueling process 11, 20:29570 (RA;US)
Natural circulation in a VVER reactor geometry: Experiments with the PACTEL facility and Cathare simulations, 20:29655 (RA;US)
Natural convection heat transfer on two horizontal cylinders in liquid sodium, 20:29685 (RA;US)
New model for burnout prediction in channels of various cross-section, 20:29751 (RA;US)
NRC review of passive reactor design certification testing programs: Overview, progress, and regulatory perspective, 20:29677 (RA;US)
Numerical Boron mixing studies for Loviisa Nuclear Power Plant, 20:29770 (RA;US)
Numerical determination of lateral loss coefficients for subchannel analysis in nuclear fuel bundles, 20:29757 (RA;US)
Numerical investigation of heat transfer in high-temperature gas-cooled reactors, 20:29724 (RA;US)
Numerical simulation of stratified shear flow using a higher order Taylor series expansion method, 20:29722 (RA;US)
On heat transfer characteristics of real and simulant melt pool experiments, 20:29653 (RA;US)
On the constitutive description of the microinteractions concept in steam explosions, 20:29701 (RA;US)
On the look-up tables for the critical heat flux in tubes (history and problems), 20:29752 (RA;US)
Overview of CSNI separate effects tests validation matrix, 20:29742 (RA;US)
Oxidation during reflood of reactor core with melting cladding, 20:29716 (RA;US)
Parametric numerical investigaion of natural convection in a heat-generating fluid with phase transitions, 20:29656 (RA;US)
Passive decay heat removal by natural air convection after severe accidents, 20:29654 (RA;US)
Physical modelling of a rapid boron dilution transient, 20:29763 (RA;US)
Plant data comparisons for Comanche Peak 1/2 main feedwater pump trip transient, 20:29668 (RA;US)
Problems in experimental and mathematical investigations of the accidental thermohydraulic processes in RBMK nuclear reactors, 20:29662 (RA;US)
PWR-related integral safety experiments in the PKL 111 test facility SBLOCA under beyond-design-basis accident conditions, 20:29761 (RA;US)
Quantitative code accuracy evaluation of ISP33, 20:29734 (RA;US)
Rapid depressurization event analysis in BWR/6 using RELAP5 and contain, 20:29672 (RA;US)
Rayleigh-Taylor instability of cylindrical jets with radial motion, 20:31232 (RA;US)
RBMK-LOCA-Analyses with the ATHLET-Code, 20:29669 (RA;US)
RELAP5 analyses of two hypothetical flow reversal events for the advanced neutron source reactor, 20:29743 (RA;US)
RELAP5 model to simulate the thermal-hydraulic effects of grid spacers and cladding rupture during reflood, 20:29747 (RA;US)
Results of international standard problem No. 36 severe fuel damage experiment of a VVER fuel bundle, 20:29715 (RA;US)
SBWR PCCS vent phenomena and suppression pool mixing, 20:29679 (RA;US)
Scaling for integral simulation of thermal-hydraulic phenomena in SBWR during LOCA, 20:29680 (RA;US)
Severe accident simulation at Olkiuoto, 20:29749 (RA;US)
Simulation of a beyond design-basis-accident with RELAP5/MOD3.1, 20:29671 (RA;US)
Simulation of decay heat removal by natural convection in a pool type fast reactor model-ramona-with coupled 1D/2D thermal hydraulic code system, 20:29687 (RA;US)
Simulation of the thermalhydraulic behavior of a molten core within a structure, with the three dimensions three components TOLBIAC code, 20:29718 (RA;US)
Small-break loss-of-coolant accidents in the updated PIUS 600 advanced reactor design, 20:29670 (RA;US)
Some thermohydraulics of closure head adapters in a 3 loops PWR, 20:29739 (RA;US)
SPES-2, an experimental program to support the AP600 development, 20:29760 (RA;US)
SPES-2, AP600 intergral system test S01007 2 inch CL to core make-up tank pressure balance line break, 20:29762 (RA;US)
Stability analysis of BWR nuclear-coupled thermal-hyraulics using a simple model, 20:29461 (RA;US)
Statistical parameter characteristics of gas-phase fluctuations for gas-liquid intermittent flow, 20:29512 (RA;US)
Study on mixed convective flow penetration into subassembly from reactor hot plenum in FBRs, 20:29683 (RA;US)
Study on severe accident fuel dispersion behavior in the advanced neutron source reactor at Oak Ridge National Laboratory, 20:29766 (RA;US)
The analysis of SCS return momentum effects on the RCS water level during mid-loop operations, 20:29750 (RA;US)
The effect of constraint on fuel-coolant interactions in a confined geometry, 20:29710 (RA;US)
The low-power low-pressure flow resonance in a natural circulation cooled boiling water reactor, 20:29463 (RA;US)
The mixing of particle clouds plunging into water, 20:29711 (RA;US)
The modeling of core melting and in-vessel corium relocation in the APRIL code, 20:29719 (RA;US)
The modelling of wall condensation with noncondensable gases for the containment codes, 20:29693 (RA;US)
The numerical methods for the development of the mixture region in the vapor explosion simulations, 20:29704 (RA;US)
The Phebus FP thermal-hydraulic analysis with Melcor, 20:29767 (RA;US)
The role of heater thermal response in reactor thermal limits during oscillartory two-phase flows, 20:29505 (RA;US)
The sensitivity analysis by adjoint method for the uncertainty evaluation of the CATHARE-2 code, 20:29728 (RA;US)
The sudden coalescene model of the boiling crisis, 20:29470 (RA;US)
Thermal-hydraulic behaviors of vapor-liquid interface due to arrival of a pressure wave, 20:29705 (RA;US)
Thermal-hydraulic instabilities in pressure tube graphite - moderated boiling water reactors, 20:29664 (RA;US)
Thermal-hydraulics of wave propagation and pressure distribution under hypothetical steam explosion conditions in the ANS reactor, 20:29768 (RA;US)
Turbulence prediction in two-dimensional bundle flows using large eddy simulation, 20:29511 (RA;US)
Turbulent mixed convection in vertical and inclined flat channels with aiding flows, 20:29510 (RA;US)
Two-phase flow instabilities in a vertical annular channel, 20:29661 (RA;US)
Two-phase flow stability structure in a natural circulation system, 20:29658 (RA;US)
Validation of advanced NSSS simulator model for loss-of-coolant accidents, 20:29748 (RA;US)
Validation of the THIRMAL-1 melt-water interaction code, 20:29745 (RA;US)
VIPRE modeling of VVER-1000 reactor core for DNB analyses, 20:29732 (RA;US)
Void fraction distribution in a heated rod bundle under flow stagnation conditions, 20:29756 (RA;US)
Water hammer phenomena occurring in nuclear power installations while filling horizontal pipe containing saturated steam with liquid, 20:29509 (RA;US)

Australian Nuclear Science and Technology Organisation, Lucas Heights, NSW (Australia)
Atmospheric tracer tests and assessment of a potential accident at the National Medical Cyclotron, Camperdown, NSW, Australia, 20:30637 (R;AU)
Coincidence-counting corrections for accidental coincidences, set dead time and intrinsic dead time, 20:29167 (R;AU)
Correction for intrinsic and set dead-time losses in radioactivity counting, 20:29168 (R;AU)
Derivation of a macroscale formulation for a class of nonlinear partial differential equations, 20:31312 (R;AU)
General aspects of meteorology and wind flow patterns at the National Medical Cyclotron site, Camperdown, NSW, Australia, 20:29184 (R;AU)
High sensitivity two filter radon/thoron detectors with a wire or nylon screen as a second filter, 20:30502 (R;AU)

Australian Radiation Lab., Melbourne, VIC (Australia)
Asian/Australasian region intercalibration and intercomparison programme for radon, thoron and daughters. Asian/Australasian region radon intercomparison, September 1987 - September 1988, 20:29169 (R;AU)
Dose received by radiation workers in Australia, 1991, 20:30819 (R;AU)
Particle sizing of airborne radioactivity field measurements at Olympic Dam, 20:30818 (R;AU)

Computational fluid dynamic analysis of a closure head penetration in a pressurized water reactor, 20:29644 (RA;US)
Computational modeling for hexcan failure under core distruptive accidental conditions, 20:29689 (RA;US)
Condensation during gravity driven ECC: Experiments with PACTEL, 20:29623 (RA;US)
Condensation heat transfer coefficient with noncondensible gases for heat transfer in thermal hydraulic codes, 20:29630 (RA;US)
Condensation in the presence of noncondensible gases: AP600 containment simulation, 20:29697 (RA;US)
Conjugate heat transfer analysis of multiple enclosures in prototype fast breeder reactor, 20:29688 (RA;US)
Containment atmosphere response to external sprays, 20:29691 (RA;US)
Correlation of critical heat flux data for uniform tubes, 20:29513 (RA;US)
Correlations between the disintegration of melt and the measured impulses in steam explosions, 20:29702 (RA;US)
Counter-current flow in a vertical to horizontal tube with obstructions, 20:29650 (RA;US)
Coupled calculation of the radiological release and the thermal-hydraulic behavior of a 3-loop PWR after a SGTR by means of the code RELAP5, 20:29755 (RA;US)
Cross-sectional void fraction distribution measurements in a vertical annulus two-phase flow by high speed X-ray computed tomography and real-time neutron radiography techniques, 20:29638 (RA;US)
Crust formation and its effect on the molten pool coolability, 20:29717 (RA;US)
Density wave oscillations of a boiling natural circulation loop induced by flashing, 20:29660 (RA;US)
Detailed thermal-hydraulic computation into a containment building, 20:29695 (RA;US)
Development and assessment of a modified version of RELAP5/MOD3, 20:29729 (RA;US)
Development of a graphical user interface for the TRAC plant/safety analysis code, 20:29725 (RA;US)
Development, implementation and assessment of specific, two-fluid closure laws for inverted-annular film-boiling, 20:29616 (RA;US)
Drift flux model as approximation of two fluid model for two phase dispersed and slug flow in tube, 20:29615 (RA;US)
Dynamics of shock wave propagation and interphase process in liquid-vapor medium, 20:29665 (RA;US)
Effect of subcooling and wall thickness on pool boiling from downward-facing curved surfaces in water, 20:29626 (RA;US)
Entropy analysis on non-equilibrium two-phase flow models, 20:29620 (RA;US)
Evaluation and assessment of reflooding models in RELAP5/Mod2.5 and RELAP5/Mod3 codes using Lehigh University and PSI-Neptun bundle experimental data, 20:29741 (RA;US)
Evaluation of a main steam line break with induced, multiple tube ruptures: A comparison of NUREG 1477 (Draft) and transient methodologies Palo Verde Nuclear Generating Station, 20:29666 (RA;US)
Evaluation of wrapper tube temperatures of fast neutron reactors using the TRANSCOEUR-2 code, 20:29686 (RA;US)
Experience using individually supplied heater rods in critical power testing of advanced BWR fuel, 20:29460 (RA;US)
Experimental assessment of computer codes used for safety analysis of integral reactors, 20:29746 (RA;US)
Experimental investigation of 150-KG-scale corium melt jet quenching in water, 20:29707 (RA;US)
Experimental simulation of the water cooling of corium spread over the floor of a BWR containment, 20:29721 (RA;US)
Experimental studies of thermal and chemical interactions between oxide and silicide nuclear fuels with water, 20:29709 (RA;US)
Experimental studies of thermal and chemical interactions between molten aluminum and water, 20:29712 (RA;US)
Experimental study of horizontal annular channels under non-developed conditions, 20:29631 (RA;US)

FARO base case post-test analysis by COMETA code, 20:29735 (RA;US)
FCI experiments in the corium/water system, 20:29708 (RA;US)
FIBWR2 evaluation of fuel thermal limits during density wave oscillaions in BWRs, 20:29659 (RA;US)
Flooding characteristics of gas-liquid two-phase flow in a horizontal U bend pipe, 20:29651 (RA;US)
Flooding of a large, passive, pressure-tube LWR, 20:29678 (RA;US)
Flow characteristics of Korea multi-purpose research reactor, 20:29569 (RA;US)
Free convective condensation in a vertical enclosure, 20:29696 (RA;US)
Further evaluation of the CSNI separate effect test activity, 20:29764 (RA;US)
General correlation for prediction of critical heat flux ratio in water cooled channels, 20:29507 (RA;US)
GEYSER/TONUS: A coupled multi-D lumped parameter code for reactor thermal hydraulics analysis in case of severe accidents, 20:29700 (RA;US)
Geysering in boiling channels, 20:29657 (RA;US)
Horizontal steam generator thermal-hydraulics, 20:29475 (RA;US)
Hydrogen behavior in ice condenser containments, 20:29698 (RA;US)
INJECT and the modeling of waste recycling processes, 20:28904 (RA;US)
Interaction between the radiative flux emitted by a corium melt and aerosols from corium/concrete interaction, 20:29713 (RA;US)
Interfacial shear stress in stratified flow in a horizontal rectangular duct, 20:29632 (RA;US)
Investigations on sump cooling after core melt down, 20:29690 (RA;US)
Investigations on the thermal-hydraulics of a natural circulation cooled BWR fuel assembly, 20:29464 (RA;US)
ISP33 standard problem on the PACTEL facility, 20:29759 (RA;US)
Large eddy simulation of mixing between hot and cold sodium flows - comparison with experiments, 20:29684 (RA;US)
Large-scale transport across narrow gaps in rod bundles, 20:29508 (RA;US)
Level tracking in detailed reactor simulations, 20:29727 (RA;US)
Local mesh refinement for incompressible fluid flow with free surfaces, 20:30341 (RA;US)
Local pressure gradients due to incipience of boiling in subcooled flows, 20:29614 (RA;US)
Measurement of the interaction between the flow and the free surface of a liquid, 20:29634 (RA;US)
Melcor benchmarking against integral severe fuel damage tests, 20:29744 (RA;US)
Methodology for the study of the boiling crisis in a nuclear fuel bundle, 20:29471 (RA;US)
Modeling and analysis framework for core damage propagation during flow-blockage-initiated accidents in the advanced neutron source reactor at Oak Ridge National Laboratory, 20:29769 (RA;US)
Modeling and analysis of thermal-hydraulic response of uranium-aluminum reactor fuel plates under transient heatup conditions, 20:29765 (RA;US)
Modeling and numerical simulation of oscillatory two-phase flows, with application to boiling water nuclear reactors, 20:29663 (RA;US)
Modeling of heat and mass transfer processes during core melt discharge from a reactor pressure vessel, 20:29714 (RA;US)
Modeling of local steam condensation on walls in presence of non-condensable gases. Application to a loca calculation in reactor containment using the multidimensional geyser/tonus code, 20:29692 (RA;US)
Natural circulation analysis for the advanced neutron source reactor refueling process 11, 20:29570 (RA;US)
Natural circulation in a VVER reactor geometry: Experiments with the PACTEL facility and Cathare simulations, 20:29655 (RA;US)
Natural convection heat transfer on two horizontal cylinders in liquid sodium, 20:29685 (RA;US)
New model for burnout prediction in channels of various cross-section, 20:29751 (RA;US)
NRC review of passive reactor design certification testing programs: Overview, progress, and regulatory perspective, 20:29677 (RA;US)
Numerical Boron mixing studies for Loviisa Nuclear Power Plant, 20:29770 (RA;US)
Numerical determination of lateral loss coefficients for subchannel analysis in nuclear fuel bundles, 20:29757 (RA;US)
Numerical investigation of heat transfer in high-temperature gas-cooled reactors, 20:29724 (RA;US)
Numerical modeling of condensation from vapor-gas mixtures for forced down flow inside a tube, 20:29627 (RA;US)
Numerical simulation of multi-dimensional two-phase flow based on flux vector splitting, 20:29642 (RA;US)
Numerical simulation of stratified shear flow using a higher order Taylor series expansion method, 20:29722 (RA;US)
On heat transfer characteristics of real and simulant melt pool experiments, 20:29653 (RA;US)
On the constitutive description of the microinteractions concept in steam explosions, 20:29701 (RA;US)
On the look-up tables for the critical heat flux in tubes (history and problems), 20:29752 (RA;US)
Overview of CSNI separate effects tests validation matrix, 20:29742 (RA;US)
Oxidation during reflood of reactor core with melting cladding, 20:29716 (RA;US)
Parametric numerical investigaion of natural convection in a heat-generating fluid with phase transitions, 20:29656 (RA;US)
Passive decay heat removal by natural air convection after severe accidents, 20:29654 (RA;US)
Physical modelling of a rapid boron dilution transient, 20:29763 (RA;US)
Plant data comparisons for Comanche Peak 1/2 main feedwater pump trip transient, 20:29668 (RA;US)
Predictions of bubbly flows in vertical pipes using two-fluid models in CFDS-FLOW3D code, 20:29622 (RA;US)
Problems in experimental and mathematical investigations of the accidental thermohydraulic processes in RBMK nuclear reactors, 20:29662 (RA;US)
Prospects for bubble fusion, 20:31189 (RA;US)
PWR-related integral safety experiments in the PKL 111 test facility SBLOCA under beyond-design-basis accident conditions, 20:29761 (RA;US)
Quantitative code accuracy evaluation of ISP33, 20:29734 (RA;US)
Quenching phenomena in natural circulation loop, 20:29633 (RA;US)
Rapid depressurization event analysis in BWR/6 using RELAP5 and contain, 20:29672 (RA;US)
Rayleigh-Taylor instability of cylindrical jets with radial motion, 20:31232 (RA;US)
RBMK-LOCA-Analyses with the ATHLET-Code, 20:29669 (RA;US)
Reflooding and boil-off experiments in a VVER-440 like rod bundle and analyses with the CATHARE code, 20:29649 (RA;US)
RELAP5 analyses of two hypothetical flow reversal events for the advanced neutron source reactor, 20:29743 (RA;US)
RELAP5 model to simulate the thermal-hydraulic effects of grid spacers and cladding rupture during reflood, 20:29747 (RA;US)
Resolution of thermal-hydraulic safety and licensing issues for the system 80+™ design, 20:29610 (RA;US)
Results of international standard problem No. 36 severe fuel damage experiment of a VVER fuel bundle, 20:29715 (RA;US)
SBWR PCCS vent phenomena and suppression pool mixing, 20:29679 (RA;US)
Scaling for integral simulation of thermal-hydraulic phenomena in SBWR during LOCA, 20:29680 (RA;US)
Severe accident simulation at Olkiuoto, 20:29749 (RA;US)
Simulation of a beyond design-basis-accident with RELAP5/MOD3.1, 20:29671 (RA;US)
Simulation of decay heat removal by natural convection in a pool type fast reactor model-ramona-with coupled 1D/2D thermal hydraulic code system, 20:29687 (RA;US)
Simulation of the thermalhydraulic behavior of a molten core within a structure, with the three dimensions three components TOLBIAC code, 20:29718 (RA;US)

Small-break loss-of-coolant accidents in the updated PIUS 600 advanced reactor design, 20:29670 (RA;US)
Some thermohydraulics of closure head adapters in a 3 loops PWR, 20:29739 (RA;US)
SPES-2, an experimental program to support the AP600 development, 20:29760 (RA;US)
SPES-2, AP600 intergral system test S01007 2 inch CL to core make-up tank pressure balance line break, 20:29762 (RA;US)
Stability analysis of BWR nuclear-coupled thermal-hyraulics using a simple model, 20:29461 (RA;US)
Statistical parameter characteristics of gas-phase fluctuations for gas-liquid intermittent flow, 20:29512 (RA;US)
Study of condensation heat transfer following a main steam line break inside containment, 20:29625 (RA;US)
Study on mixed convective flow penetration into subassembly from reactor hot plenum in FBRs, 20:29683 (RA;US)
Study on severe accident fuel dispersion behavior in the advanced neutron source reactor at Oak Ridge National Laboratory, 20:29766 (RA;US)
The analysis of SCS return momentum effects on the RCS water level during mid-loop operations, 20:29750 (RA;US)
The coolability limits of a reactor pressure vessel lower head, 20:29641 (RA;US)
The effect of constraint on fuel-coolant interactions in a confined geometry, 20:29710 (RA;US)
The low-power low-pressure flow resonance in a natural circulation cooled boiling water reactor, 20:29463 (RA;US)

Baseline risk assessment of ground water contamination at the uranium mill tailings site near Salt Lake City, Utah. Revision 1, 20:29060 (R;US)
Baseline risk assessment of ground water contamination at the Uranium Mill Tailings Sites near Slick Rock, Colorado. Revision 1, 20:29061 (R;US)

Baseline risk assessment of ground water contamination at the uranium mill tailings site near Durango, Colorado. Revision 1, 20:29062 (R;US)
Baseline risk assessment of ground water contamination at the uranium mill tailings sites near Rifle, Colorado. Revision 1, 20:29063 (R;US)
Baseline risk assessment of ground water contamination at the Uranium Mill Tailings Site near Naturita, Colorado, 20:29065 (R;US)
Baseline risk assessment of ground water contamination at the Uranium Mill Tailings Site near Maybell, Colorado, 20:29070 (R;US)
Baseline risk assessment of ground water contamination at the uranium mill tailings site near Riverton, Wyoming. Revision 1, 20:29051 (R;US)
Comment and response document for the ground water protection strategy for the Uranium Mill Tailings Site at Green River, Utah, 20:29064 (R;US)
Comment and response document for the final remedial action plan site design for stabilization of the Inactive Uranium Mill Tailings Sites at Slick Rock, Colorado, 20:29067 (R;US)
Final audit report of remedial action construction at the UMTRA Project Ambrosia Lake, New Mexico, site, 20:29068 (R;US)
Guidance document for preparing water sampling and analysis plans for UMTRA Project sites. Revision 1, 20:29052 (R;US)
Public affairs plan, 20:29069 (R;US)
Remedial Action Plan and Site design for stabilization of the inactive Uranium Mill Tailings sites at Slick Rock, Colorado: Revision 1. Remedial action selection report, Attachment 2, geology report, Attachment 3, ground water hydrology report, Attachment 4, water resources protection strategy. Final, 20:29043 (R;US)
Supplement to the UMTRA Project water sampling and analysis plan, Riverton, Wyoming, 20:30628 (R;US)
Supplement to the UMTRA Project water sampling and analysis plan, Mexican Hat, Utah, 20:29056 (R;US)
Supplement to the UMTRA Project water sampling and analysis plan, Monument Valley, Arizona, 20:29058 (R;US)
Supplement to the UMTRA Project water sampling and analysis plan, Maybell, Colorado, 20:30629 (R;US)
Supplement to the UMTRA project water sampling and analysis plan, Slick Rock, Colorado, 20:30630 (R;US)
Supplement to the UMTRA Project water sampling and analysis plan, Ambrosia Lake, New Mexico, 20:29054 (R;US)
UMTRA project water sampling and analysis plan, Naturita, Colorado. Revision 1, 20:29057 (R;US)
UMTRA Project water sampling and analysis plan, Gunnison, Colorado. Revision 2, 20:30696 (R;US)
UMTRA Project water sampling and analysis plan, Grand Junction, Colorado. Revision 1, Version 6, 20:29059 (R;US)
UMTRA Project water sampling and analysis plan, Durango, Colorado. Revision 1, 20:29053 (R;US)
UMTRA Project water sampling and analysis plan, Canonsburg, Pennsylvania. Revision 1, 20:30627 (R;US)
UMTRA project water sampling and analysis plan, Falls City, Texas. Revision 1, 20:29055 (R;US)
Uranium Mill Tailings Remedial Action Project (UMTRAP), Slick Rock, Colorado, Revision 1. Bid schedule, special conditions, specifications, and subcontract drawings, 20:29044 (R;US)
Uranium Mill Tailings Remedial Action Project (UMTRAP), Slick Rock, Colorado, Revision 1. Volume 1, Calculations, Final design for construction, 20:29047 (R;US)
Uranium Mill Tailings Remedial Action Project (UMTRAP), Slick Rock, Colorado, Revision 1. Volume 2, Calculations, Final design for construction, 20:29048 (R;US)
Uranium Mill Tailings Remedial Action Project (UMTRAP), Slick Rock, Colorado, Revision 1, Volume 3. Calculations, Final design for construction, 20:29049 (R;US)
Uranium Mill Tailings Remedial Action Project (UMTRAP), Slick Rock, Colorado, Revision 1, Volume 4. Calculations, Final design for construction, 20:29050 (R;US)
Work plan for monitor well installation water and sediment sample collection aquifer testing and topographic surveying at the Riverton, Wyoming, UMTRA Project Site, 20:29066 (R;US)

Japan Atomic Energy Research Inst., Tokyo (Japan)
A few reactor physics experiments related to the HTGR safety at VHTRC, 20:29582 (RA;JP;In Japanese)
Basic experiments of reactor physics using the research reactor JRR-4 and NSRR, 20:29539 (R;JP;In Japanese)
Combline antennas for launching traveling fast waves, 20:31168 (RA;JP)
Concept of ceramics-free coaxial waveguide, 20:31169 (RA;JP)
Corrosion behavior of a simulated high-level radioactive waste glass under oxic and anoxic conditions, 20:28857 (R;JP;In Japanese)
Creep behaviour of hastelloy XR in simulated high-temperature gas-cooled reactor helium, 20:30034 (R;JP)
Design of a heat utilization system to be connected to the HTTR, 20:29538 (RA;JP;In Japanese)
Design of high temperature Engineering Test Reactor (HTTR), 20:29532 (R;JP)
Development of built-in mode converter type gyrotron with 120GHz, 500kW-0.1sec, 20:31178 (R;JP;In Japanese)
Development of ceramic-free antenna feeder, 20:31170 (RA;JP)
ECH (electron cyclotron heating) experiments on WT-3 by a focusing launcher, 20:31175 (RA;JP)
ECH (electron cyclotron heating) launching system for LHD (large helical device) and CHS (compact helical system), 20:31177 (RA;JP)
Effects of drying on desorption behavior of radionuclides adsorbed on a sand, 20:30714 (R;JP;In Japanese)
Fabrication and high heat flux test of divertor cooling elements, 20:31222 (R;JP)
Fabrication of He-He intermediate heat exchanger for HTTR, 20:29536 (RA;JP;In Japanese)
Fast wave current drive technology development at ORNL, 20:31165 (RA;JP)
Feasibility study of first wall electrical connector, 20:31221 (R;JP)
Fuel temperature prediction during high burnup HTGR fuel irradiation test. US-JAERI irradiation test for HTGR fuel, 20:29485 (R;JP;In Japanese)
Full-wave theory of a quasi-optical launching system for lower-hybrid waves, 20:31172 (RA;JP)
FWCD (fast wave current drive) and ECCD (electron cyclotron current drive) experiments on DIII-D, 20:31174 (RA;JP)
Geochemical studies for geologic disposal of high-level radioactive waste. Research activities in Department of Environmental Safety Research, Japan Atomic Energy Research Institute, 20:30715 (R;JP;In Japanese)
Helium turbine power generation in high temperature gas reactor, 20:29481 (RA;JP;In Japanese)
ICRF heating antennas for Alcator C-Mod, 20:31166 (RA;JP)
Innovative and basic researches for high temperature technologies at HTTR, 20:29480 (RA;JP;In Japanese)
Launching fast waves in large devices, 20:31163 (RA;JP)
Lower hybrid launcher on JET, 20:31173 (RA;JP)
Manufacture of HTTR components. 1. Containment vessel, pressurized water cooler and co-axial double pipe, 20:29534 (RA;JP;In Japanese)
Manufacturing of HTTR pressure vessel, 20:29537 (RA;JP;In Japanese)
Manufacturing status of the HTTR core internal structures, 20:29535 (RA;JP;In Japanese)
New conceptual antenna with spiral structure and back Faraday shield for FWCD (fast wave current drive), 20:31167 (RA;JP)
Performance of LHCD (Lower Hybrid current drive) launchers on JT-60U, 20:31171 (RA;JP)
Present status of HTTR construction and its testing program, 20:29533 (RA;JP;In Japanese)
Proceedings of the second symposium on joint spectroscopy experiments utilizing JAERI Tandem-booster accelerator, 20:31048 (R;JP;In Japanese, English)
Progress and safety aspects in process heat utilization from nuclear systems, 20:29483 (RA;JP)
R and D of hydrogen production by HTGRs, 20:29482 (RA;JP;In Japanese)
Recent results with 140 GHz ECRH at the W7-AS stellarator, 20:31176 (RA;JP)
Revised VESCAL: Vessel calibration data analysis program. Improvement of a model for non-linear parts of annular and slab tanks, 20:30289 (R;JP;In Japanese)

Severe accidents at nuclear power plants. Their risk assessment and accident management, 20:29458 (R;JP;In Japanese)
Sludge pasteurization and upgrading by radiation. Bilateral research cooperation between OAEP and JAERI, 20:29170 (R;JP)
Source term modeling and analysis for vault/trench facilities located in an unsaturated zone, 20:28858 (R;JP)
Study of air ingress accident of an HTGR, 20:29478 (RA;JP;In Japanese)
Technology development for LHD ICRF(ion cyclotron range frequencies) heating, 20:31164 (RA;JP)
The 1st workshop on utilization of high intensity proton accelerator, 20:30399 (R;JP;In Japanese, English)
The role of the IAEA in gas-cooled reactor development and application, 20:29479 (RA;JP)
Thermal analysis code for test of passive cooling system by helium engineering demonstration loop (HENDEL) in-core structure test section (T_2). THANPACST2, 20:29484 (R;JP;In Japanese)

Japan Society of Multiphase Flow, Kyoto (Japan)

3-D flow analyses for design of nuclear fuel spacer, 20:29476 (RA;US)
A comparison of critical heat flux in tubes and bilaterally heated annuli, 20:29506 (RA;US)
A comparison of the CHF between tubes and annuli under PWR thermal-hydraulic conditions, 20:29473 (RA;US)
A comparison of the effect of the first and second upwind schemes on the predictions of the modified RELAP5/MOD3, 20:29726 (RA;US)
A concept of JAERI passive safety light water reactor system (JPSR), 20:29675 (RA;US)
A criterion for the onset of slugging in horizontal stratified air-water countercurrent flow, 20:29613 (RA;US)
A formal approach for the prediction of the critical heat flux in subcooled water, 20:31233 (RA;US)
A general unified non-equilibrium model for predicting saturated and subcooled critical two-phase flow rates through short and long tubes, 20:29621 (RA;US)
A mechanistic determination of horizontal flow regime bound using void wave celerity, 20:29612 (RA;US)
A model for the performance of a vertical tube condenser in the presence of noncondensable gases, 20:29628 (RA;US)
A model of film boiling in the presence of electric fields, 20:29514 (RA;US)
A practical view of the insights from scaling thermal-hydraulic tests, 20:29681 (RA;US)
A simple delay model for two-phase flow dynamics, 20:29515 (RA;US)
A simple modelling of mass diffusion effects on condensation with noncondensable gases for the CATHARE Code, 20:29738 (RA;US)
A study of the dispersed flow interfacial heat transfer model of RELAP5/MOD2.5 and RELAP5/MOD3, 20:29730 (RA;US)
A study of the effect of space-dependent neutronics on stochastically-induced bifurcations in BWR dynamics, 20:29753 (RA;US)
A thermal-hydraulic code for transient analysis in a channel with a rod bundle, 20:29673 (RA;US)
About the statistical description of gas-liquid flows, 20:29619 (RA;US)
Aerodynamics, heat and mass transfer in steam-aerosol turbulent flows in containment, 20:29699 (RA;US)
An assessment of RELAP5 MOD3.1.1 condensation heat transfer modeling with GIRAFFE heat transfer tests, 20:29736 (RA;US)
An experimental investigation of the post-CHF enhancement factor for a prototypical ITER divertor plate with water coolant, 20:31231 (RA;US)
An interpretation of passive containment cooling phenomena, 20:29694 (RA;US)
An investigation of condensation from steam-gas mixtures flowing downward inside a vertical tube, 20:29624 (RA;US)
An investigation of transition boiling mechanisms of subcooled water under forced convective conditions, 20:29472 (RA;US)
Analysis of a small break loss-of-coolant accident of pressurized water reactor by APROS, 20:29740 (RA;US)
Analysis of an AP600 intermediate-size loss-of-coolant accident, 20:29674 (RA;US)
Analysis of overflow-induced sloshing in an elestic-wall vessel using physical component BFC method, 20:29682 (RA;US)
Analysis of steam generator loss-of-feedwater experiments with APROS and RELAP5/MOD3.1 computer codes, 20:29758 (RA;US)
Analysis of supercritical vapor explosions using thermal detonation wave theory, 20:29703 (RA;US)
Analysis of the return to power scenario following a LBLOCA in a PWR, 20:29754 (RA;US)
Analysis of two-phase flow inter-subchannel mass and momentum exchanges by the two-fluid model approach, 20:29462 (RA;US)
Analytical solution of laminar-laminar stratified two-phase flows with curved interfaces, 20:29617 (RA;US)
AP600 design certification thermal hydraulics testing and analysis, 20:29611 (RA;US)
Application of an analytical method for solution of thermal hydraulic conservation equations, 20:29723 (RA;US)
Application of UPTF data for modeling liquid draindown in the downcomer region of a PWR using RELAP5/MOD2-B&W, 20:29667 (RA;US)
Assessment of computer codes for VVER-440/213-type nuclear power plants, 20:29731 (RA;US)
Assessment of the advantages of a residual heat removal system inside the reactor pressure vessel, 20:29676 (RA;US)
ASTRID: A 3D Eulerian software for subcooled boiling modelling - comparison with experimental results in tubes and annuli, 20:29647 (RA;US)
ATHLET validation using accident management experiments, 20:29737 (RA;US)
Boiling characteristics of dilute polymer solutions and implications for the suppression of vapor explosions, 20:29706 (RA;US)
Bubble behaviour and mean diameter in subcooled flow boiling, 20:30342 (RA;US)
Buoyancy-driven flow excursions in fuel assemblies, 20:29636 (RA;US)
CATHARE2 calculation of SPE-3 test small break loca on PMK facility, 20:29733 (RA;US)
CCFL in hot legs and steam generators and its prediction with the CATHARE code, 20:29652 (RA;US)
CFD prediction of flow and phase distribution in fuel assemblies with spacers, 20:29643 (RA;US)
Characteristics of turbulent velocity and temperature in a wall channel of a heated rod bundle, 20:29640 (RA;US)
Characterization of non equilibrium effects on high quality critical flows, 20:29504 (RA;US)
CHF considerations for highly moderated 100% MOX fuels PWRs, 20:29474 (RA;US)
Code package "SVECHA": Modeling of core degradation phenomena at severe accidents, 20:29720 (RA;US)
Cold source vessel development for the advanced neutron source, 20:29571 (RA;US)
Computational fluid dynamic analysis of a closure head penetration in a pressurized water reactor, 20:29644 (RA;US)
Computational modeling for hexcan failure under core distruptive accidental conditions, 20:29689 (RA;US)
Condensation during gravity driven ECC: Experiments with PACTEL, 20:29623 (RA;US)
Condensation heat transfer coefficient with noncondensible gases for heat transfer in thermal hydraulic codes, 20:29630 (RA;US)
Condensation in the presence of noncondensible gases: AP600 containment simulation, 20:29697 (RA;US)
Conjugate heat transfer analysis of multiple enclosures in prototype fast breeder reactor, 20:29688 (RA;US)
Containment atmosphere response to external sprays, 20:29691 (RA;US)
Correlation of critical heat flux data for uniform tubes, 20:29513 (RA;US)
Correlations between the disintegration of melt and the measured impulses in steam explosions, 20:29702 (RA;US)
Counter-current flow in a vertical to horizontal tube with obstructions, 20:29650 (RA;US)

Coupled calculation of the radiological release and the thermal-hydraulic behavior of a 3-loop PWR after a SGTR by means of the code RELAP5, 20:29755 (RA;US)
Cross-sectional void fraction distribution measurements in a vertical annulus two-phase flow by high speed X-ray computed tomography and real-time neutron radiography techniques, 20:29638 (RA;US)
Crust formation and its effect on the molten pool coolability, 20:29717 (RA;US)
Density wave oscillations of a boiling natural circulation loop induced by flashing, 20:29660 (RA;US)
Detailed thermal-hydraulic computation into a containment building, 20:29695 (RA;US)
Development and assessment of a modified version of RELAP5/MOD3, 20:29729 (RA;US)
Development of a graphical user interface for the TRAC plant/safety analysis code, 20:29725 (RA;US)
Development, implementation and assessment of specific, two-fluid closure laws for inverted-annular film-boiling, 20:29616 (RA;US)
Drift flux model as approximation of two fluid model for two phase dispersed and slug flow in tube, 20:29615 (RA;US)
Dynamics of shock wave propagation and interphase process in liquid-vapor medium, 20:29665 (RA;US)
Effect of subcooling and wall thickness on pool boiling from downward-facing curved surfaces in water, 20:29626 (RA;US)
Entropy analysis on non-equilibrium two-phase flow models, 20:29620 (RA;US)
Evaluation and assessment of reflooding models in RELAP5/Mod2.5 and RELAP5/Mod3 codes using Lehigh University and PSI-Neptun bundle experimental data, 20:29741 (RA;US)
Evaluation of a main steam line break with induced, multiple tube ruptures: A comparison of NUREG 1477 (Draft) and transient methodologies Palo Verde Nuclear Generating Station, 20:29666 (RA;US)
Evaluation of wrapper tube temperatures of fast neutron reactors using the TRANSCOEUR-2 code, 20:29686 (RA;US)
Experience using individually supplied heater rods in critical power testing of advanced BWR fuel, 20:29460 (RA;US)
Experimental assessment of computer codes used for safety analysis of integral reactors, 20:29746 (RA;US)
Experimental investigation of 150-KG-scale corium melt jet quenching in water, 20:29707 (RA;US)
Experimental simulation of the water cooling of corium spread over the floor of a BWR containment, 20:29721 (RA;US)
Experimental studies of thermal and chemical interactions between oxide and silicide nuclear fuels with water, 20:29709 (RA;US)
Experimental studies of thermal and chemical interactions between molten aluminum and water, 20:29712 (RA;US)
Experimental study of horizontal annular channels under non-developed conditions, 20:29631 (RA;US)
FARO base case post-test analysis by COMETA code, 20:29735 (RA;US)
FCI experiments in the corium/water system, 20:29708 (RA;US)
FIBWR2 evaluation of fuel thermal limits during density wave oscillaions in BWRs, 20:29659 (RA;US)
Flooding characteristics of gas-liquid two-phase flow in a horizontal U bend pipe, 20:29651 (RA;US)
Flooding of a large, passive, pressure-tube LWR, 20:29678 (RA;US)
Flow characteristics of Korea multi-purpose research reactor, 20:29569 (RA;US)
Free convective condensation in a vertical enclosure, 20:29696 (RA;US)
Further evaluation of the CSNI separate effect test activity, 20:29764 (RA;US)
General correlation for prediction of critical heat flux ratio in water cooled channels, 20:29507 (RA;US)
GEYSER/TONUS: A coupled multi-D lumped parameter code for reactor thermal hydraulics analysis in case of severe accidents, 20:29700 (RA;US)
Geysering in boiling channels, 20:29657 (RA;US)
Horizontal steam generator thermal-hydraulics, 20:29475 (RA;US)
Hydrogen behavior in ice condenser containments, 20:29698 (RA;US)
INJECT and the modeling of waste recycling processes, 20:28904 (RA;US)
Interaction between the radiative flux emitted by a corium melt and aerosols from corium/concrete interaction, 20:29713 (RA;US)
Interfacial shear stress in stratified flow in a horizontal rectangular duct, 20:29632 (RA;US)
Investigations on sump cooling after core melt down, 20:29690 (RA;US)
Investigations on the thermal-hydraulics of a natural circulation cooled BWR fuel assembly, 20:29464 (RA;US)
ISP33 standard problem on the PACTEL facility, 20:29759 (RA;US)
Large eddy simulation of mixing between hot and cold sodium flows - comparison with experiments, 20:29684 (RA;US)
Large-scale transport across narrow gaps in rod bundles, 20:29508 (RA;US)
Level tracking in detailed reactor simulations, 20:29727 (RA;US)
Local mesh refinement for incompressible fluid flow with free surfaces, 20:30341 (RA;US)
Local pressure gradients due to incipience of boiling in subcooled flows, 20:29614 (RA;US)
Measurement of the interaction between the flow and the free surface of a liquid, 20:29634 (RA;US)
Melcor benchmarking against integral severe fuel damage tests, 20:29744 (RA;US)
Methodology for the study of the boiling crisis in a nuclear fuel bundle, 20:29471 (RA;US)
Modeling and analysis framework for core damage propagation during flow-blockage-initiated accidents in the advanced neutron source reactor at Oak Ridge National Laboratory, 20:29769 (RA;US)
Modeling and analysis of thermal-hydraulic response of uranium-aluminum reactor fuel plates under transient heatup conditions, 20:29765 (RA;US)
Modeling and numerical simulation of oscillatory two-phase flows, with application to boiling water nuclear reactors, 20:29663 (RA;US)
Modeling of heat and mass transfer processes during core melt discharge from a reactor pressure vessel, 20:29714 (RA;US)
Modeling of local steam condensation on walls in presence of non-condensable gases. Application to a loca calculation in reactor containment using the multidimensional geyser/tonus code, 20:29692 (RA;US)
Natural circulation analysis for the advanced neutron source reactor refueling process 11, 20:29570 (RA;US)
Natural circulation in a VVER reactor geometry: Experiments with the PACTEL facility and Cathare simulations, 20:29655 (RA;US)
Natural convection heat transfer on two horizontal cylinders in liquid sodium, 20:29685 (RA;US)
New model for burnout prediction in channels of various cross-section, 20:29751 (RA;US)
NRC review of passive reactor design certification testing programs: Overview, progress, and regulatory perspective, 20:29677 (RA;US)
Numerical Boron mixing studies for Loviisa Nuclear Power Plant, 20:29770 (RA;US)
Numerical determination of lateral loss coefficients for subchannel analysis in nuclear fuel bundles, 20:29757 (RA;US)
Numerical investigation of heat transfer in high-temperature gas-cooled reactors, 20:29724 (RA;US)
Numerical modeling of condensation from vapor-gas mixtures for forced down flow inside a tube, 20:29627 (RA;US)
Numerical simulation of multi-dimensional two-phase flow based on flux vector splitting, 20:29642 (RA;US)
Numerical simulation of stratified shear flow using a higher order Taylor series expansion method, 20:29722 (RA;US)
On heat transfer characteristics of real and simulant melt pool experiments, 20:29653 (RA;US)
On the constitutive description of the microinteractions concept in steam explosions, 20:29701 (RA;US)
On the look-up tables for the critical heat flux in tubes (history and problems), 20:29752 (RA;US)
Overview of CSNI separate effects tests validation matrix, 20:29742 (RA;US)

Oxidation during reflood of reactor core with melting cladding, 20:29716 (RA;US)
Parametric numerical investigaion of natural convection in a heat-generating fluid with phase transitions, 20:29656 (RA;US)
Passive decay heat removal by natural air convection after severe accidents, 20:29654 (RA;US)
Physical modelling of a rapid boron dilution transient, 20:29763 (RA;US)
Plant data comparisons for Comanche Peak 1/2 main feedwater pump trip transient, 20:29668 (RA;US)
Predictions of bubbly flows in vertical pipes using two-fluid models in CFDS-FLOW3D code, 20:29622 (RA;US)
Problems in experimental and mathematical investigations of the accidental thermohydraulic processes in RBMK nuclear reactors, 20:29662 (RA;US)
Prospects for bubble fusion, 20:31189 (RA;US)
PWR-related integral safety experiments in the PKL 111 test facility SBLOCA under beyond-design-basis accident conditions, 20:29761 (RA;US)
Quantitative code accuracy evaluation of ISP33, 20:29734 (RA;US)
Quenching phenomena in natural circulation loop, 20:29633 (RA;US)
Rapid depressurization event analysis in BWR/6 using RELAP5 and contain, 20:29672 (RA;US)
Rayleigh-Taylor instability of cylindrical jets with radial motion, 20:31232 (RA;US)
RBMK-LOCA-Analyses with the ATHLET-Code, 20:29669 (RA;US)
Reflooding and boil-off experiments in a VVER-440 like rod bundle and analyses with the CATHARE code, 20:29649 (RA;US)
RELAP5 analyses of two hypothetical flow reversal events for the advanced neutron source reactor, 20:29743 (RA;US)
RELAP5 model to simulate the thermal-hydraulic effects of grid spacers and cladding rupture during reflood, 20:29747 (RA;US)
Resolution of thermal-hydraulic safety and licensing issues for the system 80+™ design, 20:29610 (RA;US)
Results of international standard problem No. 36 severe fuel damage experiment of a VVER fuel bundle, 20:29715 (RA;US)
SBWR PCCS vent phenomena and suppression pool mixing, 20:29679 (RA;US)
Scaling for integral simulation of thermal-hydraulic phenomena in SBWR during LOCA, 20:29680 (RA;US)
Severe accident simulation at Olkiuoto, 20:29749 (RA;US)
Simulation of a beyond design-basis-accident with RELAP5/MOD3.1, 20:29671 (RA;US)
Simulation of decay heat removal by natural convection in a pool type fast reactor model-ramona-with coupled 1D/2D thermal hydraulic code system, 20:29687 (RA;US)
Simulation of the thermalhydraulic behavior of a molten core within a structure, with the three dimensions three components TOLBIAC code, 20:29718 (RA;US)
Small-break loss-of-coolant accidents in the updated PIUS 600 advanced reactor design, 20:29670 (RA;US)
Some thermohydraulics of closure head adapters in a 3 loops PWR, 20:29739 (RA;US)
SPES-2, an experimental program to support the AP600 development, 20:29760 (RA;US)
SPES-2, AP600 intergral system test S01007 2 inch CL to core make-up tank pressure balance line break, 20:29762 (RA;US)
Stability analysis of BWR nuclear-coupled thermal-hyraulics using a simple model, 20:29461 (RA;US)
Statistical parameter characteristics of gas-phase fluctuations for gas-liquid intermittent flow, 20:29512 (RA;US)
Study of condensation heat transfer following a main steam line break inside containment, 20:29625 (RA;US)
Study on mixed convective flow penetration into subassembly from reactor hot plenum in FBRs, 20:29683 (RA;US)
Study on severe accident fuel dispersion behavior in the advanced neutron source reactor at Oak Ridge National Laboratory, 20:29766 (RA;US)
The analysis of SCS return momentum effects on the RCS water level during mid-loop operations, 20:29750 (RA;US)

RAT: A computational tool for retrieval of atmospheric trace gas profiles from infrared spectra, 20:30659 (R;DE)
The airborne remote sensing experiment MIPAS-FT: data analysis and interpretation of the artic campaigns 1991/92 and 1992/93, 20:30557 (R;DE;In German)

Kerr-McGee Corp., Oklahoma City, OK (United States)
Bench-scale testing of the multi-gravity separator in combination with microcel. Final report, 20:28583 (R;US)

Kiel Univ. (Germany). Mathematisch-Naturwissenschaftliche Fakultaet
Large scale circulation and meridional transports in the South Pacific, 20:30650 (R;DE;In German)

Korea Atomic Energy Research Inst., Taejon (Korea, Republic of)
A Study on the Establishment of Technical Standards of Radioactive Wastes, 20:29495 (R;KR;In Korean)
Long-term integrity study on storage facility of spent fuel/Improvement of cooling water purification technology in a spent fuel storage pool, 20:30235 (R;KR;In Korean)

Korea Electric Power Corp. (KEPCO), Taejon (Korea, Republic of). Research Center
A Development of 40kW Phosphoric Acid Fuel Cell System, 20:29890 (R;KR;In Korean)
A Planning Study for Integrated Database System of Nuclear Power Plant, 20:31401 (R;KR;In Korean)
A Research and Development on Cold Storage Air Conditioning System, 20:29807 (R;KR;In Korean)
A Study for development and Application of Hangulization in SCADA System, 20:31291 (R;KR;In Korean)
A Study for the stress Analysis of High Temperature Pipe System and the application of BoLPAS Program to Power Plant, 20:29435 (R;KR;In Korean)
A Study of the Establishment of Algorithm and the Standardization for Distribution Automation, 20:29785 (R;KR;In Korean)
A Study on Management Techniques of Power Telecommunication System by Reliability Analysis, 20:31290 (R;KR;In Korean)
A Study on the Asynchronous Interconnection Technology Between IBM Host and OA Equipment, 20:31292 (R;KR;In Korean)
A Study on the Automatic Transfer System of Auxiliary Power Supply for KORI Unit no.2, 20:29526 (R;KR;In Korean)
A Study on The Corrosion Products Behavior in N/P and Establishment of Control Methods, 20:29467 (R;KR;In Korean)
A Study on the Crack Growth Analysis of Thick Section Components Exposed at High Temperature in Power Plants, 20:30291 (R;KR;In Korean)
A Study on the Design of the Integrated Systems for Power System Operational Planning and Analysis, 20:29781 (R;KR;In Korean)
A Study on the Development and Application of Monitoring System for Power Transmission Facilities by using the Optical Sensors, 20:30541 (R;KR;In Korean)
A Study on the Development of Building Energy Analysis Program and the Establishment of BEPS, 20:29907 (R;KR;In Korean)
A Study on The High Pure Water Production using RO, 20:30773 (R;KR;In Korean)
A Study on the Operational Methods and Design of Earthquake Monitoring System for Kori Nuclear Unit 1, 20:30292 (R;KR;In Korean)
A Study on the Precise Diagnosis and Life Assessment for Aging Equipment of Thermal Power Plant, 20:30293 (R;KR;In Korean)
A Study on the Protective of Underground Transmission Cable from Electrical Surges, 20:29790 (R;KR;In Korean)
A Study on the Protective Relaying Schemes for 765kV Power System, 20:29786 (R;KR;In Korean)
A Study on the Reduction Method and the Analysis of VCB Switching Surge for High Voltage Induction Motors, 20:29433 (R;KR;In Korean)
A Study on the Thermal Rating of Underground Distribution Cable by Dynamic Modelling, 20:29789 (R;KR;In Korean)
A study on the up-grade of optic instrument and control system in power plant, 20:30544 (R;KR;In Korean)
A Technology Study of Wireless LAN for Power Utility Application, 20:31294 (R;KR;In Korean)
An Experimental study on the Coal Gasifier and Purification system for IGCC Plant, 20:28629 (R;KR;In Korean)
An Improvement of the Numerical Analysis Program and Experimental Study for the Foundation of Rotating machine, 20:31337 (R;KR;In Korean)
Applications Study for PV Generation of Remote Islands, 20:29393 (R;KR;In Korean)
Circulating Fluidized Bed Combustion of Korean Anthracite, 20:29436 (R;KR;In Korean)
Development and Application of Optical CT, PT, 20:30542 (R;KR;In Korean)
Development and Application of the MMI System Using Speech Synthesis, 20:31400 (R;KR;In Korean)
Development of 3-D Simulation Program for Pulverized Coal Combustor, 20:28644 (R;KR;In Korean)
Development of a 20KVA Superconducting Alternator, 20:31150 (R;KR;In Korean)
Development of Acoustic Emission Monitoring Techniques of Bearings in Rotating Machinery High-Temperature Facilities, 20:30290 (R;KR;In Korean)

Development of Condition Monitoring Techniques of Degradation of the High-Temperature Facilities, 20:29432 (R;KR;In Korean)
Development of Optimal Boiler Controllers Based on Boiler Parameter Identification(I), 20:29426 (R;KR;In Korean)
Development of PWR Secondary Water Chemistry Monitoring and Diagnostic System for Nuclear Power Plants, 20:29525 (R;KR;In Korean)
Development of Skin Dose Evaluation Technology, 20:30826 (R;KR;In Korean)
Development of Techniques for Reducing PWR Primary Coolant System Dose Rate, 20:29496 (R;KR;In Korean)
Development of the Advanced Turbine Supervisory Instrument of Power Plants, 20:29427 (R;KR;In Korean)
Erosion and Heat Transfer Characteristics of a Finned Horizontal Tube in a FBC, 20:30338 (R;KR;In Korean)
Investigation of Flame Structures Temperature and Heat Flux Measurements, 20:28675 (R;KR;In Korean)
Investigation on the damage of the electric facilities by air pollutants, 20:30167 (R;KR;In Korean)
Optimization of Burnable Poison Application Strategy, 20:29519 (R;KR;In Korean)
Power Line Carrier Relay System : Analysis and Correction of the Trip Blocking Malfunction, 20:29779 (R;KR;In Korean)
Qualification Test for Chemical Cleaning of KORI Unit Two System Generators, 20:29468 (R;KR;In Korean)
Research on Master Plan of Power System Simulator Installation, 20:29780 (R;KR;In Korean)
Research on the fault section detecting system for underground transmission lines using optical technologies, 20:30543 (R;KR;In Korean)
Research on the performance Characteristics of Electronic Communication Equipment to Radiated Electromagnetic Field Disturbance, 20:31289 (R;KR;In Korean)
Study on the Utilization of Fly Ash as a Soil Amendment, 20:29445 (R;KR;In Korean)
The Development and Application of Digital Distributed Control System for Boiler in the Power Plant, 20:30355 (R;KR;In Korean)
The Development of a Pulse Code Modulation(PCM) Bandwidth Compression System, 20:31399 (R;KR;In Korean)
The Study on Standardization of LAN System for KEPCO, 20:31293 (R;KR;In Korean)
The Study on the Microscale Meteorological Changes Caused by Reservoir Construction for H/P Generation, 20:30660 (R;KR;In Korean)
Wear and erosion prevention of rotating components in coal fired power plant using plasma spray method, 20:29434 (R;KR;In Korean)

Korea Gas Corp., Ansan (Korea, Republic of)
A Preliminary Study for Natural Gas Database System at the R and D Center of Korea Gas Corp, 20:28750 (R;KR;In Korean)
A Study on the Improvement of Chlorination System, 20:28745 (R;KR;In Korean)
A Study on the Odorant Mixtures and their Physical Properties, 20:28744 (R;KR;In Korean)
A Study on the Representative LNG Sampling for Property Measurement, 20:28756 (R;KR;In Korean)
Analysis of Rollover phenomena and testing research of boil-off on the surface of LNG, 20:28757 (R;KR;In Korean)
Corrosion Protection of Sea-Water Pipeline by the Application of Polymer Coating, 20:28752 (R;KR;In Korean)
Development of Compressed Natural Gas Fuel Cylinder for Vehicle, 20:28759 (R;KR;In Korean)
Evaluation of cryogenic properties and applicability of 9% nickel steel to large scale liquefied natural gas storage tanks, 20:28753 (R;KR;In Korean)
Research for developing the program(II) of Estimating LNG/NG physical properties, 20:28758 (R;KR;In Korean)
Study on optimum repair welding procedure of high pressure open rack vaporizer, 20:28755 (R;KR;In Korean)
World natural gas trends and gas projects, 20:28749 (R;KR;In Korean)

Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst.
KURRI progress report 1993. April 1993 - March 1994, 20:31304 (I;JP)

L

Lawrence Berkeley Lab., CA (United States)
1994 Site Environmental Report, 20:28890 (R;US)
A field test of permeation grouting in heterogeneous soils using a new generation of barrier liquids, 20:30738 (R;US)
A graphical interface to the TOUGH family of flow simulators, 20:31356 (RA;US)
A new lumped-parameter approach to simulating flow processes in unsaturated dual-porosity media, 20:30734 (RA;US)
A photo spectrometer PHOS for the ALICE experiment at the LHC, 20:30993 (RA;US)
Accelerator operation management using objects, 20:30465 (R;US)
Activation of shallow dopants in II-VI compounds, 20:30173 (R;US)
Advanced light source, User's Handbook, Revision 1, 20:29852 (R;US)
Air sparging for subsurface remediation: Numerical analysis using T2VOC, 20:30730 (RA;US)
Air-tough: A fully 3-dimensional linking of atmosphere with soil using eddy diffusivity concept and V-TOUGH, 20:30663 (RA;US)
Alignment and magnet error tolerances for the LCLS x-ray FEL, 20:30384 (R;US)
An orthotropic source of thermal atoms, 20:30871 (R;US)
Analysis and design modifications for upgrade of storage ring bump pulse system driving the injection bump magnets at the ALS, 20:30467 (R;US)
Analysis of nuclide transport under natural convection and time dependent boundary condition using TOUGH2, 20:28893 (RA;US)
Analysis of over-pressure mechanisms in the Uinta Basin, Utah, 20:28684 (RA;US)
Analysis of single events in ultrarelativistic nuclear collisions: A new method to search for critical fluctuations, 20:31085 (RA;US)
Angle-resolved photoemission extended fine structure: Multiple layers of emitters and multiple initial states, 20:30056 (R;US)
Application of TOUGH to hydrologic problems related to the unsaturated zone site investigation at Yucca Mountain, Nevada, 20:28899 (RA;US)
Applications of flavor symmetry to the phenomenology of elementary particles, 20:30956 (R;US)
Atomic scale interface structure of $In_{0.2}Ga_{0.8}As/GaAs$ strained layers studied by cross-sectional scanning tunneling microscopy, 20:30170 (R;US)
Automated beam based alignment of the ALS quadrupoles, 20:30493 (R;US)
Automatic history matching of geothermal field performance, 20:29412 (R;US)
Beam dynamics in heavy ion fusion, 20:31227 (R;US)
Beam dynamics studies of the Heavy Ion Fusion Accelerator injector, 20:31229 (R;US)
Beam lifetime and beam brightness in ALS, 20:30427 (R;US)
Bis(pentamethylcyclopentadienyl)ytterbium: An investigation of weak interactions in solution using multinuclear NMR spectroscopy, 20:30239 (R;US)
Cautionary aphorisms for customer-oriented system development, 20:31353 (R;US)
Center for Beam Physics: 1994–95, 20:30400 (R;US)
Compton scattering in the ALS booster, 20:30366 (R;US)
Concept for a third generation ECR source at LBL, 20:30471 (R;US)
Concepts of event-by-event analysis, 20:31086 (RA;US)
Coupling of the reservoir simulator TOUGH and the wellbore simulator WFSA, 20:29420 (RA;US)
Crossed molecular beams study of $O(^1D)$ reactions with H_2 molecules, 20:31108 (R;US)
Current trends in non-accelerator particle physics: 1, Neutrino mass and oscillation. 2, High energy neutrino astrophysics. 3, Detection of dark matter. 4, Search for strange quark matter. 5, Magnetic monopole searches, 20:31030 (R;US)
Defect studies with isotopically designed semiconductors, 20:30238 (R;US)
Design of end magnetic structures for the Advanced Light Source wigglers, 20:30430 (R;US)
Developing energy and environmental reporting protocols, 20:29843 (R;US)

Development of a model to simulate the performance of hydronic radiant cooling ceilings, 20:29910 (R;US)
Diomres (k,m): An efficient method based on Krylov subspaces to solve big, dispersed, unsymmetrical linear systems, 20:31361 (RA;US)
Drift-scale thermo-hydrologic analyses for the proposed repository at Yucca Mountain, NV, 20:28895 (RA;US)
Efficiency and stray light measurements and calculations of diffraction gratings for the ALS, 20:30463 (R;US)
Electron cyclotron heating and current drive: Present experiments to ITER. Revision 1, 20:31161 (R;US)
Electron measurement in PHENIX, 20:31018 (RA;US)
Energy efficiency improvements for refrigerator/freezers using prototype doors containing gas-filled panel insulating systems, 20:29911 (R;US)
Energy Science and Technology Software Center, 20:31359 (RA;US)
Energy spread of ion beams generated in multicusp ion sources, 20:30365 (R;US)
Estimation of hydraulic conductivities of Yucca Mountain tuffs from sorptivity and water retention measurements, 20:28900 (R;US)
Estimation of linear functionals in emission tomography, 20:30299 (R;US)
Evaluation of public service Electric & Gas Company's standard offer program: Volume II: Appendices, 20:29877 (R;US)
EVEGAS Project (European validation exercise of GAS migration model), 20:30736 (RA;US)
Excited state carrier dynamics in CdS_xSe_{1-x} semiconductor alloys as studied by ultrafast fluorescence spectroscopy, 20:31102 (R;US)
Experiences using multigrid for geothermal simulation, 20:31360 (RA;US)
Feasibility of synthesizing oxide films on ceramic and metal substrates. Final report, August 1994–May 1995, 20:30121 (R;US)
Femto-second pulses of synchrotron radiation, 20:29173 (R;US)
First results from experiment NA49 at the CERN SPS with 158 GeV/nucleon Pb on Pb collisions, 20:31082 (R;US)
Flow and transport simulations using T2CG1, a package of conjugate gradient solvers for the TOUGH2 family of codes, 20:28891 (R;US)
Flow reduction due to degassing and redissolution phenomena, 20:28898 (RA;US)
FOAM3D: A numerical simulator for mechanistic prediciton of foam displacement in multidimensions, 20:28702 (RA;US)
Formation of metal oxides by cathodic arc deposition, 20:30118 (R;US)
Graphical user interface for TOUGH/TOUGH2 - development of database, pre-processor, and post-processor, 20:31358 (RA;US)
Hadron distributions at higher rapidity using the BRAHMS forward spectrometer, 20:30526 (RA;US)
Hard scattering of partons as a probe of collisions at RHIC using the STAR detector system, 20:30529 (RA;US)
HBT measurements in PHENIX, STAR and ALICE, 20:31088 (RA;US)
Heavy ion driven LMF design concept. Revised, 20:30605 (R;US)
Heavy ion fusion 2 MV injector, 20:31228 (R;US)
Heavy ion physics at LHC with the Compact Muon Solenoid, 20:30532 (RA;US)
High pressure studies on nanometer sized clusters: Structural, optical, and cooperative properties, 20:30174 (R;US)
High resolution soft x-ray bending magnet beamline 9.3.2 with circularly polarized radiation capability at the Advanced Light Source, 20:30472 (R;US)
Hysteresis and saturation effects with the ALS lattice magnets, 20:30466 (R;US)
Implementation of a new algorithm for Density Equalizing Map Projections (DEMP), 20:30723 (R;US)
In-situ deposition of sacrificial layers during ion implantation, 20:30055 (R;US)
Injectable barriers for waste isolation, 20:29098 (R;US)
Instrumentation in medical systems, 20:30804 (R;US)
International DSM and DSM program evaluation: An INDEEP assessment, 20:29956 (R;US)
Inverse modeling as a step in the calibration of the LBL-USGS site-scale model of Yucca Mountain, 20:28892 (R;US)
Investigation of potential water inflow into a ventilated tunnel of the proposed low/intermediate-level waste repository in Switzerland, 20:28894 (RA;US)
Is there a role for fixed target heavy ion physics beyond RHIC startup?, 20:31090 (RA;US)
ITOUGH2: Solving TOUGH inverse problems, 20:30735 (RA;US)
Laboratory study of a low NO_x hot water heater with a weak-swirl burner, 20:29913 (R;US)
LNAPL infiltration in the vadose zone: Comparisons of physical and numerical simulations, 20:30725 (RA;US)
Magnetic design of the advanced light source elliptical wiggler, 20:30468 (R;US)
Magnetic design of trim excitations for the advanced light source storage ring sextupole, 20:30469 (R;US)
Measurements of strangeness production in the STAR experiment at RHIC, 20:31084 (RA;US)
Measurements of the W and Z inclusive cross sections and determination of the W decay width, 20:31011 (R;US)
Measuring two-particle Bose-Einstein correlations with PHOBOS@RHIC, 20:31087 (RA;US)
Methods of constructing a 3D geological model from scatter data, 20:31355 (R;US)
Midrapidity measurements with the BRAHMS spectrometer, 20:30525 (RA;US)
Modeling acid mine drainage in waste rock dumps, 20:28660 (RA;US)
Modeling of hydrothermal circulation applied to active volcanic areas. The case of Vulcano (Italy), 20:29408 (RA;US)
Modeling the response of the geothermal system at Lihir Island, Papua New Guinea to mine dewatering, 20:29411 (RA;US)
Multicusp sources for ion beam lithography applications, 20:29172 (R;US)
New perspectives on the cancer risks of trichloroethylene, its metabolites, and chlorination by-products, 20:30841 (R;US)
Nonlinear dynamics of additive pulse modelocked lasers, 20:30367 (R;US)
Numerical simulation of carbon dioxide effects in geothermal reservoirs, 20:29410 (RA;US)
Numerical simulation of in-situ DNAPL remediation by alcohol flooding, 20:30728 (RA;US)
Numerical simulations of multicomponent evaporation and gas-phase transport using M^2NOTS, 20:30732 (RA;US)
On the quantum mechanical theory of collisional recombination rates, II. Beyond the strong collision approximation, 20:31109 (R;US)
Orbit control at the ALS based on sensitivity matrices, 20:30428 (R;US)
P-type silicon drift detectors, 20:30518 (R;US)
P-type silicon drift detectors: First results, 20:30519 (R;US)
Parametric analysis of a TOUGH2 model for the unsaturated zone at Yucca Mountain, 20:29030 (RA;US)
Particle identification using time-of-flight technology for the ALICE experiment, 20:30534 (RA;US)
Pauli-Villars regulatization of supergravity and field theory anomalies, 20:30990 (R;US)
PHOBOS physics capabilities, 20:30527 (RA;US)
Photoelectron holography applied to surface structural determination, 20:30205 (R;US)
Photofragment translational spectroscopy of three body dissociations and free radicals, 20:30250 (R;US)
Photon physics with PHENIX, 20:30531 (RA;US)
Plasma synthesis of alumina films on metal and ceramic substrates, 20:30119 (R;US)
Plasma synthesis of rare earth doped integrated optical waveguides, 20:30368 (R;US)
Predicting the distribution of contamination from a chlorinated hydrocarbon release, 20:30724 (RA;US)
Preliminary analysis of tank 241-C-106 dryout due to large postulated leak and vaporization, 20:28896 (RA;US)
Preliminary development of the LBL/USGS three-dimensional site-scale model of Yucca Mountain, Nevada, 20:30850 (R;US)

Proboscis container shapes for the USML-2 interface configuration experiment, 20:30300 (R;US)
Prognostic simulation of reinjection-research project geothermal site Neustadt-Glewe/Germany, 20:29407 (RA;US)
Progress in collective flow studies from the onset to Bevalac/SIS, 20:31083 (R;US)
Progress toward a prototype recirculating induction accelerator for heavy-ion fusion, 20:31251 (R;US)
Quasi-isochronous storage ring for enhanced FEL performance, 20:30495 (R;US)
Reduction of nonlinear resonance excitation from insertion devices in the ALS, 20:30426 (R;US)
Requirements on sealing measures due to gas production, 20:28897 (RA;US)
Reservoir storage and containment of greenhouse gases, 20:30662 (RA;US)
Resonant second harmonic generation in potassium vapor, 20:30902 (R;US)
Simulation of the Heber geothermal field, a TOUGH2/PC application, 20:29421 (RA;US)
Soil remediation by heat injection: Experiments and numerical modelling, 20:30727 (RA;US)
Some ideas on the choice of designs and materials for cooled mirrors, 20:30470 (R;US)
Status of the SLAC/LBL/LLNL B-Factory and the BaBar detector, 20:30412 (R;US)
Status of the SLAC/LBL/LLNL B-factory and the BABAR detector, 20:30494 (R;US)
Strangeness detection in ALICE experiment at LHC, 20:30530 (RA;US)
Strongly coupled single-phase flow problems: Effects of density variation, hydrodynamic dispersion, and first order decay, 20:30729 (RA;US)
Structural and phonon transmission study of Ge-Au-Ge eutectically bonded interfaces, 20:30520 (R;US)
Studies for dimuon measurement with ALICE, 20:31089 (RA;US)
Surface modification of nickel battery electrodes by cobalt plasma immersion ion implantation and deposition, 20:29813 (R;US)
Surface recombination in semiconductors, 20:30172 (R;US)
Taking an object-oriented view of accelerators, 20:31354 (R;US)
The ALICE Inner Tracking System: Design, physics performance and R&D issues, 20:30533 (RA;US)
The beam envelope equation – Systematic solution for a FODO lattice with space charge, 20:30429 (R;US)
The effect of vadose zone heterogeneities on vapor phase migration and aquifer contamination by volatile organics, 20:30733 (RA;US)
The growth of epitaxial iron oxides on platinum (111) as studied by X-ray photoelectron diffraction, scanning tunneling microscopy, and low energy electron diffraction, 20:30120 (R;US)
The measurement of hadronic observables with the solenoidal tracker at RHIC (STAR), 20:30528 (RA;US)
The RHIC status update, 20:30418 (RA;US)
The role of lanthanides in optical materials, 20:30547 (R;US)
The statistical efficiency of filtered backprojection in emission tomography, 20:30806 (R;US)
The transmission interface constraint problem. Revision, 20:29782 (R;US)
The use of EMCS in building monitoring: Experience from energy edge and LoanSTAR Programs, 20:29908 (R;US)
The use of TOUGH2 for the LBL/USGS 3-dimensional site-scale model of Yucca Mountain, Nevada, 20:29029 (RA;US)
The "INVERSE PROBLEM" to the evaluation of the magnetic fields, 20:30464 (R;US)
Theoretical study of the structure and electronic properties of carbon and $B_XC_YN_Z$ nanotubes, 20:30171 (R;US)
Three dimensional pure permanent magnet undulator design theory, 20:30431 (R;US)
Three-dimensional multiphase effects in aquifer gas storage, 20:28736 (RA;US)
Tradeoffs between measurement residual and reconstruction error in inverse problems with prior information, 20:30805 (R;US)
Transport and sorption of volatile organic compounds and water vapor in porous media, 20:30737 (R;US)
Triple-porosity/permeability flow in faulted geothermal reservoirs: Two-dimensional effects, 20:29409 (RA;US)
Trivalent metallocene chemistry of some uranium, titanium, and zirconium complexes, 20:30240 (R;US)
Use of TOUGH2 on small computers, 20:31357 (RA;US)
Using infrared thermography for the creation of a window surface temperature database to validate computer heat transfer models, 20:29912 (R;US)
Using simulation-optimization techniques to improve multiphase aquifer remediation, 20:30726 (RA;US)
Utility residential new construction programs: Going beyond the code. A report from the Database on Energy Efficiency Programs (DEEP) Project, 20:29909 (R;US)
Utilization of photoconductive gain in a-Si:H devices for radiation detection, 20:30517 (R;US)
Values and the quantum conception of man, 20:30862 (R;US)
Vapor pressure lowering effects due to salinity and suction pressure in the depletion of vapor-dominated geothermal reservoirs, 20:29419 (RA;US)
Verification of T2VOC using an analytical solution for VOC transport in vadose zone, 20:30731 (RA;US)
W_γ and Z_γ production at Tevatron, 20:31010 (R;US)

Lawrence Berkeley Lab., CA (United States). SSC Central Design Group
Cost estimate of initial SSC experimental equipment, 20:30484 (R;US)
Proceedings of the workshop on triggering and data acquisition for experiments at the Supercollider, 20:30524 (R;US)
Report of the magnet length workshop, 20:30483 (R;US)
Report of the Task Force on Collision Hall Limitations, 20:30485 (R;US)
Report of the workshop on Siberian snakes for the SSC collider ring, 20:30486 (R;US)
SSC environmental radiation shielding, 20:30415 (R;US)
Workshop on radiological aspects of SSC operations, 20:30416 (R;US)

Lawrence Livermore National Lab., CA (United States)
A database of wavefront measurements for laser system modeling, optical component development and fabrication process qualification, 20:31265 (R;US)
A new breed of innovative ground water modeling, 20:30759 (R;US)
A nonlinear, implicit, three-dimensional finite element code for solid and structural mechanics - User's Manual, 20:30086 (R;US)
A numerical study of shock-acceleration of a diffuse helium cylinder, 20:31244 (R;US)
A sodium guide star laser system for the Lick Observatory 3 meter telescope, 20:30912 (R;US)
A status report on the development of SAC2000: A new seismic analysis code, 20:31381 (R;US)
Ablative material removal utilizing the copper vapor laser, 20:30323 (R;US)
Absorption of laser light in overdense plasmas by sheath inverse bremsstrahlung, 20:31196 (R;US)
Accelerated degradation studies of MEH-PPV, 20:30191 (R;US)
Acoustic-structure interaction problems. Final report, 20:30076 (R;US)
Adaptive ocean acoustic processing for a shallow ocean experiment, 20:30578 (R;US)
Advanced microinstrumentation for rapid DNA sequencing and large DNA fragment separation, 20:30796 (R;US)
AKAVI containment data report, 20:30617 (R;US)
Alternative algorithms for computational fluid dynamics. Final report, 20:30906 (R;US)
An Automated Land Analysis System (ALAS) for applications at a range of spatial scales: Watershed to global, 20:30760 (R;US)
An efficient algorithm for geocentric to geodetic coordinate conversion, 20:31389 (R;US)
An experimental method for investigating phase transformations in the heat affected zone of welds using synchrotron radiation, 20:30082 (R;US)
An implementation of a medium resolution minefield model in the Joint Conflict Model, 20:30576 (R;US)
An impulse radar array for detecting land mines, 20:30554 (R;US)

Analysis of DOE international environmental management activities, 20:28981 (R;US)
Analysis of the acoustic spectral signature of prosthetic heart valves in patients experiencing atrial fibrillation, 20:30810 (RA;US)
Angular biasing in implicit Monte-Carlo, 20:31277 (R;US)
Application of optical interconnect technology at Lawrence Livermore National Laboratory, 20:31388 (R;US)
ARAC: A support capability for emergency managers, 20:30682 (R;US)
Assessment of the effects of microbially influenced degradation on a massive concrete structure. Final report, Report 5, 20:28972 (R;US)
Automated Data Processing (ADP) research and development, 20:30854 (R;US)
Ball lens reflections by direct solution of Maxwell's equations, 20:30908 (R;US)
Beamlet diagnostics, 20:31238 (RA;US)
Biomimetic methane oxidation. Final report, October 1, 1989–June 1, 1995, 20:28743 (R;US)
CAFE: Computer aided fabric evaluation, 20:29951 (RA;US)
Can solid-state laser technology serve usefully beyond fusion ignition facilities?, 20:31267 (R;US)
Casks (computer analysis of storage casks): A microcomputer based analysis system for storage cask review, 20:28986 (R;US)
Challenges in defining a radiologic and hydrologic source term for underground nuclear test centers, Nevada Test Site, Nye County, Nevada, 20:28984 (R;US)
Characterization and modeling of soft x-ray lasers, 20:31202 (R;US)
Chernobyl Studies Project: Working group 7.0, Environmental transport and health effects. Progress report, March–September 1994, 20:30833 (R;US)
Choppertron II, 20:30487 (R;US)
Chromium removal from ground water by Ion exchange resins, 20:30752 (RA;US)
Clean, agile alternative binders, additives and plasticizers for propellant and explosive formulations, 20:30595 (R;US)
Clementine Star Tracker Stellar Compass: Final report part 1, 20:30559 (R;US)
Clementine Star Tracker Stellar Compass: Final report part 2, 20:30560 (R;US)
Closed-form approach to checking frame design, 20:30317 (R;US)
Collisionless absorption of light waves incident on overdense plasmas with steep density gradients, 20:31282 (R;US)
CombinePlt and CombineThs user manual: Merging multiple, processor-local plot and time-history data bases produced during a parallel calculation, 20:31392 (R;US)
Comments on the kinetic dynamo, 20:31193 (R;US)
Comparison between predicted and actual accuracies for an Ultra-Precision CNC measuring machine, 20:30564 (R;US)
Compilation of the Dakota Aquifer Project isotope data and publications: The Isotope Hydrology Program of the Isotope Sciences Division, 20:30754 (R;US)
Compounds produced by motor burnouts of refrigeration systems, 20:29919 (R;US)
Computational model of drilling with high radiance pulsed lasers. Revision 1, 20:30318 (R;US)
Conceptual design of the National Ignition Facility, 20:31245 (R;US)
Configuring NIF for direct drive experiments, 20:31275 (R;US)
Configuring the National Ignition Facility for direct-drive experiments, 20:31241 (R;US)
Continuous contour phase plates for tailoring the focal plane irradiance profile, 20:31269 (R;US)
Contributions of the National Ignition Facility to the development of inertial fusion energy. Revision 1, 20:31246 (R;US)
Coupled thermal/chemical/mechanical modeling of insensitive explosives in thermal environments, 20:30594 (R;US)
Creating an automated tool for measuring software cohesion, 20:31377 (RA;US)
Criticality concerns in cleaning large uranium hexafluoride cylinders, 20:30319 (R;US)
Crystal structure of actinide metals at high compression, 20:30085 (R;US)
Damage and fracture in large aperture, fused silica, vacuum spatial filter lenses, 20:31266 (R;US)
Defects and morphological concerns in electroluminescent polymers, 20:30192 (R;US)
Derivation of plutonium-239 materials disposition categories, 20:29147 (R;US)
Descriptions of positron defect analysis capabilities, 20:30184 (R;US)
Design and Analysis of a Wiggler Magnet Systems for the SLAC B-Factory LER, 20:30489 (R;US)
Design of a relativistic klystron two-beam accelerator prototype, 20:30488 (R;US)
Design of a substrate heater for calcium hydroxyapatite coating by pulsed laser ablation, 20:30811 (R;US)
Detecting leaks in hydrocarbon storage tanks using electrical resistance tomography, 20:28985 (R;US)
Determination of controlling earthquakes from probabilistic seismic hazard analysis for nuclear reactor sites, 20:29778 (R;US)
Development of beam position monitors for heavy ion recirculators, 20:31252 (R;US)
Development of multielement SQUID arrays for magnetic source imaging. Final report, 20:31152 (R;US)
Development of solid-state induction modulators for high PRF accelerators, 20:30490 (R;US)
Development of XUV-interferometry (155 Å) using a soft x-ray laser, 20:31203 (R;US)
Diffractive coherence in multilayer dielectric gratings, 20:31258 (R;US)
DIII-D Research Operations annual report to the US Department of Energy, October 1, 1993–September 30, 1994, 20:31212 (R;US)
Diode-pumped solid-state laser driver experiments for inertial fusion energy applications, 20:30394 (R;US)
Diode-pumped Yb:$Sr_5(PO_4)_3F$ laser performance, 20:30389 (R;US)
Direct chemical oxidation of hazardous and mixed wastes, 20:28983 (R;US)
Direct electron heating with directional fast wave launch on DIII-D, 20:31214 (R;US)
Disposition of surplus fissile materials via immobilization, 20:28982 (R;US)
Documentation of the AMIP models on the World Wide Web, 20:30676 (R;US)
Double pulse experiment with a velvet cathode on the ATA injector, 20:30624 (R;US)
Dymalloy: A composite substrate for high power density electronic components, 20:30190 (R;US)
Effects of kinetic energy shielding on energy deposition in a biological submunition warhead by low-yield nuclear interceptors, 20:30626 (R;US)
Effects of minerals on the pyrolysis of Kern River 650 F^+ residuum, 20:28706 (R;US)
Effects of space charge in beams for heavy ion fusion, 20:31276 (R;US)
Efficient biased random bit generation for parallel processing, 20:31391 (R;US)
Efficient broadband third harmonic frequency conversion via angular dispersion, 20:31199 (R;US)
EGDM foam shell status report (TAT 95-049), 20:30186 (R;US)
Electric field enhancement in metallic and multilayer dielectric gratings, 20:31270 (R;US)
Energy absorption in aluminum extrusions for a spaceframe chassis, 20:30081 (R;US)
Engineered materials characterization report for the Yucca Mountain Site Characterization Project. Volume 1, Introduction, history, and current candidates, 20:28976 (R;US)
Engineered materials characterization report for the Yucca Mountain Site Characterization Project. Volume 2, Design data, 20:28977 (R;US)
Engineered materials characterization report for the Yucca Mountain Site Characterization Project. Volume 3: Corrosion and data modeling, 20:28978 (R;US)
Engineering development for a small-scale recirculator experiment, 20:31279 (R;US)
Enigmatic electrons, photons, and "empty" waves, 20:30958 (R;US)
EQ3/6 V7.2B. Geochemical Modeling Of Aqueous Systems, 20:31323 (CM;US)

EQ3/6 V7.2B. Geochemical Modeling of Aqueous Systems, 20:31324 (CM;US)
Establishment of data base of regional seismic recordings from earthquakes, chemical explosions and nuclear explosions in the Former Soviet Union, 20:30619 (R;US)
Estimates of zonally averaged tropical diabatic heating in AMIP GCM simulations. PCMDI report No. 25, 20:30674 (R;US)
Ethylene oxidation in a well-stirred reactor, 20:30276 (R;US)
EUVE observations of VW Hydri in superoutburst, 20:30915 (R;US)
Evaluating the ISDN line to deliver interactive multimedia experiences, 20:31376 (RA;US)
Evaluation of ARAC's participation in a long-range transport experiment, 20:30678 (R;US)
Experimental overview of axion searches, 20:31031 (R;US)
Experimental study of ELF signatures developed by ballistic missile launch, 20:30575 (R;US)
Experiments and modeling with a large-area inductively coupled plasma (ICP) source, 20:31198 (R;US)
Extreme ultraviolet spectroscopy of the Seyfert 1 galaxy Markarian 478, 20:30911 (R;US)
Fault tolerance of the NIF power conditioning system, 20:31284 (R;US)
Final report for 1.7 megajoule prototype bank testing, 20:30385 (R;US)
Final report on the LLNL compact torus acceleration project, 20:31240 (R;US)
Flux limiting nature's own way – A new method for numerical solution of the transport equation, 20:31100 (R;US)
Freeze-out of carbon monoxide in calorimetry tests, 20:30601 (R;US)
Frequency response characteristics and response spectra of base-isolated and un-isolated structures, 20:30324 (R;US)
Full aperture laser conditioning of multilayer mirrors and polarizers, 20:31259 (R;US)
Fully relativistic surface green function and its application to surface spectroscopies, 20:31104 (R;US)
Generation of pseudotachylites in shock experiments: Implications for impact cratering products and processes, 20:30354 (R;US)
Generation of x-ray pulses with rapid rise times to pump inner-shell photo-ionized x-ray lasing in carbon at 45 Å, 20:30388 (R;US)
Genesis Eco Systems, Inc. soil washing process, 20:30753 (R;US)
Genetic algorithms using SISAL parallel programming language, 20:31378 (RA;US)
Geothermal areas as analogues to chemical processes in the near-field and altered zone of the potential Yucca Mountain, Nevada repository, 20:28979 (R;US)
Growth response of Pinus ponderosa seedlings and mature tree branches to acid rain and ozone exposure, 20:30677 (R;US)
High efficiency gratings for beam steering on the National Ignition Facility (NIF) laser, 20:31257 (R;US)
High resolution extremity CT for biomechanics modeling, 20:30812 (R;US)
High-power copper vapour lasers and applications, 20:30395 (R;US)
Historical review of plutonium storage container failures at Lawrence Livermore National Laboratory, 20:28782 (R;US)

Shock initiation of 2,4-dinitroimidazole (2,4-DNI), 20:30598 (R;US)
Shock initiation of an ϵ-CL-20-estane formulation, 20:30596 (R;US)
Shock wave measurements, 20:31123 (R;US)
Silicon microbench heater elements for packaging opto-electronic devices, 20:30392 (R;US)
Simulation of phase structures, 20:31380 (R;US)
Site characterization criteria (DOE-STD-1022-94) for natural phenomena hazards at DOE sites. Revision 1, 20:29034 (R;US)
Sodium carbonate salt transport system, 20:28987 (R;US)
Sonoluminescence, shock waves, and micro-thermonuclear fusion, 20:30913 (R;US)
Source terms for plutonium aerosolization from nuclear weapon accidents, 20:30834 (R;US)
Sources of strain in rapidly grown crystals of KH_2PO_4, 20:30185 (R;US)
Special parallel processing workshop, 20:31314 (R;US)
Specification of optical components using the power spectral density function, 20:30393 (R;US)
Statement of capabilities: Micropower Impulse Radar (MIR) technology applied to mine detection and imaging, 20:30552 (R;US)
Stimulated dual-band infrared computed tomography: A tool to inspect the aging infrastructure, 20:30353 (R;US)
Survey of portable radiological instrumentation at 16 DOE sites, 20:30535 (R;US)
Survey of the degradation modes of candidate materials for high-level radioactive waste disposal containers, 20:30075 (R;US)
Synthesis, characterization, and modeling of hydrogen storage in carbon aerogels, 20:30188 (R;US)
Techniques for in situ HVEM mechanical deformation of nanostructural materials, 20:30084 (R;US)

The applicability of sample collection and analysis in support of nuclear arms control agreements, 20:29988 (R;US)
The effect of horizontal resolution on cloud radiative forcing in the ECMWF model. PCMDI report No. 22, 20:30673 (R;US)
The effect of increased levels of carbon dioxide on chlorophyll fluorescence and photosynthetic pigments in pinus ponderosa, 20:30671 (RA;US)
The evolution and explosion of massive Stars II: Explosive hydrodynamics and nucleosynthesis, 20:30907 (R;US)
The interaction of flow, heat transfer, and free interfaces in an electron-beam vaporization system for metals, 20:30079 (R;US)
The measurement and analysis of wavefront structure from large aperture ICF optics, 20:31271 (R;US)
The mixed waste management facility. Monthly report, January 1995, 20:28973 (R;US)
The mixed waste management facility. Monthly report, 20:28974 (R;US)
The mixed waste management facility, FY95 plan, 20:28975 (R;US)
The NASA B-757 HIRF test series: Low power on-the-ground tests, 20:30328 (R;US)
The National Ignition Facility front-end laser system, 20:31249 (R;US)
The origin and evolution of the optics specifications for the National Ignition Facility, 20:31243 (R;US)
The parallel I/O architecture of the high performance storage system (HPSS). Revision 1, 20:31384 (R;US)
The PEP-II-Factory septum quadrupole magnets, 20:30500 (R;US)
The physics of radiation driven ICF hohlraums, 20:31280 (R;US)
The role of risk-based prioritization in total quality management, 20:31310 (R;US)
The synthesis and characterization of new iron coordination complexes utilizing an asymmetric coordinating chelate ligand, 20:29376 (R;US)
Theoretical description of laser melt pool dynamics, Task order number B239634, Quarter 3 report, 20:30386 (R;US)
Thermal management in inertial fusion energy slab amplifiers, 20:31261 (R;US)
Three dimensional simulations of a small induction recirculator accelerator, 20:31253 (R;US)
Three dimensional simulations of space charge dominated heavy ion beams with applications to inertial fusion energy, 20:31285 (R;US)
Time-resolved temperatures of shocked and detonating energetic materials, 20:30600 (R;US)
Time-resolved x-ray imaging of high-power laser-irradiated underdense silica aerogels and agar foams, 20:31247 (R;US)
Transport of a partially-neutralized ion beam in a heavy-ion fusion reactor chamber, 20:31250 (R;US)
Transportation environmental safety analysis of the commercial movement of low enriched uranium (LEU) from DOE sites to the Oak Ridge Y-12 Plant, 20:28783 (R;US)
Two dimensional beam smoothing by spectral dispersion for direct drive inertial confinement fusion, 20:31274 (R;US)
U.S./Russian Laboratory-to-Laboratory MPC&A Program at the VNIITF Institute, Chelyabinsk-70, 20:29149 (R;US)
Ultra high resolution soft x-ray tomography, 20:30556 (R;US)
Uncertainties in global ocean surface heat flux climatologies derived from ship observations, 20;30780 (R;US)
Unsteady flow volumes, 20:30345 (R;US)
Update on diode-pumped solid-state laser experiments for inertial fusion energy, 20:31239 (R;US)
Using an intelligent nuclear sensor in the "Cooperative Corral" scenario, 20:30616 (R;US)
Using the bootstrap in a multivariadte data problem: An example, 20:31390 (R;US)
Variable stars in the MACHO Collaboration database, 20:30910 (R;US)
Variational structure of inverse problems in wave propagation and vibration, 20:30909 (R;US)
Verifying the secure setup of Unix client/servers and detection of network intrusion, 20:31386 (R;US)
VIEW. Signal and Image Processing Operations, 20:31322 (CM;US)
Waste acid recycling via diffusion dialysis, 20:29952 (R;US)
White light velocity interferometry, 20:30555 (R;US)
Wiggler insertion of the PEP-II B-Factory LER, 20:30501 (R;US)
X-ray framing cameras for > 5 keV imaging, 20:31197 (R;US)
X-ray laser interferometry for probing high-density plasmas, 20:31200 (R;US)
X-ray spectroscopy and imaging of a plasma collision, 20:31201 (R;US)

Lawrence Livermore National Lab., CA (United States). Hazards Control Dept.
HOTSPOT. Gaussian Dispersion Model for Radioactive Materials, 20:31333 (CM;US)

Lehigh Univ., Bethlehem, PA (United States)
No decomposition in non-reducing atmospheres. Technical progress report, December 1994–February 1995, 20:28655 (R;US)

Little (Arthur D.), Inc., Cambridge, MA (United States)
Multi-fuel reformers for fuel cells used in transportation: Assessment of hydrogen storage technologies. Phase 2: Final report, 20:29190 (R;US)

Lockheed Idaho Technologies Co., Idaho Falls, ID (United States)
Buried Waste Integrated Demonstration fiscal Year 1994 close-out report, 20:28848 (R;US)
Catalog of documents produced by the Greater-Than-Class C Low-Level Waste Management Program, 20:28836 (R;US)
Commercial low-level radioactive waste disposal in the US, 20:28847 (R;US)
Conceptual design report for a transportable DUCRETE spent fuel storage cask system, 20:28779 (R;US)
DOE Hydropower Program biennial report 1994–1995 with an updated annotated bibliography, 20:29383 (R;US)
Environmental surveillance for Waste Management Facilities at the Idaho National Engineering Laboratory. Annual report 1994, 20:30711 (R;US)
Evaluation of a potential nuclear fuel repository criticality: Lessons learned, 20:30287 (R;US)
Evaluation of radiological releases from the Tomsk-7 accident, 20:30657 (R;US)
Gate valve and motor-operator research findings, 20:29517 (R;US)
Greater-Than-Class C Low-Level Radioactive Waste Transportation Strategy report and institutional plan, 20:28777 (R;US)
HEPA filter leaching concept validation trials at the Idaho Chemical Processing Plant, 20:29092 (R;US)
ICPP radioactive liquid and calcine waste technologies evaluation final report and recommendation, 20:28829 (R;US)
Idaho National Engineering Laboratory radiological control performance indicator report. Fourth quarterly calendar year 1994, 20:30823 (R;US)
Impact assessment of draft DOE Order 5820.2B. Radioactive Waste Technical Support Program, 20:28817 (R;US)
Introduction to radiological performance assessment, 20:28813 (R;US)
Lead use and recycling at the INEL, 20:28844 (R;US)
Lessons learned from the introduction of cockpit automation in advanced technology aircraft, 20:29523 (R;US)
Life cycle cost estimation and systems analysis of Waste Management Facilities, 20:28838 (R;US)
National Low-Level Waste Management Program Radionuclide Report Series: Volume 12, Cobalt-60, 20:28810 (R;US)
National Low-Level Waste Management Program radionuclide report series. Volume 13, Curium-242, 20:28811 (R;US)
Nondestructive examination technologies for inspection of radioactive waste storage tanks, 20:28850 (R;US)
Organizational safety factors research lessons learned, 20:29091 (R;US)
Parameter uncertainty for ASP models, 20:29581 (R;US)
RELAP5/MOD3 code manual. Volume 4, Models and correlations, 20:29773 (R;US)
RELAP5/MOD3 code manual: Code structure, system models, and solution methods. Volume 1, 20:29772 (R;US)
Reliability evaluation methodologies for ensuring container integrity of stored transuranic (TRU) waste, 20:28841 (R;US)
Results of the gamma-neutron mapper performance test on 55-gallon drums at the RWMC, 20:28846 (R;US)

US Hydropower Resource Assessment for Massachusetts, 20:29379 (R;US)
US hydropower resource assessment for Rhode Island, 20:29381 (R;US)
Waste Management Facilities cost information for low-level waste, 20:28831 (R;US)
Waste Management Facilities cost information for mixed low-level waste. Revision 1, 20:28832 (R;US)
Waste management facilities cost information for hazardous waste. Revision 1, 20:28833 (R;US)

Lockheed Martin Utility Services, Inc., Oak Ridge, TN (United States)
Verification of criticality accident alarm system detector locations for the X-326 process cell floor, 20:30310 (R;US)

Lodestar Research Corp., Boulder, CO (United States)
Thomson scattering diagnostic analyses to determine the energetic particle distributions in TFTR. Final report, 20:31158 (R;US)

Long Beach City Dept. of Oil Properties, CA (United States)
Increasing waterflood reserves in the Wilmington oil field through improved reservoir characterization and reservoir management. Quarterly technical progress report, March 21, 1995–June 30, 1995, 20:28679 (R;US)

Los Alamos National Lab., NM (United States)
800-MeV proton irradiation of thorium and depleted uranium targets, 20:31072 (RA;US)
A 100 ps gated x-ray spectrometer, 20:30515 (R;US)
A beamline systems model for Accelerator-Driven Transmutation Technology (ADTT) facilities, 20:29549 (RA;US)
A comparison of hydrogen vehicle storage options using the EPA urban driving schedule, 20:29191 (R;US)
A dynamic explosive model for MACH2 with applications to magnetic flux compression generators, 20:30583 (R;US)
A high gain energy amplifier operated with fast neutrons, 20:28865 (RA;US)
A long view of global plutonium management, 20:29129 (RA;US)
A molecular architectural approach to second-order nonlinear optical materials, 20:30237 (R;US)
A neural computation approach to the set covering problem, 20:31348 (R;US)
A proton-driven, intense, subcritical, fission neutron source for radioisotope production, 20:29547 (RA;US)
A rad-hard, steady state, digital imaging bolometer system for ITER, 20:31184 (R;US)
A reduced grid model for shallow flows on the sphere, 20:30661 (R;US)
A repository released-dose model for the evaluation of long-lived fission product transmutation effectiveness, 20:30721 (R;US)
A systems framework for nonproliferation research and development, 20:29983 (R;US)
A target development program for beamhole spallation neutron sources in the megawatt range, 20:28870 (RA;US)
About the possibility of use of different types of targets as a neutron source for subcritical nuclear reactor driven by particle beam accelerator, 20:29564 (RA;US)
Accelerator driven reactors and nuclear waste management projects in the Czech Republic, 20:28880 (RA;US)
Accelerator driven transmutation technologies conference wrap-up, 20:28888 (RA;US)
Accelerator-based transmuter-breeder and energy producer from transuranic actinides and thorium, 20:29550 (RA;US)
Accelerator-driven nuclear synergetic systems-an overview of the research activities in Sweden, 20:28876 (RA;US)
Actinide and Xenon reactivity effects in ATW high flux systems, 20:29552 (RA;US)
Actinide removal from molten salts by chemical oxidation and salt distillation, 20:29557 (RA;US)
Adaptation of a nucleon-nucleus elastic scattering model for LAHET™, 20:31068 (R;US)
Advanced manufacturing technology task. Final report, February–September 1990, 20:28862 (R;US)
Algorithm for genome contig assembly. Final report, 20:30799 (R;US)
An acclerator-based installation of small power with the lead-bismuth coolant, 20:29546 (RA;US)
An active target for the accelerator-based transmutation system, 20:29541 (RA;US)
An analysis of containment, surveillance, and authentication for software, 20:31338 (R;US)
An application of multisurface plasticity theory: Yield surfaces of textured materials, 20:30051 (R;US)
An overview of Russian experience and capabilities for development of ATW/ABC systems, 20:28874 (RA;US)
An overview of the PIREX Proton Irradiation facility and its research program, 20:30052 (RA;US)
An update on measurements of helium-production reactions with a spallation neutron source, 20:31069 (R;US)
Apparatus for separating and collecting hydrogen gas, 20:28920 (PA;US)
Applications of LabVIEW programming in a glovebox environment, 20:30296 (R;US)
Aquatic invertebrate sampling at selected outfalls in Operable Unit 1082; Technical areas 9, 11, 16 and 22, 20:30839 (R;US)
Assembly and testing of a composite heat pipe thermal intercept for HTS current leads, 20:31151 (R;US)
ATW neutron spectrum measurements at LAMPF, 20:31073 (RA;US)
Baseline radionuclide concentrations in soils and vegetation around the proposed Weapons Engineering Tritium Facility and the Weapons Subsystems Laboratory at TA-16, 20:29028 (R;US)
Basic aspects of spallation radiation damage to materials, 20:30460 (RA;US)
Beam physics design strategy for a high-current rf linac, 20:30424 (RA;US)
Behavior of structural and target materials irradiated in spallation neutron environments, 20:29565 (RA;US)
Benefits and risks of P & T of nuclear waste, 20:28881 (RA;US)
Beyond the CM-5: A case study in performance analysis for the CM-5, T3D, and high performance RISC workstations, 20:31345 (R;US)
Brief overview of the long-lived radionuclide separation processes developed in France in connection with the SPIN program, 20:28770 (RA;US)
Calibration and use of a rugged new piezoresistive pressure transducer, 20:30587 (R;US)
Capacitor and rail-gap development for the Atlas machine Marx modules, 20:31223 (R;US)
Centrifugal separation for miscible solutions: Fundamentals and applications to separation of molten salt nuclear material, 20:29559 (RA;US)
Charge Transfer Efficiency modeling/measurements as function of CCD pixel rate, 20:30363 (R;US)
Chemical destruction of HMX-based explosives with ammonium hydroxide, 20:30582 (R;US)
Chemico-technological support of transmutation objectives: Solid, molten salt and liquid blanket, 20:28887 (RA;US)
Chemistry of pyroprocessing for nuclear waste transmutation, 20:28773 (RA;US)
Combining a gas turbine modular helium reactor and an accelerator and for near total destruction of weapons grade plutonium, 20:29131 (RA;US)
Comparing calculated and measured x-ray images, 20:31185 (R;US)
Computational support for ITS and PHERMEX. Final report, 20:30451 (R;US)
Conception of electron beam-driven subcritical molten salt ultimate safety reactor, 20:29544 (RA;US)
Constitutive modeling for hypervelocity cratering, 20:30037 (R;US)
Constitutive modeling using the Taylor impact test, 20:30036 (R;US)
Continued study of the effects of heat treatment and microstructure on electrocatalyst performance. Final report, July 29, 1991–December 20, 1991, 20:29891 (R;US)
Convective instabilities in liquid centrifugation for nuclear wastes separation, 20:29560 (RA;US)
Cost optimisation studies of high power accelerators, 20:30407 (RA;US)
Criticality benchmark results for the ENDF60 library with MCNP™, 20:29501 (R;US)

Cross-section activation measurement for U-238 through protons and deuterons in energy interval 10-14 MeV, 20:31074 (RA;US)
Deformation response of Zr after shock-loading, 20:30038 (R;US)
Design considerations and evaluations of an accelerator-driven fluid fuel transmuter, 20:29545 (RA;US)
Design of high-energy high-current linac with focusing by superconducting solenoids, 20:30406 (RA;US)
Design of the individual Marx modules for the Atlas machine 36 megajoule, 25 megampere capacitor bank, 20:31224 (R;US)
Determination of maximum reactor power level consistent with the requirement that flow reversal occurs without fuel damage, 20:29586 (R;US)
Development of a toroidal-filter H^- ion source, 20:30457 (R;US)
Development of advanced technological systems for accelerator transmutation, 20:28868 (RA;US)
Development of out-of-core fast Fourier transform software for the connection machine. Final report, 20:31341 (R;US)
Diffusion of a protein in configuration space, 20:30790 (R;US)
Direct irradiation of long-lived fission products in an ATW system, 20:28883 (RA;US)
DT neutron measurements and experience on TFTR, 20:31182 (R;US)
Ductile damage modeling based on void coalescence and percolation theories, 20:30042 (R;US)
Economic impacts study, 20:30567 (R;US)
Effects of corotating interaction regions on ULYSSES high energy particles, 20:30901 (R;US)
Effects of soluble organic complexants and their degradation products on the removal of selected radionuclides from high-level waste. Part 3, Distributions of Sr, Cs, Tc, Pu, and Am onto 33 absorbers from four variations of a 3:1 dilution of Hanford complexant concentrate (CC) simulant: Part 4, The effects of varying dilution ratios on the distributions of Sr, Cs, Tc, Pu, and Am onto 12 absorbers, 20:28860 (R;US)
Electrical resistivity measurements of a dense aluminum plasma, 20:30900 (R;US)
Electrochemical separation of actinides and fission products in molten salt electrolyte, 20:28771 (RA;US)
Electronic properties of U_2Pt_2Sn, 20:30041 (R;US)
Electronic properties of UCuSn, 20:30043 (R;US)
Elevated temperature stress strain behavior of beryllium powder product, 20:30047 (R;US)
Emittance growth and halo formation in charge-dominated beams, 20:30425 (RA;US)
Environmental geochemistry for surface and subsurface waters in the Pajarito Plateau and outlying areas, New Mexico, 20:30717 (R;US)

Preconceptual ABC design definition and system configuration layout: Appendix A, 20:29127 (R;US)
Prioritization methodology using hazard analysis results at Los Alamos National Laboratory, 20:29842 (R;US)
Proton-beam window design for a transmutation facility operating with a liquid lead target, 20:30458 (RA;US)
Quantum crytography over 14km of installed optical fiber, 20:31349 (R;US)
Quark model calculations of symmetry breaking in parton distributions, 20:30955 (R;US)
RADFLO physics and algorithms, 20:30602 (R;US)
Radiation-induced segregation in materials: Implications for accelerator-driven neutron source applications, 20:30169 (RA;US)
Radionuclide contaminant analysis of small mammals at Area G, TA-54, 1994, 20:29027 (R;US)
RAMI analysis and modeling for the LANSCE accelerator systems, 20:30410 (RA;US)
Reliability and availability considerations in the RF systems of ATW-class accelerators, 20:30461 (RA;US)
Research on hydrogen effects on phase distribution ahead of propagating cracks in stainless steel. Final report, 20:30035 (R;US)
Research on Mega-Math: Discrete mathematics and computer science for children. Final report, 20:31296 (R;US)
Residual stress and microstructural characterization using Rietveld refinement of a carburized layer in a 5120 steel, 20:30049 (R;US)
Resonant ultrasound spectroscopy for materials studies and nondestructive testing, 20:29990 (R;US)
Response of $CeRh_2Si_2$ to pressure, 20:30116 (R;US)
Robust controller design of four wheel steering systems using mu synthesis techniques, 20:29975 (R;US)
Safety and control of accelerator-driven subcritical systems, 20:29588 (RA;US)
Safety features of subcritical fluid fueled systems, 20:29589 (RA;US)
Scale up of flow in porous media, 20:30722 (R;US)
Searches for T-odd interactions in nuclear processes: Review of the theory, 20:30954 (R;US)
Semi-Lagrangian shallow water modeling on the CM-5, 20:30894 (R;US)
Shock compression of liquid hydrazine, 20:30257 (R;US)
Simulation of radioactive waste transmutation on the t.node parallel computer, 20:28879 (RA;US)
Site layout and balance of plant design for an accelerator-driven materials processing complex, 20:28878 (RA;US)
Solution assembly of cytokine receptor ectodomain complexes, 20:30789 (R;US)
Some basic advantages of accelerator-driven transmutation of minor actinides and iodine-129, 20:29563 (RA;US)
Some nuclear safety aspects of the Los Alamos accelerator based converion concept, 20:29590 (RA;US)
Spall behavior and damage evolution in tantalum, 20:30044 (R;US)
Spallation studies at Saturne, 20:31070 (RA;US)
Spatial and frequency coherence of oblique, one-hop, high-frequency paths, 20:30887 (R;US)
Specialized beam diagnostic measurements for an ADTT accelerator funnel, 20:30462 (RA;US)
Specific contributions of the Dutch programme "RAS" towards accelerator-based transmutation, 20:28877 (RA;US)
Spectral analysis of the turbulent mixing of two fluids, 20:30340 (R;US)
Spectroscopic studies of U(VI) sorption at the kaolinite-water interface. Final report, 20:30720 (R;US)
Static and dynamic analysis of the APT superconducting cavities, 20:30454 (R;US)
Status of electro-nuclear facilities development in ITEP, 20:29130 (RA;US)
Status of nuclear data for actinides, 20:31077 (RA;US)
Strong interaction physics with pions at LAMPF: Report of the study group on future opportunities at LAMPF, 20:31009 (R;US)
Structure and properties of metal hydrides prepared by mechanical alloying, 20:30115 (R;US)
Studies of sliding friction in compressed copper, 20:30045 (R;US)
Study of the burning capability of the Los Alamos ATW system, 20:28884 (RA;US)
Subcritical neutron generator-test facility for nuclear waste transmutation studies, 20:29561 (RA;US)
Subpicosecond compression experiments at Los Alamos National Laboratory, 20:30456 (R;US)
Summary of experiments and data breakout group, 20:31081 (RA;US)
Summary of the Accelerator-Driven Transmutation Technologies and their applications, 20:30411 (RA;US)
Summary of the materials breakout group, 20:30054 (RA;US)
Summary of the separations breakout group, 20:29568 (RA;US)

Summary of the target-blanket breakout group, 20:29567 (RA;US)
Summer 1994 Computational Science Workshop. Final report, 20:31339 (R;US)
Suprathermal electron loss cone distributions in the solar wind: Ulysses observations, 20:30893 (R;US)
Synthesis of uranium metal using laser-initiated reduction of uranium tetrafluoride by calcium metal, 20:28767 (R;US)
Technical analysis of US Army Weapons Systems and related advanced technologies of military interest. Final report, 20:30568 (R;US)
Technology transfer: Half-way houses. No. 17, 20:29851 (R;US)
Testing of the ENDF/B-VI neutron data library ENDF60 for use with MCNP™, 20:29498 (R;US)
The ACL Message Passing Library, 20:31351 (R;US)
The application of a neural network methodology to the analysis of a dyeing operation, 20:29941 (R;US)
The chemistry of ABC, 20:29556 (RA;US)
The coherent acceleration of ultra high energy cosmic rays and the galactic dynamo, 20:30889 (R;US)
The concept of electro-nuclear facility for useful power generation and minor actinides transmutation, 20:29543 (RA;US)
The concept of the double-purpose electro-nuclear facility, 20:29554 (RA;US)
The current status and possible future of the Los Alamos spallation radiation effects facility, 20:30298 (RA;US)
The DBV stars: Progress and problems, 20:30899 (R;US)
The effect of structural defects in SiC particles on the static & dynamic mechanical response of a 15 volume percent SiC/6061-Al matrix composite, 20:30040 (R;US)
The effects of structural setting on the azimuthal velocities of blast induced ground motion in perlite, 20:30357 (R;US)
The extraction of some trivalent elements with Aliquat-336, 20:28886 (RA;US)
The furnace in the basement: Part 1, The early days of the Hot Dry Rock Geothermal Energy Program, 1970–1973, 20:29423 (R;US)
The influence of external source intensity in accelerator/target/blanket system on conversion ratio and fuel cycle, 20:29555 (RA;US)
The LANL/LLNL/AFTAC Black Thunder Coal Mine regional mine monitoring experiment, 20:29986 (R;US)
The linear algebraic method for electron-molecule collisions, 20:31107 (R;US)
The Los Alamos/Arzamas-16 collaboration of ultrahigh magnetic fields and ultrahigh energy pulsed power, 20:31225 (R;US)
The Manuel Lujan Jr. Neutron Scattering Center (LANSCE) experiment reports 1993 run cycle. Progress report, 20:31099 (R;US)
The MCLIB library: Monte Carlo simulation of neutron scattering instruments, 20:31128 (R;US)
The neutronics of an Accelerator-Driven Energy Amplifier, 20:29591 (RA;US)
The physics design of accelerator-driven transmutation systems, 20:28871 (RA;US)
The PIREX proton irradiation facility, 20:31226 (RA;US)
The possibility of fuel cycle design for ABC/ATW complex with molten fuel on LiF-BeF_2 basis, 20:29558 (RA;US)
The relationship between neutron multiplication and k_{eff}, 20:30294 (R;US)
The results of the investigations of Russian Research Center - "Kurchatov Institute" on molten salt applications to problems of nuclear energy systems, 20:29540 (RA;US)
The search for proton decay, 20:31008 (R;US)
The structure, properties and performance of plasma-sprayed beryllium for fusion applications, 20:30046 (R;US)
The unsaturated hydraulic characteristics of the Bandelier Tuff, 20:30718 (R;US)
The use of particle tracks in problem analysis, 20:29500 (R;US)
Thermoacoustic imaging using heavy ion beams, 20:31135 (R;US)
Through-the-electrode model of a proton exchange membrane fuel cell with independently measured parameters, 20:29892 (R;US)
Towards heterogeneous distributed debugging, 20:31342 (R;US)
TRANSIMS: TRansportation ANalysis and SIMulation System, 20:29921 (R;US)
Transionospheric chirp event classifier, 20:30892 (R;US)
Transmutation and inventory analysis in an ATW molten salt system, 20:29553 (RA;US)
Transmutation of fission products and actinide waste at Hanford, 20:29562 (RA;US)
Transmutation studies at CEA in frame of the SPIN program objectives, results and future trends, 20:28866 (RA;US)
Transport and magnetism correlations in thin-film ferromagnetic oxides, 20:30117 (R;US)
Triton burnup study in JT-60U, 20:31181 (R;US)
Ulysses solar wind plasma observations from peak southerly latitude through perihelion and beyond, 20:30897 (R;US)
UNICORN: Misuse detection for UNICOS, 20:31344 (R;US)
Use of pyroprocessing in the preparation of spent fuel for transmutation, 20:28885 (RA;US)
Using a hot dry rock geothermal reservoir for load following, 20:29418 (R;US)
Waste transmutation with minimal fuel cycle long-term risk, 20:28873 (RA;US)
Water supply at Los Alamos during 1992, 20:30774 (R;US)
Wavelet subband coding of computer simulation output using the A++ array class library, 20:30849 (R;US)
Wide-area Gigabit networking: Los Alamos HIPPI-SONET Gateway, 20:31346 (R;US)
X-ray emission from colliding laser plasmas, 20:31179 (R;US)
X-ray source production in foil implosion machines, 20:29171 (R;US)
"Transmutation efficiency calculation in the blanket on melted salts with central neptunium target", 20:29548 (RA;US)

Louisiana State Univ., Baton Rouge, LA (United States). Dept. of Petroleum Engineering
Assist in the recovery of bypassed oil for reservoirs in the Gulf of Mexico. Annual report, February 1994–February 1995, 20:28677 (R;US)

Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM (United States). Inhalation Toxicology Research Inst.
Cancer from internal emitters, 20:30822 (R;US)
Possible uses of animal databases for further statistical evaluation and modeling, 20:30821 (R;US)

M

Martin Marietta Astro Space, King of Prussia, PA (United States)
GPHS-RTGs in support of the Cassini Mission. Semi-annual technical progress report, April 3, 1995–October 1, 1995, 20:29182 (R;US)

Martin Marietta Astro Space, Philadelphia, PA (United States)
On-Orbit Asset Management System, September 1995. Final report, 20:29488 (R;US)

Maryland Univ., College Park, MD (United States)
A Bayesian approach to model uncertainty, 20:29596 (RA;US)
A commentary on model uncertainty, 20:29593 (RA;US)
Addressing model uncertainty in dose-response: The case of chloroform, 20:29605 (RA;US)
Aspects of modeling uncertainty and prediction, 20:29597 (RA;US)
Computerized fire risk assessment models: A regulatory effectiveness analysis, 20:29604 (RA;US)
Dealing with phenomenological uncertainty in risk analysis, 20:29603 (RA;US)
Empirical Bayesian inference and model uncertainty, 20:29607 (RA;US)
Implications of model uncertainty for the practice of risk assessment, 20:29595 (RA;US)
Individual model evaluation and probabilistic weighting of models, 20:29600 (RA;US)
Model uncertainty and probability, 20:29594 (RA;US)
Model uncertainty from a regulatory point of view, 20:29602 (RA;US)
Model uncertainty: Probabilities for models?, 20:29601 (RA;US)
On the estimation of failure rates for living PSAs in the presence of model uncertainty, 20:29606 (RA;US)
Some concepts of model uncertainty for performance assessments of nuclear waste repositories, 20:28903 (RA;US)
Some illustrative examples of model uncertainty, 20:29599 (RA;US)

Statistics of past errors as a source of safety factors for current models, 20:29608 (RA;US)
Uncertainty and its propagation in dynamics models, 20:29598 (RA;US)

Massachusetts Inst. of Tech., Cambridge, MA (United States)
Coal plasticity at high heating rates and temperatures. Final technical progress report, 20:28637 (R;US)

Massachusetts Inst. of Tech., Cambridge, MA (United States). Dept. of Chemical Engineering
Direct catalytic decomposition of nitric oxide. Final report, 20:28650 (R;US)

Massachusetts Univ., Amherst, MA (United States)
The production of $\pi^{\pm}$, $K^{\pm}$, p, k^0 and Λ^0 in hadronic Z^0 decays, 20:31015 (R;US)

Maurer Engineering, Inc., Houston, TX (United States)
Development and testing of underbalanced drilling products, 20:28701 (R;US)
High-power slim-hole drilling system, 20:28740 (R;US)

Max-Planck-Institut fuer Meteorologie, Hamburg (Germany)
Interactions between ocean circulation and the biological pumps in the global warming, 20:30652 (R;DE)
Statistically optimal approaches to detecting anthropogenic climate change, 20:30649 (R;DE)

Medical Univ. of South Carolina, Charleston, SC (United States)
Summer Undergraduate Research Program: Environmental studies, 20:30631 (R;US)

Melbourne Univ., Parkville, VIC (Australia). School of Physics
{11-bar 01} twin dislocation structures in evaporated titanium thin films, 20:30087 (R;AU)
A meson-exchange isobar model for the $\pi^+d \rightleftarrows pp$ reaction, 20:31020 (R;AU)
An evaluation of diverse methods of obtaining effective Schroedinger interaction potentials for elastic scattering, 20:31051 (R;AU)
An octonionic gauge theory, 20:30961 (R;AU)

The quest for quantum gravity, 20:30867 (R;AU)
Transverse electric form factors for electron scattering and violation of current conservation in nuclear models, 20:31019 (R;AU)
Transverse polarization of top quarks produced at a photon-photon collider, 20:31033 (R;AU)
Two body potentials from quantal inversion of differential cross section data, 20:31049 (R;AU)

Merex Corp. (United States)
Now Enhancing Working Skills: The "NEWS" Program. Final report, 20:31295 (R;US)

Michigan Univ., Ann Arbor, MI (United States). Dept. of Nuclear Engineering
Advanced semiconductor detector development: Development of a room-temperature, gamma ray detector using gallium arsenide to develop an electrode detector. Progress report, September 30, 1994–September 29, 1995, 20:30505 (R;US)

Micro Analysis and Design, Boulder, CO (United States)
Using micro saint to predict performance in a nuclear power plant control room, 20:29527 (R;US)

Mine Safety and Health Administration, Arlington, VA (United States)
Delineation of Piceance Basin basement structures using multiple source data: Implications for fractured reservoir exploration, 20:28732 (RA;US)
Development and utilization strategies for recovery and utilization of coal mine methane, 20:28738 (RA;US)
Gas-and water-saturated conditions in the Piceance Basin, Western Colorado: Implications for fractured reservoir detection in a gas-centered coal basin, 20:28733 (RA;US)
Integrated exploration strategy for locating areas capable of high gas rate cavity completion in coalbed methane reservoirs, 20:28737 (RA;US)
Recent federal initiatives to promote unconventional gas: High octane delivery of just hot air?, 20:28739 (RA;US)
Structurally controlled and aligned tight gas reservoir compartmentalization in the San Juan and Piceance Basins, 20:28734 (RA;US)

Mission Research Corp., Albuquerque, NM (United States)
Computational support for ITS and PHERMEX. Final report, 20:30451 (R;US)

Mississippi Forest Products Utilization Lab., Mississippi State, MS (United States)
Develop apparatus and process for second-stage drying. Quarterly progress report, June 27, 1995–September 26, 1995, 20:29925 (R;US)

Monsanto Chemical Co., Dayton, OH (United States)
A new device for filtering hydrofluoric acid and other strong acids. Information report, 20:30209 (R;US)
Calorimetry research progress report, March 1–31,, 1948, 20:30521 (R;US)
Control Section progress report, April 1–30, 1948, 20:30606 (R;US)
Electrodeposition research progress report, March 1–31, 1948, 20:30247 (R;US)
Monsanto Chemical Company, Unit 3 progress report, January 1–15, 1948, 20:29174 (R;US)
Monsanto Chemical Company, Unit 3 progress report, January 16–31, 1948, 20:29156 (R;US)
Monsanto Chemical Company, Unit 3 progress report, January 16–31, 1948, 20:30246 (R;US)
Neutron source progress report, April 1–30, 1948, 20:29175 (R;US)

Physics group process report, April 1–30, 1948, 20:29160 (R;US)
Physics progress report, March 1–31, 1948, 20:29158 (R;US)
Process research progress report, February 16–29, 1948, 20:29157 (R;US)
Process research progress report, March 1–31, 1948, 20:29159 (R;US)
Process Section progress report, April 1–30, 1948, 20:28764 (R;US)
Production research progress report, February 16–29, 1948, 20:30241 (R;US)
Shielding studies at Mound Laboratory, 20:29183 (R;US)

Monsanto Research Corp., Miamisburg, OH (United States). Mound
Growth of high T_c superconducting fibers using a miniaturized laser-heated float zone process. Final technical report, January 15, 1989–December 31, 1994, 20:30102 (R;US)
Ion effects in future circular and linear accelerators, 20:30435 (R;US)

Morrison-Knudsen Corp., San Francisco, CA (United States)
Remedial Action Plan and Site design for stabilization of the inactive Uranium Mill Tailings sites at Slick Rock, Colorado: Revision 1. Remedial action selection report, Attachment 2, geology report, Attachment 3, ground water hydrology report, Attachment 4, water resources protection strategy. Final, 20:29043 (R;US)
Uranium Mill Tailings Remedial Action Project (UMTRAP), Slick Rock, Colorado, Revision 1. Bid schedule, special conditions, specifications, and subcontract drawings, 20:29044 (R;US)
Uranium Mill Tailings Remedial Action Project (UMTRAP), Slick Rock, Colorado, Revision 1. Volume 1, Calculations, Final design for construction, 20:29047 (R;US)
Uranium Mill Tailings Remedial Action Project (UMTRAP), Slick Rock, Colorado, Revision 1. Volume 2, Calculations, Final design for construction, 20:29048 (R;US)
Uranium Mill Tailings Remedial Action Project (UMTRAP), Slick Rock, Colorado, Revision 1, Volume 3. Calculations, Final design for construction, 20:29049 (R;US)
Uranium Mill Tailings Remedial Action Project (UMTRAP), Slick Rock, Colorado, Revision 1, Volume 4. Calculations, Final design for construction, 20:29050 (R;US)

Mound Lab., Miamisburg, OH (United States)
A study of the quartz fiber balance No. II, 20:30207 (R;US)
Colorimetric determination of nickel in postum solutions, 20:30211 (R;US)
Comments on handling of radioactive substances, 20:30301 (R;US)
Density of metallic polonium, 20:30253 (R;US)
Electrodeposition progress report, September 1–30, 1948, 20:30057 (R;US)
Electrodeposition progress report, October 1–31, 1948, 20:30058 (R;US)
Electrodeposition research progress report, August 1–31, 1948, 20:29161 (R;US)
Electronics progress report, August 1–31, 1948, 20:29162 (R;US)
Electronics progress report, December 1–31, 1948, 20:29166 (R;US)
Gamma scale chemistry progress report, August 1–31, 1948, 20:30242 (R;US)
General chemistry progress report, May 1–31, 1948, 20:30255 (R;US)
Laboratory instrument design progress report, July 1–31, 1948, 20:30210 (R;US)
Laboratory instrument design progress report, October 1–31, 1948, 20:30614 (R;US)
Limitations and past applications of the cloud chamber, 20:30522 (R;US)
Neutron source progress report, August 1–31, 1948, 20:29177 (R;US)
Neutron source progress report, September 1–30, 1948, 20:29178 (R;US)
Neutron source progress report, October 1–31, 1948, 20:29164 (R;US)
Neutron source progress report, November 1–30, 1948, 20:29179 (R;US)
Physics group progress report, July 1–31, 1948, 20:30256 (R;US)
Physics group progress report, May 1–31, 1948, 20:30254 (R;US)
Preparation of bismuth powder, 20:30060 (R;US)
Preparation of bismuth powder, 20:30061 (R;US)
Production division progress report, May 1–31, 1948, 20:29176 (R;US)
Production Division progress report, September 1–30, 1948, 20:29163 (R;US)
Production electrolysis studies V, 20:30248 (R;US)
Quartz fiber research progress report. May 1–31, 1948, 20:30208 (R;US)
Shielded room measurements, Final report, 20:30302 (R;US)
Sonic decontamination, 20:28901 (R;US)
The identification of complex ions in solution by spectrophotometric measurements, 20:30206 (R;US)

Mound, Miamisburg, OH (United States)
A study of the Quartz Fiber Balance No. 1 (Information Report), 20:30563 (R;US)
Action description memorandum for the Facilities Capability Assurance Program (FCAP) FY 1992 FCAP Item: Steam and condensate system upgrades, 20:30304 (R;US)
Electrodeposition research progress report, 20:30610 (R;US)
Electronics progress report, 20:29165 (R;US)
Evaluation of coagulant aids at high pH, 20:28902 (R;US)
Gamma scale chemistry progress report, 20:30607 (R;US)
General chemistry progress report, 20:30609 (R;US)
General chemistry progress report, 20:30611 (R;US)
General chemistry progress report, 20:30613 (R;US)
Physics progress report, 20:30608 (R;US)
Process research progress report, 20:30612 (R;US)
Radioactive decontamination of metals by electropolishing, 20:30059 (R;US)

N

EIA directory of electronic products. Second quarter 1995, 20:29816 (R;US)

National Inst. for Fusion Science, Nagoya (Japan)
A new algorithm for differential-algebraic equations based on HIDM, 20:31363 (R;JP)
Proceedings of the symposium on negative ion sources and their applications, 20:30872 (R;JP;In Japanese, English)
Roles of atomic and molecular processes in fusion plasma researches. From the cradle (plasma production) to the grave (after-burning), 20:31188 (R;JP)

National Inst. of Radiological Sciences, Chiba (Japan)
Biological dosimetry by the radiation effects on the skin, 20:30830 (RA;JP;In Japanese)
Biological dosimetry in human hematopoietic cells, 20:30828 (RA;JP;In Japanese)
Dose estimation by chromosome analysis, 20:30829 (RA;JP;In Japanese)
Research subjects on internal dosimetry with emphasis on emergency, 20:30827 (RA;JP;In Japanese)

National Inst. of Standards and Technology (NEL), Boulder, CO (United States). Electromagnetic Technology Div.
Electromechanical properties of superconductors for DOE fusion applications, 20:31230 (R;US)

National Inst. of Standards and Technology, Gaithersburg, MD (United States)
Report of the Federal Internetworking Requirements Panel, 20:31315 (R;US)

National Inst. of Standards and Technology, Gaithersburg, MD (United States). Building and Fire Research Lab.
Lean flammability limit as a fundamental refrigerant property. Phase 1, Interim technical report, 1 October 1994–31 March 1995, 20:29902 (R;US)

National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan)
Nonlinear behavior of the bunch length in electron storage rings, 20:30492 (R;JP)

National Renewable Energy Lab., Golden, CO (United States)
3 MW to 6 MW Sawmill Energy Displacement Plants featuring, 20:29942 (RA;US)
A laboratory and pilot plant scaled continuous stirred reactor separator for the production of ethanol from sugars, corn grits/starch or biomass streams, 20:29266 (RA;US)
A new MBMS flame chamber for the study of molecular weight growth reactions, 20:30275 (RA;US)
A new system of harvesting biomass is born, 20:29235 (RA;US)
A premium price electricity market for the emerging biomass industry in the UK, 20:29329 (RA;US)
A study of sampling phenomena in a probe nozzle for high temperature MBMS, 20:30273 (RA;US)
A study of solid propellant combustion using a triple quadrupole mass spectrometer with microprobe sampling, 20:30265 (RA;US)
A summary of the University of Idaho conference commercialization of biodiesel–establishment of engine warranties, 20:29286 (RA;US)
Acute toxicity of biodiesel to freshwater and marine organisms, 20:29346 (RA;US)
Advanced biomass-to-energy conversion technologies for the pulp and paper industry, 20:29274 (RA;US)
Advanced liquid fuel production from biomass for power generation, 20:29234 (RA;US)
Agricultural fibres for pulp and paper manufacture in developed countries, 20:29369 (RA;US)
Agriculture: A source of raw materials for industrial purposes the French strategy, 20:29204 (RA;US)
Agro-energy: Redefining energy and agriculture in Iowa, 20:29240 (RA;US)
Air gasification of lignocellulosic biomass for power generation in Spain: Commercial plants, 20:29261 (RA;US)
Alternative fuel transit buses: Interim results from the National Renewable Energy Laboratory (NREL) Vehicle Evaluation Program, 20:29979 (R;US)
Alternative-fueled truck demonstration natural gas program: Caterpillar G3406LE development and demonstration, 20:29978 (R;US)
An alternative fuel for urban buses-biodiesel blends, 20:29304 (RA;US)
An assessment of northwest regions using the Utility Tracking System, 20:29335 (RA;US)
An assessment of the economic and employment impacts of the commercialization of renewable technologies in Washington/Oregon, 20:29884 (RA;US)
An evaluation of the performance of integrated bioenergy systems, 20:29238 (RA;US)
An overview of waste-to-energy systems in the U.S.A.: Waste as an energy source, 20:29957 (RA;US)
Anaerobic digestion of municipal, industrial, and livestock wastes for energy recovery and disposal, 20:29360 (RA;US)
Anaerobic digestion of municipal solid waste: Technical developments, 20:29964 (RA;US)
Analysis and test results for a two-bladed, passive cycle pitch, horizontal-axis wind turbine in free and controlled yaw, 20:29425 (R;US)
Animal and industrial waste anaerobic digestion: USA status report, 20:29361 (RA;US)
Animal manure digestion systems in central Europe, 20:29961 (RA;US)
Application of simultaneous thermogravimetric modulated beam mass spectrometry to the study of energetic materials, 20:30266 (RA;US)
Approaching the climate challenge: The experience of PacifiCorp, 20:30666 (RA;US)
Ash from the combustion of treated wood: Characteristics and management options, 20:29283 (RA;US)
Bavarian program for using renewable energies (biomass-network), 20:29279 (RA;US)
Bio-energy Recovery Systems for brewery wastewater management, 20:29943 (RA;US)
Bio-fuel oil combustion in a 0.5 MW furnace, 20:29289 (RA;US)
Biogas utilization, 20:29262 (RA;US)
Biomass electricity: Long-run economic prospects and climate policy implications, 20:29330 (RA;US)
Biomass energy opportunities on former sugarcane plantations in Hawaii, 20:29196 (RA;US)
Biomass fast pyrolysis, 20:29233 (RA;US)
Biomass gasification - A way to achieve competitive electricity production in the UK, 20:29441 (RA;US)
Biomass in clean coal production, 20:29272 (RA;US)
Biomass in the Netherlands, 20:29277 (RA;US)
Biomass losses during harvest and storage of switchgrass, 20:29342 (RA;US)
Biomass resources for electric generation in the Pacific Northwest, 20:29195 (RA;US)
Biomass "Toolkit": A new modelling approach for the evaluation of feasibility and sustainability of bioenergy schemes, 20:29273 (RA;US)
Biomass-derived oxygenates for transportation fuels, 20:29265 (RA;US)
Biomass-energy potential and CO_2 mitigation in Slovak Republic, 20:29349 (RA;US)
Biosynthesis of indigo using recombinant E. coli: Development of a biological system for the cost-effective production of a large volume chemical, 20:29364 (RA;US)
Carbohydrate biofuel I: Rootfuel studies in Mexico, Brazil, Zimbabwe and India, 20:29224 (RA;US)
Carbohydrate biofuels II: The need and the potential for rootfuel in the Navajo Nation, 20:29314 (RA;US)
Carbohydrate biofuels III: Consumptive-use and root yield of buffalo gourd, 20:29225 (RA;US)
Cell and tissue culture of Miscanthus Sacchariflorus, 20:29227 (RA;US)
Cells on foam and fiber, 20:29231 (RA;US)
Characteristics of a fast pyrolysis bio-fuel and its miscibility with oxygenated and conventional fuels, 20:29288 (RA;US)
Characterization of wood ash and its regulations for land applications in Great Lakes region, 20:29353 (RA;US)
Chemical composition of biomass from tall perennial tropical grasses, 20:29220 (RA;US)
Chemistry and kinetics of chlorine oxides under stratospheric conditions, 20:30667 (RA;US)
Circulating fluidized bed tehnology in biomass combustion-performance, advances and experiences, 20:29293 (RA;US)
Closed loop biomass in Puerto Rico, 20:29241 (RA;US)
Cofiring waste biofuels and coal for emissions reduction, 20:29439 (RA;US)
Cofiring wood waste and coal in cyclone boilers: Test results and prospectus, 20:29438 (RA;US)
Commercial operating experience with the Valorga process in the municipal solid waste treatment field, 20:29960 (RA;US)
Commercialization of biomass ethanol: Plant siting studies, 20:29334 (RA;US)
Commercialization of willow bioenergy - a dedicated feedstock supply system, 20:29336 (RA;US)
Comparative evaluation of fuel costs from energy crops, 20:29320 (RA;US)
Comparison of on-line MS techniques for complex reactive systems, 20:30217 (RA;US)
Composition distortion in MBMS sampling, 20:30214 (RA;US)
Compositional variability in herbaceous energy crops, 20:29219 (RA;US)

Constructive features, operation and sizing of fluidized bed gasifiers for biomass, 20:29259 (RA;US)
Continuous diesel emissions speciation with a transportable MBMS system, 20:29969 (RA;US)
Continuous ethanol production in biofilm reactors containing plastic composite rings and discs, 20:29267 (RA;US)
Control of the structure and properties of a frost-resistant fiber-cement building plate on the basis of waste cellulose fibers, 20:29372 (RA;US)
Conversion of lignin into a precursor for the production of graphitic carbon materials, 20:29367 (RA;US)
Conversion of vegetable oils and animal fats into paraffinic cetane enhancers for diesel fuels, 20:29305 (RA;US)
Copolymer resins made of agricultural and forest residues extracts for wood laminating adhesives, 20:29370 (RA;US)
Cost versus scale for advanced plantation-based biomass energy systems in the U.S.A. and Brazil, 20:29319 (RA;US)
Creating a biopower agenda through grassroots organizing, 20:29316 (RA;US)
Cummins 5.9L biodiesel fueled engines, 20:29303 (RA;US)
Demonstration and commercial production of biomass for energy, 20:29206 (RA;US)
Densified fuels from wood waste, 20:29309 (RA;US)
Determination of mass and velocity distributions of soot particles in a nozzle beam from a flame by means of a Wien filter, 20:30267 (RA;US)
Determination of the potential market size and opportunities for biomass-to-electricity projects in China, 20:29210 (RA;US)
Development and commercialization of a biomass gasification/power generation system, 20:29254 (RA;US)
Development of a new generation of small scale biomass-fueled electric generating power plants, 20:29440 (RA;US)
Development of a system for long hauling chaff to an ethanol facility, 20:29340 (RA;US)
Development of end-market uses for sludge derived oils, 20:29287 (RA;US)
Development of gas turbine combustor fed with bio-fuel oil, 20:29292 (RA;US)
Development of the Cuban bagasse boiler practice, 20:29310 (RA;US)
Direct sampling of inorganic vapors released during biomass combustion, 20:29311 (RA;US)
Drying and burning wood waste using pulse combustion, 20:29356 (RA;US)
Dynamic stall occurrence on a horizontal axis wind turbine blade, 20:29424 (R;US)
Ecology of agricultural monocultures: Some consequences for biodiversity in biomass energy farms, 20:29242 (RA;US)
Economic development through biomass systems integration in central Florida, 20:29276 (RA;US)
Economic viability of anaerobic digestion, 20:29362 (RA;US)
Electric and magnetic fields program overview, 20:30842 (R;US)
Electron impact, hyperthermal surface ionization and fast GC-MS in supersonic molecular beams, 20:30216 (RA;US)
Emissions and engine performance from blends of soya and canola methyl esters with ARB No. 2 diesel in a DDC 6V92TA MUI engine, 20:29302 (RA;US)
Energy recovery from biosolids: The City of Los Angeles experience, 20:29959 (RA;US)
Energy, economic, and environmental implications of production of grasses as biomass feedstocks, 20:29221 (RA;US)
Energy-saving tips for small businesses, 20:29904 (R;US)
Environmental impacts of anaerobic digestion and the use of anaerobic residues as soil amendment, 20:29345 (RA;US)
Estimating the net energy value of corn-ethanol, 20:29230 (RA;US)
Evaluating the economic costs, benefits and tradeoffs of dedicated biomass energy systems: The importance of scale, 20:29331 (RA;US)
Evaluation of switchgrass as a sustainable bioenergy crop in Texas, 20:29217 (RA;US)
Expanding biomass power in a tough utility arena using diversified portfolio strategies, 20:29338 (RA;US)
Fast pyrolysis of pretreated wood, 20:29271 (RA;US)
Flame structure studies of neat and NH_3 doped H_2/N_2O flames employing molecular beam mass spectrometry and modeling, 20:30263 (RA;US)
Forest management issues affecting biomass resources: A forest service perspective, 20:29203 (RA;US)
Free jet sampling - a motley mix of methods and applications, 20:30212 (RA;US)
Free-jet mass spectrometry of laser ablation plumes in thin film deposition, 20:30307 (RA;US)
Gas cleanup for combined cycle power generation using a hot gas conditioning catalyst, 20:29257 (RA;US)
Gasification of biomass wastes and residues for electricity production in the Netherlands, 20:29359 (RA;US)
Greenhouse gas emissions from biomass burning, 20:29347 (RA;US)
Guidelines for obtaining favorable project financing, federal tax incentives, and various state incentives to fund biomass energy development, 20:29323 (RA;US)
Harvesting cotton stalks for use as a biomass feedstock, 20:29211 (RA;US)
Higher heating values for pellets made from short rotation biomass of hardwood species, 20:29216 (RA;US)
Hydrogen from biomass: A fresh approach, 20:29260 (RA;US)
Hydrogenated soy ethyl ester (HySEE) from ethanol and waste vegetable oil, 20:29263 (RA;US)
In the aftermath of PURPA: The future of the biomass energy industry in Maine, 20:29321 (RA;US)
Introduction of Miscanthus SSP. in Russia, 20:29226 (RA;US)
Introduction of the first commercial MASSAHAKE-Plant, 20:29229 (RA;US)
Is there a need for site productivity functions for short-rotation woody crop plantings?, 20:29212 (RA;US)
Large-scale biomass plantings in Minnesota: Scale-up and demonstrating projects in perspective, 20:29208 (RA;US)
Low-emission vortex combustion of biomass and fossil fuel, 20:29296 (RA;US)
Market projections and factors influencing the development of new products and energy derived from agricultural crops in the European Union, 20:29243 (RA;US)
Mass discrimination effects in MBMS study of rich premixed flames, 20:30270 (RA;US)
Mass specrometry as an efficient tool for kinetic studies in flames, 20:30261 (RA;US)
Mass spectrometer sampling of supercritical water-oxidation reactions, 20:30219 (RA;US)
MBMS and gas phase chromatography studies of n-heptane and iso-octane flames, 20:30258 (RA;US)
MBMS of biomass pyrolysis vapors and catalytic upgrading, 20:29280 (RA;US)
MBMS sampling from highly heated gas mixtures (1000-3000 K) and weakly ionized RF plasmas (800-2800 K) or laser plasmas (5000-20,000 K), 20:30215 (RA;US)
MBMS studies of gas-phase kinetics in diamond chemical vapor deposition, 20:30220 (RA;US)
Mechanical properties and potential commercial applications of agricultural composites, 20:29373 (RA;US)
Metabolic engineering and applications of polyhydroxyalkanoates (PHAs), 20:29365 (RA;US)
Microstructure of amorphous-silicon-based solar cell materials by small-angle x-ray scattering. Annual subcontract report, 6 April 1994–5 April 1995, 20:29394 (R;US)
Modular plants producing fuels for biomass cogeneration plants, 20:29252 (RA;US)
Molecular beam mass spectrometry applied to biomass gasification monitoring, 20:29281 (RA;US)
Molecular beam mass spectrometry studies of the thermal decomposition of tetraethoxysilane (TEOS), 20:30269 (RA;US)
Molecular beam mass-spectrometric study of H_2/O_2/Ar flame doped with phosphorus compounds, 20:30259 (RA;US)
Molecular beam, mass spectrometric sampling in hazardous waste destruction, 20:30272 (RA;US)
Molecular beam/mass spectrometric and modeling studies of CF_3Br inhibited flames, 20:30264 (RA;US)

MTCI/Thermochem stream reforming process for biomass, 20:29253 (RA;US)
Nitrate losses from fertilised short rotation willow - a preliminary evaluation of two years data, 20:29214 (RA;US)
Obtaining kinetics from MBMS and modeling of propene flame structure, 20:30262 (RA;US)
On-road testing of rapeseed biodiesel, 20:29308 (RA;US)
One-phase methods for accelerating the production of biodiesel methyl esters, 20:29264 (RA;US)
Operation of a direct-fired combustion turbine system on pulverized wood, 20:29355 (RA;US)
Options for thermochemical processing of biomass, 20:29256 (RA;US)
Organic waste recycling to short rotation wood crops, 20:29354 (RA;US)
Particle beam mass spectrometry of submicron particles sampled from low-pressure environments, 20:30306 (RA;US)
Perspectives for energy processing of waste biomass in Bulgaria, 20:29202 (RA;US)
Phenol-formaldehyde resin substitutes from biomass tars, 20:29366 (RA;US)
Pilot Plant results with Inclined Fluidized Bed technology, 20:29294 (RA;US)
Plant variability and bio-fuel properties, 20:29270 (RA;US)
Possibilities for increasing the power generation with biomass in pulp and paper mills, 20:29357 (RA;US)
Potential for electricity generation from biomass residues in Cuba, 20:29205 (RA;US)
Potential production of hydrocarbons from the conversion of a wood-derived oil over some aluminophosphate catalysts, 20:29269 (RA;US)
Power production based on biofuels, 20:29300 (RA;US)
Principles of free jets, 20:30213 (RA;US)
Priorities for ecological research of energy crops in the North Central states, 20:29228 (RA;US)
Private funding of a biomass power project: Williams Lake case history, 20:29324 (RA;US)
Processing and utilizing urban wood waste and pallets for fuel, 20:29250 (RA;US)
Producing biodiesel for the "truck in the park" project, 20:29306 (RA;US)
Productivity of poplar grown on short rotation in Spain: Influence of the rotation age and plant density, 20:29215 (RA;US)
Progress in amorphous silicon PV technology: An update, 20:29395 (R;US)
Quantitative measurement of radical intermediates by molecular-beam-sampling-mass-spectrometry, 20:30274 (RA;US)
Quantitative sampling with free-jet, molecular beam mass spectrometry, 20:29282 (RA;US)
Rapid characterization of lignocellulosic feedstocks for fuels and chemicals: Molecular beam mass spectrometric approach, 20:29312 (RA;US)
Rapid pyrolysis of agricultural residues at high temperatures, 20:29258 (RA;US)
Recent developments in annual growth lignocellulosics as reinforcing fillers in thermoplastics, 20:29368 (RA;US)
Recent progress in biodiesel production and testing at the University of Idaho, 20:29307 (RA;US)
Recent utility efforts to develop advanced gasification biomass power generation facilities, 20:29317 (RA;US)
Recycling of treated wood poles, 20:29268 (RA;US)
Removal of inorganic elements to improve biomass combustion properties, 20:29297 (RA;US)
Resource mapping and analysis of UK farm livestock manures: Assessing the opportunities for biomass-to-energy technologies, 20:29199 (RA;US)
Resource potential of wood-based wastes in the United States, 20:29198 (RA;US)
Response of 'Alamo' switchgrass (Panicum virgatum) to weed management practices, 20:29222 (RA;US)
Responses of Alabama farmers to a survey on growing switchgrass for energy, 20:29236 (RA;US)
Results of the Finnish bioenergy research programme, 20:29278 (RA;US)
Rural energy development initiative, 20:29315 (RA;US)
Sewage sludge gasification: First studies, 20:29958 (RA;US)
Short rotation willow coppice in Wales: High production under adverse environmental conditions?, 20:29209 (RA;US)
Strategies for reducing carbon emissions on the tropical rain forest: The case of the Brazilian Amazon, 20:29348 (RA;US)
Strategies for the development of biomass in industrialized countries, 20:29327 (RA;US)
Studies of volatile high temperature corrosion products via the free-jet MBMS technique, 20:30268 (RA;US)
Study of solid propellant flame structure by mass-spectrometric sampling, including MBMS, 20:30271 (RA;US)
Successful strategies for bioenergy commercialization: The New York state model, 20:29275 (RA;US)
Sunspuds™: A new sugar crop for producing ethanol fuel, 20:29232 (RA;US)
Sustainable biomass energy production and rural economic development using alfalfa as feedstock, 20:29239 (RA;US)
Sustainable biomass utilization, 20:29332 (RA;US)
Switchgrass as a biofuels feedstock for the upper Southeast, 20:29223 (RA;US)
Tax issues and incentives for biomass products, 20:29326 (RA;US)
Technologies for delivering forest biomass: Challenges and implications, 20:29197 (RA;US)

3-D flow analyses for design of nuclear fuel spacer, 20:29476 (RA;US)
A comparison of critical heat flux in tubes and bilaterally heated annuli, 20:29506 (RA;US)
A comparison of the CHF between tubes and annuli under PWR thermal-hydraulic conditions, 20:29473 (RA;US)
A comparison of the effect of the first and second upwind schemes on the predictions of the modified RELAP5/MOD3, 20:29726 (RA;US)
A concept of JAERI passive safety light water reactor system (JPSR), 20:29675 (RA;US)
A criterion for the onset of slugging in horizontal stratified air-water countercurrent flow, 20:29613 (RA;US)
A formal approach for the prediction of the critical heat flux in subcooled water, 20:31233 (RA;US)
A general unified non-equilibrium model for predicting saturated and subcooled critical two-phase flow rates through short and long tubes, 20:29621 (RA;US)
A mechanistic determination of horizontal flow regime bound using void wave celerity, 20:29612 (RA;US)
A model for the performance of a vertical tube condenser in the presence of noncondensable gases, 20:29628 (RA;US)
A model of film boiling in the presence of electric fields, 20:29514 (RA;US)
A practical view of the insights from scaling thermal-hydraulic tests, 20:29681 (RA;US)
A simple delay model for two-phase flow dynamics, 20:29515 (RA;US)
A simple modelling of mass diffusion effects on condensation with noncondensable gases for the CATHARE Code, 20:29738 (RA;US)
A study of the dispersed flow interfacial heat transfer model of RELAP5/MOD2.5 and RELAP5/MOD3, 20:29730 (RA;US)
A study of the effect of space-dependent neutronics on stochastically-induced bifurcations in BWR dynamics, 20:29753 (RA;US)
A thermal-hydraulic code for transient analysis in a channel with a rod bundle, 20:29673 (RA;US)
About the statistical description of gas-liquid flows, 20:29619 (RA;US)

Aerodynamics, heat and mass transfer in steam-aerosol turbulent flows in containment, 20:29699 (RA;US)
An assessment of RELAP5 MOD3.1.1 condensation heat transfer modeling with GIRAFFE heat transfer tests, 20:29736 (RA;US)
An experimental investigation of the post-CHF enhancement factor for a prototypical ITER divertor plate with water coolant, 20:31231 (RA;US)
An interpretation of passive containment cooling phenomena, 20:29694 (RA;US)
An investigation of condensation from steam-gas mixtures flowing downward inside a vertical tube, 20:29624 (RA;US)
An investigation of transition boiling mechanisms of subcooled water under forced convective conditions, 20:29472 (RA;US)
Analysis of a small break loss-of-coolant accident of pressurized water reactor by APROS, 20:29740 (RA;US)
Analysis of an AP600 intermediate-size loss-of-coolant accident, 20:29674 (RA;US)
Analysis of overflow-induced sloshing in an elestic-wall vessel using physical component BFC method, 20:29682 (RA;US)
Analysis of steam generator loss-of-feedwater experiments with APROS and RELAP5/MOD3.1 computer codes, 20:29758 (RA;US)
Analysis of supercritical vapor explosions using thermal detonation wave theory, 20:29703 (RA;US)
Analysis of the return to power scenario following a LBLOCA in a PWR, 20:29754 (RA;US)
Analysis of two-phase flow inter-subchannel mass and momentum exchanges by the two-fluid model approach, 20:29462 (RA;US)
Analytical solution of laminar-laminar stratified two-phase flows with curved interfaces, 20:29617 (RA;US)
AP600 design certification thermal hydraulics testing and analysis, 20:29611 (RA;US)
Application of an analytical method for solution of thermal hydraulic conservation equations, 20:29723 (RA;US)
Application of UPTF data for modeling liquid draindown in the downcomer region of a PWR using RELAP5/MOD2-B&W, 20:29667 (RA;US)
Assessment of computer codes for VVER-440/213-type nuclear power plants, 20:29731 (RA;US)
Assessment of the advantages of a residual heat removal system inside the reactor pressure vessel, 20:29676 (RA;US)
ASTRID: A 3D Eulerian software for subcooled boiling modelling - comparison with experimental results in tubes and annuli, 20:29647 (RA;US)
ATHLET validation using accident management experiments, 20:29737 (RA;US)
Boiling characteristics of dilute polymer solutions and implications for the suppression of vapor explosions, 20:29706 (RA;US)
Bubble behaviour and mean diameter in subcooled flow boiling, 20:30342 (RA;US)
Buoyancy-driven flow excursions in fuel assemblies, 20:29636 (RA;US)
CATHARE2 calculation of SPE-3 test small break loca on PMK facility, 20:29733 (RA;US)
CCFL in hot legs and steam generators and its prediction with the CATHARE code, 20:29652 (RA;US)
CFD prediction of flow and phase distribution in fuel assemblies with spacers, 20:29643 (RA;US)
Characteristics of turbulent velocity and temperature in a wall channel of a heated rod bundle, 20:29640 (RA;US)
Characterization of non equilibrium effects on high quality critical flows, 20:29504 (RA;US)
CHF considerations for highly moderated 100% MOX fuels PWRs, 20:29474 (RA;US)
Code package "SVECHA": Modeling of core degradation phenomena at severe accidents, 20:29720 (RA;US)
Cold source vessel development for the advanced neutron source, 20:29571 (RA;US)
Computational fluid dynamic analysis of a closure head penetration in a pressurized water reactor, 20:29644 (RA;US)
Computational modeling for hexcan failure under core distruptive accidental conditions, 20:29689 (RA;US)
Condensation during gravity driven ECC: Experiments with PACTEL, 20:29623 (RA;US)
Condensation heat transfer coefficient with noncondensible gases for heat transfer in thermal hydraulic codes, 20:29630 (RA;US)
Condensation in the presence of noncondensible gases: AP600 containment simulation, 20:29697 (RA;US)
Conjugate heat transfer analysis of multiple enclosures in prototype fast breeder reactor, 20:29688 (RA;US)
Containment atmosphere response to external sprays, 20:29691 (RA;US)
Correlation of critical heat flux data for uniform tubes, 20:29513 (RA;US)
Correlations between the disintegration of melt and the measured impulses in steam explosions, 20:29702 (RA;US)
Counter-current flow in a vertical to horizontal tube with obstructions, 20:29650 (RA;US)
Coupled calculation of the radiological release and the thermal-hydraulic behavior of a 3-loop PWR after a SGTR by means of the code RELAP5, 20:29755 (RA;US)
Cross-sectional void fraction distribution measurements in a vertical annulus two-phase flow by high speed X-ray computed tomography and real-time neutron radiography techniques, 20:29638 (RA;US)
Crust formation and its effect on the molten pool coolability, 20:29717 (RA;US)
Density wave oscillations of a boiling natural circulation loop induced by flashing, 20:29660 (RA;US)
Detailed thermal-hydraulic computation into a containment building, 20:29695 (RA;US)
Development and assessment of a modified version of RELAP5/MOD3, 20:29729 (RA;US)
Development of a graphical user interface for the TRAC plant/safety analysis code, 20:29725 (RA;US)
Development, implementation and assessment of specific, two-fluid closure laws for inverted-annular film-boiling, 20:29616 (RA;US)
Drift flux model as approximation of two fluid model for two phase dispersed and slug flow in tube, 20:29615 (RA;US)
Dynamics of shock wave propagation and interphase process in liquid-vapor medium, 20:29665 (RA;US)
Effect of subcooling and wall thickness on pool boiling from downward-facing curved surfaces in water, 20:29626 (RA;US)
Entropy analysis on non-equilibrium two-phase flow models, 20:29620 (RA;US)
Evaluation and assessment of reflooding models in RELAP5/Mod2.5 and RELAP5/Mod3 codes using Lehigh University and PSI-Neptun bundle experimental data, 20:29741 (RA;US)
Evaluation of a main steam line break with induced, multiple tube ruptures: A comparison of NUREG 1477 (Draft) and transient methodologies Palo Verde Nuclear Generating Station, 20:29666 (RA;US)
Evaluation of wrapper tube temperatures of fast neutron reactors using the TRANSCOEUR-2 code, 20:29686 (RA;US)
Experience using individually supplied heater rods in critical power testing of advanced BWR fuel, 20:29460 (RA;US)
Experimental assessment of computer codes used for safety analysis of integral reactors, 20:29746 (RA;US)
Experimental investigation of 150-KG-scale corium melt jet quenching in water, 20:29707 (RA;US)
Experimental simulation of the water cooling of corium spread over the floor of a BWR containment, 20:29721 (RA;US)
Experimental studies of thermal and chemical interactions between oxide and silicide nuclear fuels with water, 20:29709 (RA;US)
Experimental studies of thermal and chemical interactions between molten aluminum and water, 20:29712 (RA;US)
Experimental study of horizontal annular channels under non-developed conditions, 20:29631 (RA;US)
FARO base case post-test analysis by COMETA code, 20:29735 (RA;US)
FCI experiments in the corium/water system, 20:29708 (RA;US)
FIBWR2 evaluation of fuel thermal limits during density wave oscillaions in BWRs, 20:29659 (RA;US)
Flooding characteristics of gas-liquid two-phase flow in a horizontal U bend pipe, 20:29651 (RA;US)
Flooding of a large, passive, pressure-tube LWR, 20:29678 (RA;US)
Flow characteristics of Korea multi-purpose research reactor, 20:29569 (RA;US)

Free convective condensation in a vertical enclosure, 20:29696 (RA;US)
Further evaluation of the CSNI separate effect test activity, 20:29764 (RA;US)
General correlation for prediction of critical heat flux ratio in water cooled channels, 20:29507 (RA;US)
GEYSER/TONUS: A coupled multi-D lumped parameter code for reactor thermal hydraulics analysis in case of severe accidents, 20:29700 (RA;US)

The low-power low-pressure flow resonance in a natural circulation cooled boiling water reactor, 20:29463 (RA;US)
The mixing of particle clouds plunging into water, 20:29711 (RA;US)
The modeling of core melting and in-vessel corium relocation in the APRIL code, 20:29719 (RA;US)
The modelling of wall condensation with noncondensable gases for the containment codes, 20:29693 (RA;US)
The multi-dimensional module of CATHARE 2 description and application, 20:29648 (RA;US)
The numerical methods for the development of the mixture region in the vapor explosion simulations, 20:29704 (RA;US)
The Phebus FP thermal-hydraulic analysis with Melcor, 20:29767 (RA;US)
The role of heater thermal response in reactor thermal limits during oscillartory two-phase flows, 20:29505 (RA;US)
The sensitivity analysis by adjoint method for the uncertainty evaluation of the CATHARE-2 code, 20:29728 (RA;US)
The sudden coalescene model of the boiling crisis, 20:29470 (RA;US)
The use of waveguide acoustic probes for void fraction measurement in the evaporator of BN-350-Type reactor, 20:29635 (RA;US)
THEHYCO-3DT: Thermal hydrodynamic code for the 3 dimensional transient calculation of advanced LMFBR core, 20:29645 (RA;US)
Thermal-hydraulic behaviors of vapor-liquid interface due to arrival of a pressure wave, 20:29705 (RA;US)
Thermal-hydraulic instabilities in pressure tube graphite - moderated boiling water reactors, 20:29664 (RA;US)
Thermal-hydraulics of wave propagation and pressure distribution under hypothetical steam explosion conditions in the ANS reactor, 20:29768 (RA;US)
Transient pool boiling heat transfer due to increasing heat inputs in subcooled water at high pressures, 20:29637 (RA;US)
Transition to chaos in a square enclosure containing internal heat sources, 20:29646 (RA;US)
Turbulence prediction in two-dimensional bundle flows using large eddy simulation, 20:29511 (RA;US)
Turbulent mixed convection in vertical and inclined flat channels with aiding flows, 20:29510 (RA;US)
Turning points in reactor design, 20:29609 (RA;US)
Two-phase flow instabilities in a vertical annular channel, 20:29661 (RA;US)
Two-phase flow stability structure in a natural circulation system, 20:29658 (RA;US)
Two-phase velocity measurements around cylinders using particle image velocimetry, 20:29639 (RA;US)
UPTF-TRAM experiments for SBLOCA: Evaluation of condensation processes in TRAM tests A6 and A7, 20:29629 (RA;US)
Validation of advanced NSSS simulator model for loss-of-coolant accidents, 20:29748 (RA;US)
Validation of the THIRMAL-1 melt-water interaction code, 20:29745 (RA;US)
Velocity of large bubble in liquid-solid mixture in a vertical tube, 20:29618 (RA;US)
VIPRE modeling of VVER-1000 reactor core for DNB analyses, 20:29732 (RA;US)
Void fraction distribution in a heated rod bundle under flow stagnation conditions, 20:29756 (RA;US)
Water hammer phenomena occurring in nuclear power installations while filling horizontal pipe containing saturated steam with liquid, 20:29509 (RA;US)

Nuclear Regulatory Commission, Washington, DC (United States). Office for Analysis and Evaluation of Operational Data
Report to Congress on abnormal occurrences, October–December 1994. Volume 17, No. 4, 20:29592 (R;US)

Clean coal technology project to Polk Power Station, Tampa Electric Company, Florida, Volume 1: Report, 20:28658 (R;US)
Clean coal technology project to Polk Power Station, Tampa Electric Company, Florida. Final report, Volume II: Report and appendices, 20:28659 (R;US)
Knowledge and abilities catalog for nuclear power plant operators: Boiling water reactors, Revision 1, 20:29459 (R;US)

Nuclear Regulatory Commission, Washington, DC (United States). Office of Nuclear Regulatory Research
Environmentally assisted cracking in light water reactors. Semiannual report, April 1994–September 1994, Volume 19, 20:29516 (R;US)
Transactions of the twenty-third water reactor safety information meeting to be held at Bethesda Marriott Hotel, Bethesda, Maryland, October 23–25, 1995, 20:29771 (R;US)
Using micro saint to predict performance in a nuclear power plant control room, 20:29527 (R;US)

Nuclear Regulatory Commission, Washington, DC (United States). Office of the General Counsel
Nuclear Regulatory legislation: 103d Congress. Volume 1, No. 3, 20:29872 (R;US)
Nuclear Regulatory legislation: 103d Congress. Volume 2, No. 3, 20:29873 (R;US)

NumerEx, Albuquerque, NM (United States)
A dynamic explosive model for MACH2 with applications to magnetic flux compression generators, 20:30583 (R;US)

O

O'Brien and Gere Engineers, Inc., Syracuse, NY (United States)
Pilot-scale treatability testing – Recycle, reuse, and disposal of materials from decontamination and decommissioning activities: Soda blasting demonstration, 20:29075 (R;US)

Oak Ridge Inst. for Science and Education, TN (United States)
Neutron quality factor, 20:30831 (R;US)

Oak Ridge K-25 Site, TN (United States)
A spreadsheet-coupled SOLGAS: A computerized thermodynamic equilibrium calculation tool. Revision 1, 20:30236 (R;US)
New flow boiling heat transfer correlation for CFC-114 and C_4F_{10}, 20:29906 (R;US)
Pilot-scale treatability testing – Recycle, reuse, and disposal of materials from decontamination and decommissioning activities: Soda blasting demonstration, 20:29075 (R;US)
Pollution prevention opportunity assessment for the K-25 Site Toxic Substances Control Act Incinerator Operations, Level III, 20:28859 (R;US)

Oak Ridge National Lab., TN (United States)
1995 Area 1 bird survey/Zone 1, Operable Unit 2, Robins Air Force Base, Georgia, 20:30743 (R;US)
2-D image segmentation using minimum spanning trees, 20:31367 (R;US)
A Landau fluid model for dissipative trapped electron modes, 20:31190 (R;US)

A liquid over-feeding military air conditioner, 20:30569 (R;US)
A multilevel voltage-source inverter with separate dc sources for static var generation, 20:29784 (R;US)
A new method for measuring the dynamic surface tension of complex-mixture liquid drops, 20:30230 (R;US)
A novel carbon fiber based porous carbon monolith, 20:30155 (R;US)
A novel carbon fiber based porous carbon monolith, 20:30175 (RA;US)
Addendum to the health and safety plan for Waste Area Grouping 6 at Oak Ridge National Laboratory, Oak Ridge, Tennessee. Environmental Restoration Program, 20:28908 (R;US)
Advanced bioreactor systems for gaseous substrates: Conversion of synthesis gas to liquid fuels and removal of SO_x and NO_x from coal combustion gases, 20:28632 (RA;US)
Advanced methods for processing ceramics, 20:30127 (RA;US)
Advanced microwave processing concepts, 20:30181 (RA;US)
Advanced SiC composites for fusion applications, 20:30156 (RA;US)
Aerogel nanocomposite materials, 20:30176 (RA;US)
Aging management of containment structures in nuclear power plants, 20:29579 (R;US)
An analytical method of predicting Lee-Kesler-Ploecker binary interaction coefficients: Part 1, For non-polar hydrocarbon mixtures, 20:30876 (R;US)
An investigation of the desorption of hydrogen from lithium oxide using temperature programmed desorption and diffuse reflectance infrared spectroscopy, 20:31210 (RA;US)
An ORNL office building used as a federal test bed for energy efficient roofs, 20:29901 (R;US)
Analysis of the surface structure of HFCVD diamond films, 20:29996 (R;US)
Anticipatory precrash restraint sensor feasibility study: Final report, 20:29922 (R;US)
Apparent activation energy of subcritical crack growth of SiC/SiC composites at elevated temperatures, 20:30159 (RA;US)
Artificial magma program: Report on workshop held in Oak Ridge, Tennessee on March 29-30, 1994, 20:28918 (R;US)
Biomimetic thin film synthesis, 20:30182 (RA;US)
Calendar Year 1994 Groundwater Quality Report for the Bear Creek Hydrogeologic Regime Y-12 Plant, Oak Ridge, Tennessee, 20:29125 (R;US)
Carbon dioxide, hydrographic, and chemical data obtained during the R/V Meteor cruise 15/3 in the South Atlantic Ocean. WOCE Section A9, February–March 1991, 20:30772 (R;US)
Carbon formation and metal dusting in hot-gas cleanup systems of coal gasifiers, 20:28630 (RA;US)
Cation disorder in high-dose, neutron-irradiated spinel, 20:30099 (RA;US)
Centers for manufacturing technology: Industrial Advisory Committee Review, 20:30331 (R;US)
Central solar heating plants with seasonal storage, 20:29402 (RA;US)
Ceramic technology report. Semi-annual progress report, April 1994–September 1994, 20:30125 (R;US)
Characterization of CVI densification of ceramic composites, 20:30128 (RA;US)
Characterization of three-way automotive catalysts, 20:30129 (RA;US)
Characterizing and modeling combustion of mild-gasification chars in pressurized fluidized beds, 20:28667 (R;US)
Chemical and Analytical Sciences Division progress report for the period January 1, 1993–December 31, 1994, 20:29853 (R;US)
Chemical and mechanical interactions of interstitials in V-5%Cr-5%Ti, 20:30010 (RA;US)
Chemical compatibility of structural materials in alkali metals, 20:30023 (RA;US)
Chemical recycling of mixed waste plastics by selective pyrolysis, 20:29945 (RA;US)
Chemical vapor infiltration of TiB_2 composites, 20:30130 (RA;US)
Cometabolic bioreactor demonstration at the Oak Ridge K-25 Site: Final report, 20:29102 (R;US)
Commissioning of the long-pulse fast wave current drive antennas for DIII-D, 20:31207 (R;US)
Comparison of defect cluster accumulation and pattern formation in irradiated copper and nickel, 20:30005 (RA;US)
Comparison of properties of sintered and sintered reaction-bonded silicon nitride fabricated by microwave and conventional heating, 20:30106 (R;US)
Complex-compound low-temperature TES system, 20:29804 (RA;US)
Composites and blends from biobased materials, 20:30177 (RA;US)
Computer and graphics modeling of heat transfer and phase change in a wall with randomly imbibed PCM, 20:29897 (RA;US)
Conducting polymers: Synthesis and industrial applications, 20:30178 (RA;US)
Correlation between shear punch and tensile data for neutron-irradiated aluminum alloys, 20:30004 (RA;US)
Cr_2Nb-based alloy development, 20:30062 (RA;US)
Data acquisition system used in radiation induced electrical degradation experiments, 20:30098 (RA;US)
Dependence of mode I and mixed mode I/III fracture toughness on temperature for a ferritic/martensitic stainless steel, 20:30007 (RA;US)
Depeted uranium market study. Final report, 20:28786 (R;US)
Design and fabrication of a prototype sensor system for waste storage tank characterization. CRADA final report for CRADA Number ORNL92-0094, 20:28821 (R;US)
Determination of operating limits for radionuclides for a proposed landfill at Paducah Gaseous Diffusion Plant, 20:28805 (R;US)
Development of a direct contact ice storage system, 20:29800 (RA;US)
Development of a modular integrated control architecture for flexible manipulators. Final report, 20:31316 (R;US)
Development of iron aluminides, 20:30063 (RA;US)
Development of microwave processing of silicon nitride components for advanced heat engine applications – Microwave annealing of silicon nitride with high additive contents. CRADA final report for CRADA Number ORNL90-0035, 20:30124 (R;US)
Development of microwave-heated diesel particulate filters, 20:29970 (RA;US)
Development of oxidation/corrosion-resistant composite materials and interfaces, 20:30123 (RA;US)
Development of PCM wallboard for heating and cooling of residential buildings, 20:29896 (RA;US)
Development of separation techniques for a direct contact thermal energy storage system, 20:29799 (RA;US)
Development of weldable, corrosion-resistant iron-aluminide alloys, 20:30070 (RA;US)
Differentiation of Aroclors in environmental samples using linear discrimination, 20:30694 (R;US)
DIII-D Research Operations annual report to the US Department of Energy, October 1, 1993–September 30, 1994, 20:31212 (R;US)
Dislocation development in V-5CR-5TI and pure vanadium, 20:30013 (RA;US)
Disposal of chemical agents and munitions stored at Pueblo Depot Activity, Colorado. Final, Phase 1: Environmental report, 20:30741 (R;US)
DOE spent nuclear fuel – Nuclear criticality safety challenges and safeguards initiatives, 20:30282 (R;US)
Dosimetric methodology of the ICRP, 20:30820 (R;US)
Ductile-brittle transition behavior of V-4Cr-4Ti irradiated in the dynamic helium charging experiment, 20:30020 (RA;US)
Dynamic response of the high flux isotope reactor structure caused by nearby heavy load drop, 20:29580 (R;US)
Effect of dopants on crystal structure and thermal properties of pentaglycerine, 20:29798 (RA;US)
Effect of dynamically charged helium on tensile properties of V-4Cr-4Ti, 20:30019 (RA;US)
Effect of fission neutron irradiation on the tensile and electrical properties of copper and copper alloys, 20:30022 (RA;US)
Effect of heat treatment on microstructure and fracture toughness of a V-5Cr-5Ti alloy, 20:30014 (RA;US)
Effect of internal hydrogen on the mixed-mode I/III fracture toughness of a ferritic/martensitic stainless steel, 20:30006 (RA;US)
Effect of irradiation spectrum on the microstructural evolution in ceramic insulators, 20:30097 (RA;US)

Effect of oxidation on tensile behavior of V-5Cr-5Ti alloy, 20:30018 (RA;US)
Effects of neutron irradiation on dimensional stability and on mechanical properties of SiC/SiC composites, 20:30160 (RA;US)
Elastic stability of high dose neutron irradiated spinel, 20:30100 (RA;US)
Embrittlement of Cr-Mo steels after low fluence irradiation in HFIR, 20:30008 (RA;US)
Energy efficiency capital requirements for buildings in the United States, 20:29898 (R;US)
Enhanced surface hardness in nitrogen-implanted silicon carbide, 20:30093 (R;US)
Environmental effects of planting energy crops at larger scales on agricultural lands, 20:29343 (R;US)
Environmental effects of planting biomass crops at larger scales on agricultural lands, 20:29344 (R;US)
Environmental effects of the US Antarctic Program's use of balloons in Antarctica, 20:30742 (R;US)
Evaluation of Foamseal ceiling panels in the large scale climate simulator under winder conditions. Phase I, 20:29916 (R;US)
Evaporative heat transfer in beds of sensible heat pellets, 20:29797 (RA;US)
Experiences in effective use of Tcl/Tk, 20:31364 (R;US)
Experimental analysis of a window air conditioner with a R-22 and R32/R125/R134a mixture, 20:29899 (R;US)
Experimental analysis of a window air conditioner with R-22 and zeotropic mixture of R-32/125/134a, 20:29915 (R;US)
Extraction of nitric acid, uranyl nitrate, and bismuth nitrate from aqueous nitric acid solutions with CMPO, 20:28907 (R;US)
Fabrication and performance testing of CaO insulator coatings on V-5%Cr-5%Ti in liquid lithium, 20:30094 (RA;US)
Fabrication of 500-kg heat of V-4Cr-4Ti, 20:30015 (RA;US)
Fabrication of aluminum nitride and its stability in liquid alkali metals, 20:30095 (RA;US)
Facility Interface Capability Assessment (FICA) project report, 20:28780 (R;US)
Facility Interface Capability Assessment (FICA) user manual, 20:28781 (R;US)
Fatigue behavior of unirradiated V-5Cr-5Ti, 20:30011 (RA;US)
Fatigue crack growth rate (FCGR) behavior of nicalon/SiC composites, 20:30096 (RA;US)
Feasibility of synthesizing oxide films on ceramic and metal substrates. Final report, August 1994–May 1995, 20:30121 (R;US)
Field demonstration of vapor phase TCE bioreactor. Final report, 20:29074 (R;US)
Field testing of a high-temperature aquifer thermal energy storage system, 20:29806 (RA;US)
Final report Brown and Sharpe CRADA, CRADA 92-0090, 20:30285 (R;US)
Final report for the ORNL/3M CRADA No. ORNL91-0061 for the period January 1, 1992–December 31, 1992, 20:30105 (R;US)
Final report on the Vitro CRADA, 20:29840 (R;US)
Forced chemical vapor infiltration of tubular geometries: Modeling, design, and scale-up, 20:28676 (RA;US)
Formation of novel optical materials by ion implantation, 20:30163 (R;US)
Friction and wear behavior of in-situ reinforced silicon nitride. Final report, 20:30103 (R;US)
Fuel qualification plan for the Advanced Neutron Source Reactor, 20:29573 (R;US)
Fundamental bioprocessing research for coal applications, 20:28631 (RA;US)
Future generations, environmental ethics, and global environmental change, 20:31287 (R;US)
Groundwater, A century of word evolution, 20:31407 (R;US)
Hardness recovery of 85% cold-worked V-Ti and V-Cr-Ti alloys upon annealing at 180°C to 1200°C, 20:30017 (RA;US)
Heat transfer enhanced microwave process for stabilization of liquid radioactive waste slurry. Final report, 20:28820 (R;US)
High-deposition-rate ceramics synthesis, 20:30131 (RA;US)
High-strength iron aluminide alloys, 20:30064 (RA;US)
Hybrid optics for the visible produced by bulk casting of sol-gel glass using diamond-turned molds, 20:30539 (R;US)
ICRF heating and transport of deuterium-tritium plasmas in TFTR, 20:31155 (R;US)
ICRF heating on helical devices, 20:31156 (R;US)
ICRF heating on helical devices, 20:31157 (R;US)
Impact properties of 500-kg heat of V-4Cr-4Ti, 20:30016 (RA;US)
Improved near surface heavy impurity detection by a novel charged particle energy filter technique, 20:30361 (R;US)
Inactive Tanks Remediation Program strategy and plans for Oak Ridge National Laboratory, Oak Ridge, Tennessee. Environmental Restoration Program, 20:28909 (R;US)
Inactive Tanks Remediation Program Batch I, Series I tanks 3001-B, 3004-B, 3013, and T-30 technical memorandum. Environmental Restoration Program, 20:28911 (R;US)
Incubation time for sub-critical crack propagation in SiC-SiC composites, 20:30158 (RA;US)
Indoor air and human health revisited: A recent IAQ symposium, 20:30836 (R;US)
Initial tensile test results from J316 stainless steel irradiated in the HFIR spectrally tailored experiment, 20:30009 (RA;US)
Integrated assessment briefs, 20:29854 (R;US)
Integrated design and analysis of rf heating and current drive systems, 20:31206 (R;US)
Investigation of heterodyne performance of quantum-well detectors. Final report, 20:31160 (R;US)
Ion-association: Models and thermodynamics, 20:30229 (R;US)
Large-scale biomass plantings in Minnesota: Scale-up and demonstration projects in perspective, 20:29194 (R;US)
Laser desorption mass spectrometry for fast DNA analysis, 20:30787 (R;US)
Lifecycle baseline summary for ADS 6504IS isotopes facilities Deactivation Project at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 20:29101 (R;US)
Low-aluminum content iron-aluminum alloys, 20:30065 (RA;US)
Magnetic field processing of inorganic polymers, 20:30179 (RA;US)
Materials R&D-student internships, 20:30074 (RA;US)
Measurement of rf voltages on the plasma-touching surfaces of ICRF antennas, 20:31204 (R;US)
Mechanically reliable scales and coatings, 20:30067 (RA;US)
Meeting notes of the High Flux Isotope Reactor (HFIR) futures group, 20:29572 (R;US)
Metallic and intermetallic-bonded ceramic composites, 20:30132 (RA;US)
Microstructural investigations of as-fabricated, long-term thermally aged and neutron irradiated RPV materials: An atom probe study, 20:29502 (R;US)
Microwave and RF assisted chemical vapor infiltration, 20:30133 (RA;US)
Microwave joining of SiC, 20:30136 (RA;US)
Microwave processing of ceramic oxide filaments, 20:30137 (RA;US)
Model of rotary-actuated flexible beam with notch filter vibration suppression controller and torque feedforward load compensation controller, 20:30281 (R;US)
Modeling phase transformations in ternary systems: Ferrite dissolution during continuous cooling, 20:29997 (R;US)
Modeling scaleup effects on a small pilot-scale fluidized-bed reactor for fuel ethanol production, 20:29377 (R;US)
Molecular dynamics on distributed-memory MIMD computers with load balancing, 20:31393 (R;US)
Multilevel converters for power system applications, 20:29783 (R;US)
Net lost revenue from DSM: State policies that work, 20:29875 (R;US)
Neutron dosimetry, damage calculations, and helium measurements for the HFIR-MFE-60J-1 and MFE-330J-1 spectral tailoring experiments, 20:30002 (RA;US)
Neutron flux spectra and radiation damage parameters for the Russian Bor-60 and SM-2 reactors, 20:29528 (RA;US)
Ni_3Al technology transfer, 20:30071 (RA;US)
ODS iron aluminides, 20:29995 (R;US)
ODS iron aluminides, 20:30066 (RA;US)
On-site laboratory support of Oak Ridge National Laboratory environmental restoration field activities, 20:28806 (R;US)

Optical absorption and luminescence in neutron-irradiated, silica-based fibers, 20:30161 (RA;US)
Optical imaging of charged particle tracks in a gas. Final report, 20:30506 (R;US)
ORNL stellarator divertor studies, 20:31205 (R;US)
Overview of ASTM standard activities in support of advanced structural ceramics development, 20:30092 (R;US)
Oxide coating development, 20:30122 (RA;US)
Particle exhaust of helium plasmas with actively cooled outboard pump limiter on Tore Supra, 20:31234 (R;US)
PCB extraction from ORNL tank WC-14 using a unique solvent, 20:28919 (R;US)
Performance enhancement of a compact radio frequency ion source by the injection of supplemental electrons, 20:30444 (R;US)
Performance of a chill ATES system, 20:29805 (RA;US)
Performance of parallel computers for spectral atmospheric models, 20:31365 (R;US)
Personal exposure to environmental tobacco smoke in workplace and away from work settings: A 16 city case study, 20:30695 (R;US)
Planning guidance for the Chemical Stockpile Emergency Preparedness Program, 20:30625 (R;US)
Plasma analysis and diagnostics for high efficiency amorphous solar cell production. Final report, 20:29388 (R;US)
Polymerization and processing of organic polymers in a magnetic field, 20:30180 (RA;US)
Precipitation-strengthening effects in iron-aluminides, 20:30072 (RA;US)
Preliminary report on the irradiation conditions of the HFIR JP-23 experiment, 20:30003 (RA;US)
Preliminary TES design optimization study for a simple periodic brick plant, 20:29924 (RA;US)
Proceedings of the ninth annual conference on fossil energy materials, 20:29991 (R;US)
Project management plan for inactive tanks 3001-B, 3004-B, 3013, and T-30 at Oak Ridge National Laboratory, Oak Ridge, Tennessee. Environmental Restoration Program, 20:28913 (R;US)
Quality Assurance Project Plan for the treatability study of in situ vitrification of Seepage Pit 1 in Waste Area Grouping 7 at Oak Ridge National Laboratory, 20:28912 (R;US)
Radiation-induced electrical degradation experiments in the Japan materials testing reactor, 20:30101 (RA;US)
Recent program evaluations: Implications for long-run planning, 20:29792 (R;US)
Reciprocating sliding wear of in-situ reinforced silicon nitride, 20:30104 (R;US)
Redistribution of block-cyclic data distributions using MPI, 20:31366 (R;US)
Renewable hydrogen production for fossil fuel processing, 20:28633 (RA;US)
Report of the ANS Project Feasibility Workshop for a High Flux Isotope Reactor-Center for Neutron Research Facility, 20:29574 (R;US)
Selective inorganic thin films, 20:30138 (RA;US)
Self-releasing submerged ice maker, 20:29801 (RA;US)
Simulation of a high temperature thermal energy storage system employing several families of phase-change storage material, 20:29803 (RA;US)
Site investigation report for Waste Area Grouping 4 at Oak Ridge National Laboratory. Volume 1, Text: Environmental Restoration Program, 20:28914 (R;US)
Site investigation report for Waste Area Grouping 4 at Oak Ridge National Laboratory. Volume 2, Appendixes: Environmental Restoration Program, 20:28915 (R;US)
Sludge application and monitoring program on the Oak Ridge Reservation, 1986 through 1993, 20:29953 (R;US)
Sludge application and monitoring program on the Oak Ridge Reservation, 1986–1993, 20:29965 (R;US)
Status of the ORNL liquid low-level waste management upgrades, 20:28917 (R;US)
Status of U.S./Japan collaborative program phase II HFIR target and RB* capsules, 20:29999 (RA;US)
Superior metallic alloys through rapid solidification processing (RSP) by design, 20:30073 (RA;US)
Surface radiological investigations at the proposed SWSA 7 Site, Oak Ridge National Laboratory, Oak Ridge, Tennessee, 20:29031 (R;US)
Synthesis and design of intermetallic materials - molybdenum disilicide, 20:30126 (RA;US)
Synthesis and processing of composites by reactive metal penetration, 20:30134 (RA;US)
TERRAIN: A computer program to process digital elevation models for modeling surface flow, 20:30776 (R;US)
The evaluation of retrofit measures in a tall residential building, 20:29900 (R;US)
The integration of renewable energy sources into electric power transmission systems, 20:29400 (R;US)
Thermal conductivity degradation of graphites irradiated at low temperature, 20:30157 (RA;US)
Thermal energy storage program description, 20:29866 (RA;US)
Thermal energy storage with liquid-liquid systems, 20:29802 (RA;US)
Thermal performance of steel-framed walls. Final report, 20:29905 (R;US)
Three-dimensional x-ray tomography of crack-resistant composites: New paradigms for process optimization, 20:30135 (RA;US)
Uncertainty analysis for low-level radioactive waste disposal performance assessment at Oak Ridge National Laboratory, 20:29042 (R;US)
Use of electric fields to enhance industrial chemical processing. Final report, 20:29929 (R;US)
Vanadium alloy irradiation experiment X530 in EBR-II*, 20:30000 (RA;US)
Vanadium irradiation at ATR - neutronics aspects, 20:30001 (RA;US)
Void structure and density change of vanadium-base alloys irradiated in the dynamic helium charging experiment, 20:30021 (RA;US)
Waste management plan for inactive LLLW tanks 3001-B, 3004-B, 3013, and T-30 at Oak Ridge National Laboratory, Oak Ridge, Tennessee. Environmental Restoration Program, 20:28910 (R;US)
Weldability of polycrystalline aluminides. Topical report, 20:30068 (R;US)
Welding and mechanical properties of cast FAPY (Fe-16 at. % Al-based) alloy slabs, 20:30069 (R;US)
Welding development for V-Cr-Ti alloys, 20:30012 (RA;US)
What is plutonium stabilization, and what is safe storage of plutonium?, 20:28916 (R;US)
Y-12 development organization technical progress report, Part 3: Metal processing period ending March 1, 1995, 20:30089 (R;US)
[A variable frequency microwave furnace]. CRADA final report for CRADA Number ORNL91-0055, 20:30164 (R;US)

Oak Ridge National Lab., TN (United States). Carbon Dioxide Information Analysis Center
Total carbon dioxide, hydrographic, and nitrate measurements in the Southwest Pacific during Austral autumn, 1990: Results from NOAA/PMEL CGC-90 cruise, 20:30775 (R;US)

Oak Ridge Y-12 Plant, TN (United States)
Best Management Practices (BMP) plan for potable water discharges Y-12 Plant, 20:30771 (R;US)
Calendar year 1994 groundwater quality report for the Upper East Fork Poplar Creek Hydrogeologic Regime, Y-12 Plant, Oak Ridge, Tennessee: 1994 groundwater quality data and calculated rate of contaminant migration, 20:29007 (R;US)
Calendar year 1994 groundwater quality report for the Chestnut Ridge Hydrogeologic Regime, Y-12 Plant, Oak Ridge, Tennessee. 1994 groundwater quality data and calculated rate of contaminant migration, 20:29008 (R;US)
Engineering report for the Central Mercury Treatment System. Revision 1, 20:30783 (R;US)
Evaluation of photoneutron production at high energy LINACS, 20:29181 (R;US)
Radiological monitoring plan for the Oak Ridge Y-12 Plant: Surface water, 20:30784 (R;US)
Resource Conservation and Recovery Act (RCRA). Part B, Permit application for the production and classified Waste Storage Units at the Oak Ridge Y-12 Plant. Building 9720-32 Production

Waste Storage Unit; Building 9720-59 Classified Waste Storage Unit, 20:29009 (R;US)

Oesterreichische Physikalische Gesellschaft, Vienna (Austria)
Erbium-doped silicon - base material for IR-light sources?, 20:31126 (IA;AT;In German)

Ohio Coal Development Office, Columbus, OH (United States)
Investigation of the use of fly-ash based autoclaved cellular concrete blocks in coal mines for air duct work. Final report, January 25, 1993–December 31, 1994, 20:28657 (R;US)

Oklahoma Univ., Norman, OK (United States)
Continued support of "the Natural Resources Information System (NRIS) for the State of Oklahoma": Inclusion of a Native American focused effort. Quarterly technical progress report, April 1, 1995–June 30, 1995, 20:28688 (R;US)
GYPSY field project in reservoir characterization. Quarterly progress report, April 1, 1995–June 30, 1995, 20:28681 (R;US)
Identification and evaluation of fluvial-dominated deltaic (Class 1 oil) reservoirs in Oklahoma. Quarterly technical progress report, October 1, 1994–December 31, 1994, 20:28694 (R;US)
Identification and evaluation of fluvial-dominated deltaic (Class 1 oil) reservoirs in Oklahoma. Quarterly technical progress report, January 1, 1995–March 31, 1995, 20:28695 (R;US)
Liquid natural gas as a transportation fuel in the heavy trucking industry. Fourth quarterly progress report, April 1, 1995–June 30, 1995, 20:28760 (R;US)

Oklahoma Univ., Norman, OK (United States). Cooperative Inst. for Mesoscale Meteorological Studies
Site scientific mission plan for the southern great plains CART site, July–December 1995, 20:30638 (R;US)

Optomec Design Co., Los Alamos, NM (United States)
Opto-mechanical design and fabrication services. Final report, 20:30604 (R;US)
Opto-mechanical support services. Final report, 20:30622 (R;US)

Oregon Inst. of Tech., Klamath Falls, OR (United States). Geo-Heat Center
Ground-source heat pump case studies and utility programs, 20:29422 (R;US)

Oregon State Univ., Corvallis, OR (United States). Dept. of Mechanical Engineering
Radiative transfer through an array of discrete surfaces. Final report, 20:30333 (R;US)

Oregon State Univ., Corvallis, OR (United States). Dept. of Microbiology
Understanding and targeting a novel plant viral proteinase/substrate interaction. Final report, July 1, 1989–June 30, 1995, 20:30788 (R;US)

Oregon State Univ., Corvallis, OR (United States). Dept. of Nuclear Engineering
Fabric composite radiators for space nuclear power applications. Final report, March 1993, 20:29487 (R;US)

Oslo Univ. (Norway)
Two- and three-dimensional model calculations of the photochemistry of the troposphere, 20:30665 (R;NO)

Oxy USA, Inc., Midland, TX (United States)
Application of reservoir characterization and advanced technology to improve recovery and economics in a lower quality shallow shelf carbonate reservoir. Quarterly progress report, March 1, 1995–June 30, 1995, 20:28699 (R;US)

P

Pacific Northwest Lab., Richland, WA (United States)
1995 Baseline solid waste management system description, 20:28944 (R;US)
209-E Upgrades, 20:29136 (R;US)
A general algorithm for radioactive decay with branching and loss from a medium, 20:31044 (R;US)
A survey and description of candidate technologies to support single shell tank waste retrieval, leak detection, monitoring, and mitigation, 20:28949 (R;US)
Advanced organic analysis and analytical methods development: FY 1995 progress report. Waste Tank Organic Safety Program, 20:28955 (R;US)
An accurate, efficient algorithm for calculation of quantum transport in extended structures, 20:30370 (R;US)
AREST-CT V1.0 software verification, 20:28937 (R;US)
Bayesian methods for the combination of core sampling data with historical models for tank characterization, 20:28938 (R;US)
Central solar heating plants with seasonal storage, 20:29402 (RA;US)
Chemical and radiation stability of SuperLig®644, resorcinol-formaldehyde, and CS-100 cesium ion exchange materials, 20:30221 (R;US)
Chemical process safety management within the Department of Energy, 20:29109 (R;US)
Chemical structure and dynamics. Annual report 1994, 20:29855 (R;US)
Clean option: Berkeley Pit water treatment and resource recovery strategy, 20:30746 (R;US)
Complex-compound low-temperature TES system, 20:29804 (RA;US)
Computer and graphics modeling of heat transfer and phase change in a wall with randomly imbibed PCM, 20:29897 (RA;US)
Cost effectiveness of the 1993 model energy code in New Jersey, 20:29917 (R;US)
Data fusion analysis of a surface direct-current resistivity and well pick data set, 20:29103 (R;US)
Determination of the radioactive material and plutonium holdup in ducts and piping in the 327 Building, 20:29135 (R;US)
Development of a direct contact ice storage system, 20:29800 (RA;US)
Development of a network-based information infrastructure to facilitate hydrosystems and fisheries planning in the Columbia-Snake River Basin, 20:31408 (R;US)
Development of PCM wallboard for heating and cooling of residential buildings, 20:29896 (RA;US)
Development of separation techniques for a direct contact thermal energy storage system, 20:29799 (RA;US)
Dilution physics modeling: Dissolution/precipitation chemistry, 20:28960 (R;US)
Effect of colloidal aggregation on the sedimentation and rheological properties of tank waste, 20:28950 (R;US)
Effect of dopants on crystal structure and thermal properties of pentaglycerine, 20:29798 (RA;US)
Effectiveness of storage practices in mitigating aging degradation during reactor layup, 20:29777 (R;US)
Effects of cooking on levels of PCBs in the fillets of winter flounder (Pseudopleureonectes americanus), 20:30840 (R;US)
Estimating environmental benefits of energy programs, 20:29881 (R;US)
Estimating the hydrogen ion concentration in concentrated NaCl and Na_2SO_4 electrolytes, 20:30244 (R;US)
Evaluation of the single-pass flow-through test to support a low-activity waste specification, 20:28947 (R;US)
Evaporative heat transfer in beds of sensible heat pellets, 20:29797 (RA;US)
Ferrocyanide Safety Program cyanide speciation studies. Final report, 20:28939 (R;US)
Ferrocyanide tank safety program: Cesium uptake capacity of simulated ferrocyanide tank waste. Final report, 20:28940 (R;US)
Field testing of a high-temperature aquifer thermal energy storage system, 20:29806 (RA;US)
Gas bubble retention and its effect on waste properties: Retention mechanisms, viscosity, and tensile and shear strengths, 20:28943 (R;US)
Hanford Site environmental data for calendar year 1994: Surface and Columbia River, 20:30668 (R;US)
Hanford Site ground-water monitoring for 1994, 20:29105 (R;US)
Hanford Site National Environmental Policy Act (NEPA) characterization. Revision 7, 20:30635 (R;US)
Hydrochemistry and hydrogeologic conditions within the Hanford Site upper basalt confined aquifer system, 20:30747 (R;US)
Impacts of the distributed utility on transmission system stability, 20:29788 (R;US)
Ion exchange removal of cesium from simulated and actual supernate from Hanford tanks 241-SY-101 and 241-SY-103, 20:28959 (R;US)

Leach test of cladding removal waste grout using Hanford groundwater, 20:28946 (R;US)
Liquid Effluent Monitoring Program at the Pacific Northwest Laboratory, 20:29108 (R;US)
Literature review of arc/plasma, combustion, and joule-heated melter vitrification systems, 20:28935 (R;US)
Location analysis and strontium-90 concentrations in deer antlers on the Hanford Site, 20:30832 (R;US)
Mapping of top of permafrost using a direct current resistivity survey, 20:30748 (R;US)
No maintenance – no energy efficiency, 20:29918 (R;US)
Organic analysis of ambient samples collected near Tank 241-C-103: Results from samples collected on May 12, 1994, 20:28927 (R;US)
Organic tank safety project: Preliminary results of energetics and thermal behavior studies of model organic nitrate and/or nitrite mixtures and a simulated organic waste, 20:28926 (R;US)
Overview of contamination from US and Russian nuclear complexes, 20:28963 (R;US)
Pacific Northwest Laboratory ALARA report for Calendar Year 1994, 20:29106 (R;US)
Performance of a chill ATES system, 20:29805 (RA;US)
Preliminary TES design optimization study for a simple periodic brick plant, 20:29924 (RA;US)
Radionuclide concentrations in terrestrial vegetation and soil on and around the Hanford Site, 1983 through 1993, 20:30745 (R;US)
Recommendations for the treatment of aging in standard technical specifications, 20:29449 (R;US)
Redox reaction and foaming in nuclear waste glass melting, 20:28929 (R;US)
Regulatory instrument review: Aging management of LWR cables, containment and basemat, reactor coolant pumps, and motor-operated valves, 20:29518 (R;US)
Removal of strontium and transuranics from Hanford waste via hydrothermal processing – FY 1994/95 test results, 20:28953 (R;US)
Removal of strontium and transuranics from Hanford tank waste via addition of metal cations and chemical oxidant: FY 1995 test results, 20:28954 (R;US)
Review of alternative residual contamination guides for the 324 Building B-Cell Cleanout Project. Phase 1, 20:28931 (R;US)
Scoring methods and results for qualitative evaluation of public health impacts from the Hanford high-level waste tanks. Integrated Risk Assessment Program, 20:28942 (R;US)
Sedimentation models, 20:28948 (R;US)
Self-releasing submerged ice maker, 20:29801 (RA;US)
Simulation of a high temperature thermal energy storage system employing several families of phase-change storage material, 20:29803 (RA;US)
Sitewide feasibility study Eielson Air Force Base, Alaska, 20:29107 (R;US)
Solubilities of gases in simulated Tank 241-SY-101 wastes, 20:28957 (R;US)
Special nuclear materials cutoff exercise: Issues and lessons learned. Volume 1: Summary of exercise, 20:29134 (R;US)
Structural vibration control of micro/macro-manipulator using feed-forward and feedback approaches, 20:30309 (R;US)
Synthesis, structural characterization, and performance evaluation of resorcinol-formaldehyde (R-F) ion-exchange resin, 20:28945 (R;US)
Tank Waste Treatment Science Task quarterly report for October–December 1994, 20:28951 (R;US)
Tank Waste Treatment Science Task quarterly report for January–March 1995, 20:28952 (R;US)
The comparison of element partitioning in two types of thermal treatment facilities and the effects on potential radiation dose, 20:28961 (R;US)
The effect of dilution on the gas-retention behavior of Tank 241-SY-101 waste, 20:28956 (R;US)
The role of plants and animals in isolation barriers at Hanford, Washington, 20:28958 (R;US)
Theory and numerical application of subsurface flow and transport for transient freezing conditions, 20:28962 (R;US)
Thermal energy storage program description, 20:29866 (RA;US)
Thermal energy storage with liquid-liquid systems, 20:29802 (RA;US)
Thermal modeling of tanks 241-AW-101 and 241-AN-104 with the TEMPEST code, 20:28936 (R;US)
Toxicology profiles of chemical and radiological contaminants at Hanford, 20:29104 (R;US)
User's guide for PLTWIND Version 1.0: PC-based software for generating plots of monitored wind data and gridded wind fields for Hanford emergency response applications, 20:30669 (R;US)
Validation study of air-sea gas transfer modeling, 20:30904 (R;US)
Vapor space characterization of waste tank 241-BY-110: Results for samples collected on 11/11/94, 20:28928 (R;US)
Vapor space characterization of waste tank 241-S-102: Results from samples collected on 3/14/95, 20:28930 (R;US)
Vapor space characterization of waste tank 241-BX-104: Results from samples collected on 12/30/94, 20:28932 (R;US)
Vapor space characterization of waste tank 241-C-112: Results from samples collected on 8/11/94, 20:28933 (R;US)
Vapor space characterization of waste tank 241-TY-103: Results from samples collected on 4/11/95, 20:28934 (R;US)
Washing and caustic leaching of Hanford tank sludges: Results of FY 1995 studies, 20:28941 (R;US)

PAI Corp., Oak Ridge, TN (United States)

Pollution prevention opportunity assessment for the K-25 Site Toxic Substances Control Act Incinerator Operations, Level III, 20:28859 (R;US)

Paul Scherrer Inst. (PSI), Villigen (Switzerland)

A novel 2-step water-splitting thermochemical cycle for solar energy conversion, 20:29188 (RA;CH)
A quantitative mechanistic description of Ni, Zn and Ca sorption on Na-Montmorillonite. Part I: Physico-chemical characterisation and titration measurements, 20:30222 (R;CH)
A quantitative mechanistic description of Ni, Zn and Ca sorption on Na-Montmorillonite. Part II: Sorption measurements, 20:30223 (R;CH)
A quantitative mechanistic description of Ni, Zn and Ca sorption on Na-Montmorillonite. Part III: Modelling, 20:30224 (R;CH)
Activated glassy carbon as a supercapacitor material, 20:29796 (RA;CH)
Aspects of carbon dioxide CARS temperature metrology, 20:30879 (RA;CH)
Asymmetric diurnal temperature trend in the alpine region, 20:30646 (RA;CH)
Calibration of an optical crosswind anemometer, 20:30540 (RA;CH)
CARS temperature measurements in laminar and turbulent high pressure flames, 20:30878 (RA;CH)
Catalytic dehydrogenation of methylcyclohexane in fixed bed reactors with an ex situ palladium (Pd)-silver (Ag) membrane, 20:29187 (RA;CH)
Computational fluid dynamics simulation of high-temperature solar chemical reactors, 20:29403 (RA;CH)
Design of a high-pressure laboratory reactor and analytical interface for on-line reaction monitoring, 20:29374 (RA;CH)
Development and cycle test of zinc-oxygen cells, 20:29811 (RA;CH)
Double phase-conjugate four-wave mixing of S_2 and OH in flames, 20:28731 (RA;CH)
Estimation of the natural non-methane VOC emissions from vegetation in Switzerland, 20:30645 (RA;CH)
Evaporation of heavy metals during the heat treatment of residues from municipal solid waste incineration, 20:29955 (RA;CH)
Fate of heavy metals during refuse incineration, 20:29954 (RA;CH)
Fluidized bed reactor for the gasification of biomass, 20:29291 (RA;CH)
Improvements in the yield of methanol synthesis from CO_2 and H_2 by using permselective membrane at 200°C, 20:29375 (RA;CH)
Insertion electrodes for lithium batteries, 20:29812 (RA;CH)
Kinetic investigations on solar-driven thermochemical cycles with metal oxides to produce hydrogen from water, 20:29404 (RA;CH)
Luminescence and photoconversion of solar energy, 20:30249 (RA;CH)
Microelectrode investigation of the oxygen permeation in different proton exchange membranes, 20:29888 (RA;CH)
Paul Scherrer Institut annual report 1994. Annex V: PSI general energy technology newsletter 1994, 20:29809 (R;CH)

Reduction of NO and SO_2 in two-stage fluidized shallow bed coal combustor (100 kW_{th}), 20:28674 (RA;CH)
Scale-up of polymer electrolyte fuel cells, 20:29889 (RA;CH)
Self discharge of the nickel oxide electrode, 20:29810 (RA;CH)
Simultaneous measurement of temperature, emissivity, and irradiance of surfaces irradiated in a solar furnace, 20:29405 (RA;CH)
Single-pulse measurements of the sound velocity in gases by laser-induced electrostrictive gratings, 20:30877 (RA;CH)
Solar-processed zinc as clean energy carrier, 20:29189 (RA;CH)
Suppression of higher harmonics in nonlinear periodically driven stochastic systems, 20:31335 (RA;CH)
The use of stable isotopes in ecological research: tracking the nitrogen fluxes of airborne NO_2 in plants, 20:30232 (RA;CH)
Thermally forced local wind fields, 20:30647 (RA;CH)

Pennsylvania State Univ., University Park, PA (United States). Dept. of Materials Science and Engineering
Novel bimetallic dispersed catalysts for temperature-programmed coal liquefaction. Technical progress report, January–March, 1995, 20:28617 (R;US)

Pennsylvania Univ., Philadelphia, PA (United States)
High energy physics research. Final technical report, 1957–1994, 20:30916 (R;US)

Pittsburgh Univ., PA (United States). Dept. of Mechanical Engineering
A theoretical and numerical study of the flow of granular materials down an inclined plane. [Quarterly progress report, January–March 1995], 20:28661 (R;US)

PLG, Inc., Newport Beach, CA (United States)
Multidisciplinary framework for human reliability analysis with an application to errors of commission and dependencies, 20:29776 (R;US)

Portsmouth Gaseous Diffusion Plant, OH (United States)
Verification of criticality accident alarm system detector locations for the X-326 process cell floor, 20:30310 (R;US)

Power Environmental Services, Inc., Butte, MT (United States)
Advanced coal conversion process demonstration. Progress report, January 1, 1992–December 31, 1992, 20:28580 (R;US)

Report of 6th new nuclear fuel research meeting, Yayoi Research Group. Recent topics on nuclear fuel technical development, 20:29520 (R;JP;In Japanese)

Tromsoe Univ. (Norway)
Geometric and kinematic analysis of tertiary fold and thrust structures in Spitsbergen, Svalbard: Comparison with the Rocky Mountain foreland, 20:28686 (R;NO)
Late Pleistocene evolution of the submarine fans off the western Barents Sea margin, 20:28687 (R;NO)

TRW, Inc., Redondo Beach, CA (United States)
MCL (Gravimelt) System Integration Project. Quarterly report, January–March 1988, 20:28608 (R;US)
MCL (Gravimelt) System Integration Project. Quarterly report, October–December 1988, 20:28609 (R;US)

TRW, Inc., Redondo Beach, CA (United States). Applied Technology Div.
Gravimelt Process (Molten-Caustic-Leaching). Quarterly report, January–March 1989, 20:28610 (R;US)
Molten-Caustic-Leaching (Gravimelt) System Integration Project. Quarterly report, July–September 1989, 20:28611 (R;US)

Tulane Univ., New Orleans, LA (United States). Dept. of Chemical Engineering
Field studies of beach cones as coastal erosion control/reversal devices for areas with significant oil and gas activities. Final report, February 24, 1992–September 18, 1995, 20:28717 (R;US)

U

UNESP, Araraquara, SP (Brazil). Inst. de Quimica
Preparation of lead titanate zirconate from metal citrates, 20:30109 (I;BR;In Portuguese)

United Technologies Research Center, East Hartford, CT (United States)
Coal-fired high performance power generating system. Draft quarterly progress report, January 1–March 31, 1995, 20:29431 (R;US)

Universal Fuel Development Associates, Inc., Grand Forks, ND (United States)
Fine particle clay catalysts for coal liquefaction. Final technical report, 20:28604 (R;US)
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, February 9, 1993–May 8, 1993, 20:28598 (R;US)
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, May 8, 1993–August 8, 1993, 20:28599 (R;US)
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, November 9, 1992–February 8, 1993, 20:28600 (R;US)
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, May 9, 1992–August 8, 1992, 20:28601 (R;US)
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, February 9, 1992–May 8, 1992, 20:28602 (R;US)
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, November 9, 1991–February 8, 1992, 20:28603 (R;US)

Universidad Autonoma del Estado de Mexico, Toluca (Mexico). Escuela de Ciencias
Study of the striated nature of a glow discharge., 20:31162 (I;MX;In Spanish)

Universidad Autonoma del Estado de Mexico, Toluca (Mexico). Facultad de Quimica
Electrodeposition of nickel onto steel, using a thermostatic cell and movable anode by a variable current., 20:30030 (I;MX;In Spanish)
Photochemical decomposition of Formaldehyde in solution., 20:30251 (I;MX;In Spanish)
Synthesis and characterization of tetraphenylporphyrinate of dysprosium route dysprosium acetylacetonate., 20:30234 (I;MX;In Spanish)

Universidad Autonoma Metropolitana, Mexico City (Mexico). Div. de Ciencias Basicas y Ingenieria
Sorption of Fe^{3+}, Co^{2+}, Ce^{3+}, Cs^{+} and Ba^{2+} in zeolite X., 20:30233 (I;MX;In Spanish)

Universidad Nacional Autonoma de Mexico, Mexico City (Mexico)
Tritium extraction from neutron-irradiated lithium aluminate., 20:29155 (I;MX;In Spanish)

Universidad Nacional Autonoma de Mexico, Mexico City (Mexico). Facultad de Ciencias
Genotoxic valuation of Zinalco, a zinc base alloy, by the mutation and somatic recombination test in Drosophila Melanogaster., 20:30200 (I;MX;In Spanish)
Quality characteristics of chemicals for the radioimmunoassay of thyroxine and thyrotropin., 20:30816 (I;MX;In Spanish)

Universidad Nacional Autonoma de Mexico, Mexico City (Mexico). Facultad de Ciencias Politicas y Sociales
The uranium International trade., 20:29494 (I;MX;In Spanish)

Universidad Nacional Autonoma de Mexico, Mexico City (Mexico). Facultad de Quimica
Degradation by radiation of the response of a thermocouple of a fuel element., 20:29531 (I;MX;In Spanish)
Preparation of uranium targets and application of analytical techniques for its evaluation., 20:30110 (I;MX;In Spanish)

Universidad Veracruzana, Jalapa (Mexico). Facultad de Ingenieria Quimica
Qualitative chemical analysis of plutonium by Alpha spectroscopy., 20:28769 (I;MX;In Spanish)

Universidade Estadual de Campinas, SP (Brazil). Faculdade de Ciencias Medicas
Breast carcinoma conservative treatment. Stages I and II, 20:30803 (I;BR;In Portuguese)

Universidade Estadual de Campinas, SP (Brazil). Faculdade de Engenharia
The new tariff model based on marginal costs developing concept for Brazilian electric sector. A case study for Power and Light Company of Sao Paulo State (Brazil), 20:29795 (I;BR;In Portuguese)

Universidade Estadual de Campinas, SP (Brazil). Inst. de Economia
Resources transfer and centralization in Brazilian electrical sector: the reversion global reserve (RGR) and the guarantee global reserve (GGR), 20:29793 (I;BR;In Portuguese)

Universidade Estadual de Campinas, SP (Brazil). Inst. de Fisica
Dating by fission track method: study of neutron dosimetry with natural uranium thin films, 20:30199 (I;BR;In Portuguese)
Obsidian dating by fission track method, 20:30712 (I;BR;In Portuguese)

Universidade Federal Rural do Rio de Janeiro, RJ (Brazil). Curso de Pos-graduacao em Agronomia
Evaluation of the biological nitrogen fixation (N_2) contribution in several forage legumes and the transfer of N to associated grasses, 20:30813 (I;BR;In Portuguese)

Universidade Federal Rural do Rio de Janeiro, RJ (Brazil). Curso de Pos-graduacao em Patologia Veterinaria
Basic aspects of scintiphotography for the encephalopathy studies in Canis familiaris L., 20:30802 (I;BR;In Portuguese)
Serum levels of triiodothyronine (T_3) and thyroxine (T_4) in buffalo (Bubalus bubalis Lin.) raised in Amazon region, 20:30814 (I;BR;In Portuguese)

Universidade Federal, Rio de Janeiro, RJ (Brazil). Inst. de Biofisica
Change of the natural radiation exposure due to agriculture and industrial activities in a high natural radioactivity area from Brazil, 20:30824 (I;BR;In Portuguese)

University of Southern California, Los Angeles, CA (United States). Dept. of Chemical Engineering
Hindered diffusion of coal liquids. Quarterly report No. 10, December 18, 1994–March 17, 1995, 20:28638 (R;US)

USDOE Assistant Secretary for Conservation and Renewable Energy, Washington, DC (United States). Office of Energy Management
Central solar heating plants with seasonal storage, 20:29402 (RA;US)
Complex-compound low-temperature TES system, 20:29804 (RA;US)
Computer and graphics modeling of heat transfer and phase change in a wall with randomly imbibed PCM, 20:29897 (RA;US)
Development of a direct contact ice storage system, 20:29800 (RA;US)
Development of PCM wallboard for heating and cooling of residential buildings, 20:29896 (RA;US)
Development of separation techniques for a direct contact thermal energy storage system, 20:29799 (RA;US)
Effect of dopants on crystal structure and thermal properties of pentaglycerine, 20:29798 (RA;US)
Evaporative heat transfer in beds of sensible heat pellets, 20:29797 (RA;US)
Field testing of a high-temperature aquifer thermal energy storage system, 20:29806 (RA;US)
Performance of a chill ATES system, 20:29805 (RA;US)
Preliminary TES design optimization study for a simple periodic brick plant, 20:29924 (RA;US)
Self-releasing submerged ice maker, 20:29801 (RA;US)
Simulation of a high temperature thermal energy storage system employing several families of phase-change storage material, 20:29803 (RA;US)
Thermal energy storage program description, 20:29866 (RA;US)
Thermal energy storage with liquid-liquid systems, 20:29802 (RA;US)

USDOE Assistant Secretary for Energy Efficiency and Renewable Energy, Washington, DC (United States)
Anaerobic digestion of livestock manures: A current opportunities casebook, 20:29248 (R;US)

USDOE Assistant Secretary for Environment, Safety, and Health, Washington, DC (United States). Office of Environmental Guidance
RCRA contingency plans and emergency procedures, 20:29832 (R;US)
RCRA corrective action: Statement of basis and response to comments decision documents, 20:29834 (R;US)
RCRA facility assessments, 20:29833 (R;US)
Waste management and the land disposal restriction storage prohibition, 20:29153 (R;US)

USDOE Assistant Secretary for Environment, Safety, and Health, Washington, DC (United States). RCRA/CERCLA Div.
Environmental Guidance Regulatory Bulletin, 20:29836 (R;US)
RCRA corrective action for underground storage tanks – Subtitle C for Subtitle I, 20:29835 (R;US)
Universal waste rule: Final rule issued. Environmental Guidance Regulatory Bulletin, 20:29927 (R;US)

USDOE Assistant Secretary for Environmental Management, Washington, DC (United States)
Needs assessment activity report: April 1995, 20:28778 (R;US)

USDOE Assistant Secretary for Environmental Management, Washington, DC (United States). Office of the Deputy Assistant Secretary for Technology Development
Landfill stabilization focus area: Technology summary, 20:30698 (R;US)

USDOE Assistant Secretary for Environmental Restoration and Waste Management, Washington, DC (United States)
Fiscal Year 1994 progress in implementing Section 120 of the Comprehensive Environmental Rresponse, Compensation, and Liability Act. Eighth annual report to Congress, 20:29839 (R;US)

USDOE Assistant Secretary for Fossil Energy, Washington, DC (United States). Office of Fuels Programs
Final environmental impact statement for construction and operation of the proposed Bangor Hydro-Electric Company's second 345-kV transmission tie line to New Brunswick, 20:29791 (R;US)

USDOE Assistant Secretary for Fossil Energy, Washington, DC (United States). Office of Strategic Petroleum Reserve
Strategic petroleum reserve. Quarterly report, 20:28719 (R;US)

USDOE Bonneville Power Administration, Portland, OR (United States)
Report on audit of Bonneville Power Administration's energy resource programs, 20:29871 (R;US)

USDOE Economic Regulatory Administration, Washington, DC (United States). Coal and Electricity Div.
A procedure for diamond turning KDP crystals, 20:30187 (R;US)

USDOE Energy Information Administration, Washington, DC (United States)
1995-1996 Strategic Plan, 20:31394 (R;US)
EIA new releases, July–August, 1995, 20:29878 (R;US)
Recently released EIA report presents international forecasting data, 20:29868 (R;US)
State energy severance taxes, 1985-1993, 20:29819 (R;US)
Winter fuels report, week ending October 6, 1995, 20:28713 (R;US)

USDOE Energy Information Administration, Washington, DC (United States). Office of Coal, Nuclear, Electric and Alternate Fuels
Electric Power Monthly, September 1995: With data for June 1995, 20:29879 (R;US)
Electricity generation and environmental externalities: Case studies, September 1995, 20:29837 (R;US)
World nuclear outlook 1995, 20:29492 (R;US)

USDOE Energy Information Administration, Washington, DC (United States). Office of Energy Markets and End Use
Changes in energy intensity in the manufacturing sector 1985–1991, 20:29928 (R;US)
Household energy consumption and expenditures 1993, 20:29880 (R;US)
International petroleum statistics report, 20:28710 (R;US)
International petroleum statistics report, September 1995, 20:28711 (R;US)
Oil and gas development in the United States in the early 1990's: An expanded role for independent producers, 20:29874 (R;US)
Short-term energy outlook. Quarterly projections, Third quarter 1995, 20:29815 (R;US)

USDOE Energy Information Administration, Washington, DC (United States). Office of Oil and Gas
Fuel oil and kerosene sales 1994, 20:28712 (R;US)
Natural gas monthly, August 1995, 20:28746 (R;US)
Natural gas monthly, September 1995, 20:28747 (R;US)
Petroleum marketing monthly, October 1995 with data for July 1995, 20:28709 (R;US)
Petroleum supply monthly, September 1995 with data for July 1995, 20:28708 (R;US)

USDOE Environmental Measurements Lab., New York, NY (United States)
Intercomparison of active and passive instruments for radon and radon progeny in North America, 20:30644 (R;US)
Long-term TLD measurements of environmental background radiation in the New York City Area, 20:30643 (R;US)

USDOE Idaho Operations Office, Idaho Falls, ID (United States)
Analysis of steady-state flow and advective transport in the Eastern Snake River Plain Aquifer System, Idaho, 20:30700 (R;US)
Vitrification melter study, 20:28808 (R;US)

USDOE Morgantown Energy Technology Center, WV (United States)
Method for reducing sulfate formation during regeneration of hot-gas desulfurization sorbents, 20:28634 (PA;US)

USDOE Office of Civilian Radioactive Waste Management, Washington, DC (United States)
Program cost and schedule baseline. Revision 5, (A00000000-00811-1701-00001), 20:28825 (R;US)
Site characterization progress report: Yucca Mountain, Nevada, October 1, 1994–March 31, 1995, Number 12. Nuclear Waste Policy Act (Section 113), 20:28826 (R;US)

USDOE Office of Energy Research, Washington, DC (United States). Advanced Energy Projects Div.
Advanced energy projects; FY 1995 research summaries, 20:31288 (R;US)

USDOE Office of Energy Research, Washington, DC (United States). Office of Health and Environmental Research
Natural and accelerated bioremediation research program plan, 20:29072 (R;US)

USDOE Office of Environmental Restoration and Waste Management, Washington, DC (United States)
Draft Waste Management Programmatic Environmental Impact Statement for managing treatment, storage, and disposal of radioactive and hazardous waste. Summary, 20:28807 (R;US)
The transportation external coordination working group, 20:28775 (R;US)

USDOE Office of Environmental Restoration and Waste Management, Washington, DC (United States). Office of Technology Development
FY-95 technology catalog. Technology development for buried waste remediation, 20:29073 (R;US)

USDOE Office of Inspector General, Albuquerque, NM (United States). Western Regional Audit Office
Audit of subsidized ancillary services at the Nevada Test site, 20:31311 (R;US)

USDOE Pittsburgh Energy Technology Center, PA (United States)
Commercial demonstration of the NOXSO SO_2/NO_x removal flue gas cleanup system, 20:29446 (R;US)
Eleventh annual coal preparation, utilization, and environmental control contractors conference: Proceedings, 20:28576 (R;US)
Fundamental study of ash formation and deposition: Effect of reducing stoichiometry. Quarterly Report No. 8, January 1, 1995–March 31, 1995, 20:28672 (R;US)

USDOE Richland Operations Office, WA (United States)
100 Area Source Operable Unit focused feasibility study. Volume 2, 20:29014 (R;US)
100-HR-3 Operable Unit focused feasibility study, 20:29081 (R;US)
100-KR-4 Operable Unit focused feasibility study, 20:29080 (R;US)
200-ZP-1 Operable Unit Treatability Test Report, 20:29023 (R;US)
Approach and plan for cleanup actions in the 100-FR-2 operable unit of the Hanford Site, Revision 0, 20:28824 (R;US)
Description of work for vadose zone characterization of the 1301-N and 1325-N liquid waste disposal facilities, 20:28823 (R;US)
Environmental Assessment: Relocation and storage of TRIGA® reactor fuel, Hanford Site, Richland, Washington, 20:29828 (R;US)

Interim remedial measure proposed plan for the 200-UP-1 operable unit, Hanford, Washington, Revision 0, 20:29022 (R;US)
Limited field investigation report for the 100-FR-1 Operable Unit, 20:29079 (R;US)
Proposal plan for interim remedial measures at the 100-KR-1 operable unit, Revision 0, 20:29021 (R;US)
Proposed plan for interim remedial measures at the 100-DR-1 Operable Unit, 20:29016 (R;US)
Proposed plan for interim remedial measures at the 100-HR-1 Operable Unit, Hanford Site, Richland, Washington, 20:29082 (R;US)
Proposed plan for interim remedial measures at the 100-HR-1 Operable Unit. Revision 1, 20:29017 (R;US)
Proposed plan for interim remedial measure at the 100-HR-3 Operable Unit, 20:29018 (R;US)
Proposed plan for interim remedial measure at the 100-HR-3 Operable Unit. Revision 1, 20:29019 (R;US)
Proposed plan for interim remedial measure at the 100-KR-4 operable unit, Revision 1, 20:29020 (R;US)
Proposed plan for interim remedial measures at the 100-KR-1 Operable Unit. Revision 1, 20:29083 (R;US)
Proposed plan for interim remedial measures at the 100-BC-1 Operable Units, 20:29015 (R;US)
Proposed plan for the 100-IU-1, 100-IU-3, 100-IU-4, AND 100-IU-5 Operable Units, 20:29024 (R;US)
Risk evaluation of remedial alternatives for the Hanford Site, 20:29077 (R;US)
Riverland expedited response action assessment, 20:29013 (R;US)
Single-shell tank closure work plan. Revision A, 20:29076 (R;US)
Sodium dichromate expedited response action assessment, Revision 3, 20:29078 (R;US)
Soil washing pilot plant treatability test for the 100-DR-1 Operable Unit, 20:29084 (R;US)

USDOE San Francisco Operations Office, Oakland, CA (United States)
Environmental Assessment for the proposed modification and continued operation of the DIII-D facility, 20:29831 (R;US)

USDOE Savannah River Operations Office, Aiken, SC (United States)
Environmental Assessment for the construction and operation of the Health Physics Site Support Facility on the Savannah River Site, 20:29829 (R;US)

USDOE, Washington, DC (United States)
Delineation of Piceance Basin basement structures using multiple source data: Implications for fractured reservoir exploration, 20:28732 (RA;US)
Development and utilization strategies for recovery and utilization of coal mine methane, 20:28738 (RA;US)
Environmental Assessment for decontaminating and decommissioning the General Atomics Hot Cell Facility. Final [report], 20:29830 (R;US)
Environmental Assessment for the Operation of the Glass Melter Thermal Treatment Unit at the US Department of Energy's Mound Plant, Miamisburg, Ohio, 20:29827 (R;US)
Gas-and water-saturated conditions in the Piceance Basin, Western Colorado: Implications for fractured reservoir detection in a gas-centered coal basin, 20:28733 (RA;US)
Implementing US Department of Energy lessons learned programs. Volume 1, 20:31300 (R;US)
Implementing US Department of Energy lessons learned programs. Volume 2, 20:31301 (R;US)
Integrated exploration strategy for locating areas capable of high gas rate cavity completion in coalbed methane reservoirs, 20:28737 (RA;US)
Methane recovery from animal manures: A current opportunities casebook, 20:29247 (R;US)
Radioactive and other environmental threats to the United States and the Arctic resulting from past Soviet activities, 20:28971 (R;US)
Recent federal initiatives to promote unconventional gas: High octane delivery of just hot air?, 20:28739 (RA;US)
Structurally controlled and aligned tight gas reservoir compartmentalization in the San Juan and Piceance Basins, 20:28734 (RA;US)
The Tokamak Fusion Test Reactor decontamination and decommissioning project and the Tokamak Physics Experiment at the Princeton Plasma Physics Laboratory. Environmental Assessment, 20:31209 (R;US)

Utah Dept. of Natural Resources, Salt Lake City, UT (United States)
Increased oil production and reserves from improved completion techniques in the Bluebell Field, Uinta Basin, Utah. Seventh quarterly technical progress report, April 1, 1995–June 30, 1995, 20:28680 (R;US)

Utah Geological and Mineral Survey, Salt Lake City, UT (United States)
Geological and petrophysical characterization of the Ferron Sandstone for 3-D simulation of a fluvial-deltaic reservoir. Technical progress report, April 1–June 30, 1995, 20:28678 (R;US)

V

Victoria Univ., BC (Canada)
Research on Mega-Math: Discrete mathematics and computer science for children. Final report, 20:31296 (R;US)

Virginia Center for Coal and Minerals Processing, Blacksburg, VA (United States)
Bench-scale testing of the multi-gravity separator in combination with microcel. Final report, 20:28583 (R;US)

Virginia Polytechnic Inst. and State Univ., Blacksburg, VA (United States). Dept. of Mining and Minerals Engineering
Controlling incipient oxidation of pyrite for improved rejection. Technical progress report for the ninth quarter, October 1–December 31, 1994, 20:28586 (R;US)
Controlling incipient oxidation of pyrite for improved rejection. Eighth quarterly technical progress report, July 1, 1994–September 30, 1994, 20:28587 (R;US)

W

Washington Univ., Seattle, WA (United States)
Women in engineering program advocates network (WEPAN): Evaluation of the fourth annual conference, 20:29820 (R;US)

Washington Univ., Seattle, WA (United States). Nuclear Physics Lab.
A beat frequency buncher, 20:30445 (R;US)
Terminal ion source for an FN tandem, 20:30284 (R;US)

Washington Univ., St. Louis, MO (United States)
Analysis and test results for a two-bladed, passive cycle pitch, horizontal-axis wind turbine in free and controlled yaw, 20:29425 (R;US)

Western Energy Co., Colstrip, MT (United States)
Advanced coal conversion process demonstration. Progress report, January 1, 1992–March 31, 1992, 20:28581 (R;US)

Westinghouse Electric Corp., Pittsburgh, PA (United States). Science and Technology Center
Integrated low emissions cleanup system for direct coal fueled turbines: (moving bed, fluid bed contactor/ceramic filter). Thirtieth quarterly report for the period January–March 1995, 20:28592 (R;US)
Tubular solid oxide fuel cell commercialization program, 20:29887 (R;US)

Westinghouse Hanford Co., Richland, WA (United States)
1995 solid waste 30-year container volume summary, 20:28993 (R;US)
222-S Laboratory Quality Assurance Plan. Revision 1, 20:30227 (R;US)
A human factors engineering evaluation of the Multi-Function Waste Tank Facility. Final report, 20:28994 (R;US)
A survey of United States Department of Energy access control, 20:29152 (R;US)
Assessment for potential radionuclide emissions from stacks and diffuse and fugitive sources on the Hanford Site, 20:30683 (R;US)
Comparison of NDA and DA measurement techniques for excess plutonium powders at the Hanford Site: Statistical design and heterogeneity testing, 20:29151 (R;US)

Description of waste pretreatment and interfacing systems dynamic simulation model, 20:28995 (R;US)
Engineering testing and technology projects FY 1996 Site Support Program Plan, WBS 6.3.3 and 6.3.8. Revision 1, 20:30329 (R;US)
Evaluation of chromium speciation and transport characteristics in the Hanford Site 100D and 100H areas, 20:30763 (R;US)
Groundwater maps of the Hanford Site, December 1994, 20:29035 (R;US)
Hanford Site Pollution Prevention Plan progress report, 1994. Revision 1, 20:28822 (R;US)
Information/records management-defensible budgets for the 21st century, 20:31412 (R;US)
International shipment of plutonium by air, 20:28784 (R;US)
K-Basins design guidelines, 20:29119 (R;US)
Modeling groundwater contamination transport for the Hanford Environmental Disposal Facility, 20:29036 (R;US)
Operational Environmental Monitoring Program Quality Assurance Project Plan, 20:28990 (R;US)
Packaging design criteria for the Type B Drum, 20:28785 (R;US)
Performance assessment for the disposal of low-level waste in the 200 West Area Burial Grounds, 20:28992 (R;US)
Project planning at the Hanford Site for International Atomic Energy Agency (IAEA) safeguards of excess fissile material, 20:29150 (R;US)
Quarterly environmental radiological survey summary: Second Quarter 1995 100, 200, 300, and 600 Areas, 20:30764 (R;US)
Quarterly report on the Ferrocyanide Safety Program for the period ending June 30, 1995, 20:28989 (R;US)
Test Plan: Phase 1, Hanford LLW melter tests, GTS Duratek, Inc., 20:28996 (R;US)
Type C investigation of electrical fabrication projects in ICF Kaiser shops, 20:29118 (R;US)
Westinghouse Hanford Company ALARA year-end report, Calendar Year 1994: Revision 3A, Radiological engineering and ALARA, 20:29120 (R;US)
Westinghouse Hanford Company operational environmental monitoring annual report, calendar year 1994, 20:28991 (R;US)

Westinghouse Savannah River Co., Aiken, SC (United States)
Approximate cylindrical blast theory: Application to pressure loading, 20:29004 (R;US)
AXAIR and PUFF-PLUME Comparison, 20:30684 (R;US)
Bentonite mat demonstration. Final report, 20:29001 (R;US)
Consolidated Incineration Facility waste burn test. Final report, 20:30356 (R;US)
Defense-in-depth evaluation for the New Waste Transfer Facility, 20:29121 (R;US)
Defining the Glass Composition Limits for SRS Contaminated Soils, 20:28998 (R;US)
Degradation of a N06690 borescope in a radioactive waste/glass melter system, 20:28999 (R;US)
Design Evaluation Process for Existing Waste Removal Design Documents, 20:29005 (R;US)
Engineering Model of Liquid Storage Utility Tank for Heat Transfer Analysis, 20:30348 (R;US)
Extending Fuzzy System Concepts for Control of a Vitrification Melter, 20:29000 (R;US)
Gamma weld-logging in burial ground of the Savannah River Site, 20:29006 (R;US)
H-Area, K-Area, and Par Pond Sewage Sludge Application Sites Groundwater Monitoring Report. Second quarter 1995, 20:30768 (R;US)
Land Use Baseline Report Savannah River Site, 20:30769 (R;US)
M-area hazardous waste management facility groundwater monitoring and corrective-action report, First quarter 1995, Volume 1, 20:29122 (R;US)
M-area hazardous waste management facility groundwater monitoring and corrective-action report, First quarter 1995, Volume 2, 20:29123 (R;US)
M-area hazardous waste management facility groundwater monitoring and corrective-action report, First quarter 1995, Volume 3, 20:29124 (R;US)
Microwave technology for waste management applications including disposition of electronic circuitry, 20:28997 (R;US)
Rapid assessment of soil and groundwater tritium by vegetation sampling, 20:30767 (R;US)
Replacement inhibitors for tank farm cooling coil systems, 20:29003 (R;US)

X-Form, Inc., Troy, NY (United States)
Production of reactive sintered nickel aluminide, 20:29998 (R;US)

Personal Author Index

Authors' surnames are indexed in the form appearing in the publication cited; given names generally have been reduced to initials. For documents with multiple authors, each author name is indexed. The entry for a primary author (first author listed on an abstracted document) includes the full document title and citation number. Entries for other authors provide a cross-reference to the primary author. Also included is information on the document type, country of publication, and the document language listed in parentheses in the format (J;FR;In French and English). Accent marks are not input because of computer alphabetization. Spelling and transliteration follow standard conventions.

Subject Index

This index is arranged by subject descriptors selected from those assigned to each citation in this publication. Subject descriptors are selected from a controlled thesaurus of terms, ETDE/PUB–2(Rev.1), *International Energy: Subject Thesaurus*. In order to enhance indexing, subject descriptor entries generally consist of a pair of descriptors: a main term and a qualifier term. Each entry includes the full title (which may be followed by supplementary descriptive information in parentheses) and the citation number. Additional information given in parentheses indicates the document type (an abbreviation such as B for book), the country of publication (such as DE for Federal Republic of Germany), and the language if non-English.

See references guide users from synonymous terms to the descriptors selected for the concept. *See also* references indicate subject concepts that are more specific than a particular descriptor. To gain complete subject coverage, all such terms should be reviewed.

The effect of structural defects in SiC particles on the static & dynamic mechanical response of a 15 volume percent SiC/6061-Al matrix composite, 20:30040 (R;US)

Compression Strength
The effect of structural defects in SiC particles on the static & dynamic mechanical response of a 15 volume percent SiC/6061-Al matrix composite, 20:30040 (R;US)

Corrosion Protection
Mechanically reliable scales and coatings, 20:30067 (RA;US)

Corrosion Resistance
ODS iron aluminides, 20:30066 (RA;US)

Cracks
Weldability of polycrystalline aluminides. Topical report, 20:30068 (R;US)

Creep
High-strength iron aluminide alloys, 20:30064 (RA;US)
ODS iron aluminides, 20:30066 (RA;US)

Ductility
Development of iron aluminides, 20:30063 (RA;US)

Elasticity
The effect of structural defects in SiC particles on the static & dynamic mechanical response of a 15 volume percent SiC/6061-Al matrix composite, 20:30040 (R;US)

Electronic Structure
NMR and NQR study of the thermodynamically stable quasicrystals, 20:31127 (R;US)

Experimental Data
The effect of structural defects in SiC particles on the static & dynamic mechanical response of a 15 volume percent SiC/6061-Al matrix composite, 20:30040 (R;US)

Fabrication
Production of reactive sintered nickel aluminide, 20:29998 (R;US)

Fracture Properties
The effect of structural defects in SiC particles on the static & dynamic mechanical response of a 15 volume percent SiC/6061-Al matrix composite, 20:30040 (R;US)

Grain Size
Development of iron aluminides, 20:30063 (RA;US)

Hot Pressing
Metallic and intermetallic-bonded ceramic composites, 20:30132 (RA;US)

Intermetallic Compounds
Measuring enthalpies of formation using thick multilayer foils and differential scanning calorimetry, 20:30080 (R;US)

Irradiation
Preliminary report on the irradiation conditions of the HFIR JP-23 experiment, 20:30003 (RA;US)

Magnetic Susceptibility
NMR and NQR study of the thermodynamically stable quasicrystals, 20:31127 (R;US)

Mechanical Properties
Low-aluminum content iron-aluminum alloys, 20:30065 (RA;US)
ODS iron aluminides, 20:29995 (R;US)
Precipitation-strengthening effects in iron-aluminides, 20:30072 (RA;US)
Welding and mechanical properties of cast FAPY (Fe-16 at. % Al-based) alloy slabs, 20:30069 (R;US)

Microstructure
Mechanically reliable scales and coatings, 20:30067 (RA;US)

Milling
ODS iron aluminides, 20:29995 (R;US)

Oxidation
ODS iron aluminides, 20:29995 (R;US)

Technology Transfer
Ni_3Al technology transfer, 20:30071 (RA;US)

Tensile Properties
The effect of structural defects in SiC particles on the static & dynamic mechanical response of a 15 volume percent SiC/6061-Al matrix composite, 20:30040 (R;US)

Ultimate Strength
The effect of structural defects in SiC particles on the static & dynamic mechanical response of a 15 volume percent SiC/6061-Al matrix composite, 20:30040 (R;US)

Weldability
Development of weldable, corrosion-resistant iron-aluminide alloys, 20:30070 (RA;US)

Welding
Low-aluminum content iron-aluminum alloys, 20:30065 (RA;US)

Young Modulus
The effect of structural defects in SiC particles on the static & dynamic mechanical response of a 15 volume percent SiC/6061-Al matrix composite, 20:30040 (R;US)

ALUMINIUM BASE ALLOYS
Correlation between shear punch and tensile data for neutron-irradiated aluminum alloys, 20:30004 (RA;US)
Microstructural evolution, oxidation and wear of Al-Cu-Fe quasicrystalline coatings, 20:30031 (R;US)
Microstructure and wear behavior of quasicrystalline thermal sprayed, 20:30032 (R;US)

ALUMINIUM NITRIDES
Development of oxidation/corrosion-resistant composite materials and interfaces, 20:30123 (RA;US)
ECR etching of group-III nitride binary and ternary films, 20:30144 (R;US)
Fabrication of aluminum nitride and its stability in liquid alkali metals, 20:30095 (RA;US)
Status of ion implantation doping and isolation of III-V nitrides, 20:30141 (R;US)

ALUMINIUM OXIDES
The effect of grain shape on strength variability of alumina ceramics, 20:30148 (R;US)

Catalytic Effects
Design of a high activity and selectivity alcohol catalyst. Final status report and summary of accomplishments, 20:28605 (R;US)

Chemical Vapor Deposition
Microwave and RF assisted chemical vapor infiltration, 20:30133 (RA;US)
Plasma synthesis of alumina films on metal and ceramic substrates, 20:30119 (R;US)

Deformation
Shock-wave properties of brittle solids, 20:30140 (R;US)
Deposition
Feasibility of synthesizing oxide films on ceramic and metal substrates. Final report, August 1994–May 1995, 20:30121 (R;US)
Oxide coating development, 20:30122 (RA;US)
Energy Beam Deposition
Plasma synthesis of alumina films on metal and ceramic substrates, 20:30119 (R;US)
Evaporation
Free-jet mass spectrometry of laser ablation plumes in thin film deposition, 20:30307 (RA;US)
Fabrication
Forced chemical vapor infiltration of tubular geometries: Modeling, design, and scale-up, 20:28676 (RA;US)
Synthesis and processing of composites by reactive metal penetration, 20:30134 (RA;US)
Hydrothermal Synthesis
Photo- and cathodoluminescence of hydrothermally synthesized $Y_3Al_5O_{12}$:Tb and $NaY(WO_4)_2$:Tb, 20:30146 (R;US)
Magnetic Flux
Thermal depinning of a single superconducting vortex, 20:30033 (R;US)
Mechanical Properties
Development of oxidation/corrosion-resistant composite materials and interfaces, 20:30123 (RA;US)
Oxide coating development, 20:30122 (RA;US)
Microstructure
Effect of irradiation spectrum on the microstructural evolution in ceramic insulators, 20:30097 (RA;US)
Oxidation
Development of oxidation/corrosion-resistant composite materials and interfaces, 20:30123 (RA;US)
Photoluminescence
Photo- and cathodoluminescence of hydrothermally synthesized $Y_3Al_5O_{12}$:Tb and $NaY(WO_4)_2$:Tb, 20:30146 (R;US)
Physical Radiation Effects
Effect of irradiation spectrum on the microstructural evolution in ceramic insulators, 20:30097 (RA;US)
Sintering
Metallic and intermetallic-bonded ceramic composites, 20:30132 (RA;US)
Sorptive Properties
Surfactant loss control in chemical flooding: Spectroscopic and calorimetric study of adsorption and precipitation on reservoir minerals. Quarterly progress report, April 1, 1995–June 30, 1995, 20:28690 (R;US)

BLADES (TURBINES)
See TURBINE BLADES

BLANKETS (BREEDING)
See BREEDING BLANKETS

BLAST FURNACES
Blast furnace granular coal injection project. Annual report, January–December 1994, 20:28577 (R;US)
Hydrothermally treated coals for pulverized coal injection. [Quarterly] technical progress report, January–March 1995, 20:28589 (R;US)

BLASTS
See EXPLOSIONS

BLOCKING LAYER
See DEPLETION LAYER

BLOOD COUNT
Biological dosimetry in human hematopoietic cells, 20:30828 (RA;JP;In Japanese)

BLOWERS
Wear and erosion prevention of rotating components in coal fired power plant using plasma spray method, 20:29434 (R;KR;In Korean)

BN-350 REACTOR
The use of waveguide acoustic probes for void fraction measurement in the evaporator of BN-350-Type reactor, 20:29635 (RA;US)

BNL
Future land use plan, 20:30687 (R;US)
Selected topics in particle accelerators: Proceedings of the CAP meetings. Volume 4, 20:30397 (R;US)

BOILERS
See also REFUSE-FUELED BOILERS
500 MW demonstration of advanced wall-fired combustion techniques for the reduction of nitrogen oxide emissions from coal-fired boilers, 20:28668 (R;US)
Development and testing of a high efficiency advanced coal combustor: Phase 3, Industrial boiler retrofit. Quarterly technical progress report No. 13, October 1, 1994–December 31, 1994, 20:28669 (R;US)
Development and testing of a high efficiency advanced coal combustor: Phase III, Industrial boiler retrofit. Quarterly technical progress report No. 14, January 1, 1995–March 31, 1995, 20:28670 (R;US)
Development of Optimal Boiler Controllers Based on Boiler Parameter Identification(I), 20:29426 (R;KR;In Korean)
Development of the Cuban bagasse boiler practice, 20:29310 (RA;US)
Removal of inorganic elements to improve biomass combustion properties, 20:29297 (RA;US)
The Development and Application of Digital Distributed Control System for Boiler in the Power Plant, 20:30355 (R;KR;In Korean)

BOILING
See also NUCLEATE BOILING
POOL BOILING
SUBCOOLED BOILING
TRANSITION BOILING
Nodal analysis of two-phase instabilities, 20:29451 (R;US)

BOILING WATER COOLED AND MODERATED REACTOR
See BWR TYPE REACTORS

BOLOMETERS
A rad-hard, steady state, digital imaging bolometer system for ITER, 20:31184 (R;US)

BOM-ERDA PROCESS
See DESULFURIZATION

BOMBS
Land mine detection using multispectral image fusion, 20:30580 (R;US)
Landmine detection and imaging using Micropower Impulse Radar (MIR), 20:30577 (R;US)

BONE JOINTS
Design of a substrate heater for calcium hydroxyapatite coating by pulsed laser ablation, 20:30811 (R;US)

BONNEVILLE POWER ADMINISTRATION
Report on audit of Bonneville Power Administration's energy resource programs, 20:29871 (R;US)

BOOSTERS (PARTICLE)
See PARTICLE BOOSTERS

BOR-60 REACTOR
Neutron flux spectra and radiation damage parameters for the Russian Bor-60 and SM-2 reactors, 20:29528 (RA;US)

BOREAL REGIONS
Survey on promotion of construction of the waste utilization energy system in the cold area, 20:29437 (R;JP;In Japanese)

BORESCOPES
Degradation of a N06690 borescope in a radioactive waste/glass melter system, 20:28999 (R;US)

BORON
Effect of ternary additions on the oxidation resistance of Ti_5Si_3, 20:30112 (R;US)
Numerical Boron mixing studies for Loviisa Nuclear Power Plant, 20:29770 (RA;US)
Oxidation and creep behavior of Mo*5*Si*3* based materials, 20:30114 (R;US)
Oxidation resistance and compressive creep behavior of boron doped Mo_5Si_3, 20:30111 (R;US)

BORON CARBIDES
Low-mass, intrinsically-hard high-temperature radiator. Final report, Phase I, 20:29489 (R;US)
Small bipolarons in boron carbides: Pair breaking in semiclassical hopping, 20:31103 (R;US)

Theoretical study of the structure and electronic properties of carbon and $B_XC_YN_Z$ nanotubes, 20:30171 (R;US)

BORON NITRIDES
Final report for the ORNL/3M CRADA No. ORNL91-0061 for the period January 1, 1992–December 31, 1992, 20:30105 (R;US)
Low-mass, intrinsically-hard high-temperature radiator. Final report, Phase I, 20:29489 (R;US)
Theoretical study of the structure and electronic properties of carbon and $B_XC_YN_Z$ nanotubes, 20:30171 (R;US)

BOROSILICATE GLASS
Formation of novel optical materials by ion implantation, 20:30163 (R;US)
Redox reaction and foaming in nuclear waste glass melting, 20:28929 (R;US)

BOROSILICATES
See BOROSILICATE GLASS

BOSONS
See also GLUONS
PHOTONS
An alternative prescription for gauging Floreanini-Jackiw chiral bosons, 20:30948 (IA;BR)
Non-anomalous bosonized theories from a gauge principle, 20:30951 (IA;BR)
Search for anomalous couplings in WW and WZ measurements at the Tevatron (D0 and CDF results), 20:30997 (R;US)

BOTTOM PARTICLES
See BEAUTY PARTICLES

BOTTOM QUARK MODEL
See FLAVOR MODEL

BOUNDARY LAYERS
Boundary layer turbulent transport and production/destruction of ozone during summertime smog episodes over the Swiss plateau, 20:30653 (R;DE)

CARBON DIOXIDE INJECTION
Post waterflood CO_2 miscible flood in light oil fluvial: Dominated deltaic reservoirs. Third quarterly report, April 1, 1995–June 30, 1995, 20:28697 (R;US)

CARBON FIBERS
A novel carbon fiber based porous carbon monolith, 20:30155 (R;US)
A novel carbon fiber based porous carbon monolith, 20:30175 (RA;US)
Advanced SiC composites for fusion applications, 20:30156 (RA;US)
Conversion of lignin into a precursor for the production of graphitic carbon materials, 20:29367 (RA;US)
Principles for structure analysis of carbon nanotubes by HRTEM, 20:30194 (R;AU)
Synthesis, characterization, and modeling of hydrogen storage in carbon aerogels, 20:30188 (R;US)

CARBON FLUORIDES
New flow boiling heat transfer correlation for CFC-114 and C_4F_{10}, 20:29906 (R;US)

CARBON MONOXIDE
Design of a high activity and selectivity alcohol catalyst. Final status report and summary of accomplishments, 20:28605 (R;US)
Freeze-out of carbon monoxide in calorimetry tests, 20:30601 (R;US)
Synthesis of acrylates and methacrlyates from coal-derived syngas. Quarterly technical progress report, January 1, 1995–March 31, 1995, 20:28625 (R;US)

CARBON NITRIDES
Crystalline and amorphous carbon nitride films produced by high-energy shock plasma deposition, 20:30151 (R;AU)

CARBON STEELS
See also STEEL-ASTM-A106
Aging mechanisms for steel components of high-level waste storage tanks, 20:28803 (R;US)
Engineered materials characterization report for the Yucca Mountain Site Characterization Project. Volume 2, Design data (Yucca Mountain Project), 20:28977 (R;US)
Engineered materials characterization report for the Yucca Mountain Site Characterization Project. Volume 1, Introduction, history, and current candidates, 20:28976 (R;US)
Statistical analysis of fatigue strain-life data for carbon and low-alloy steels, 20:29450 (R;US)

CARCINOGENS
Addressing model uncertainty in dose-response: The case of chloroform, 20:29605 (RA;US)
Toxicology profiles of chemical and radiological contaminants at Hanford, 20:29104 (R;US)

CARIBOU
See DEER

CARL STILL PROCESS
See DESULFURIZATION

CARPETBAG EVENT

Chemical Analysis
No decomposition in non-reducing atmospheres. Technical progress report, December 1994–February 1995, 20:28655 (R;US)

Chemical Preparation
Advance concepts for conversion of syngas to liquids. Quarterly report number 2, January 29–April 28, 1995, 20:28595 (R;US)
Advance concepts for conversion of syngas to liquids. Quarterly report, September 28, 1994–January 28, 1995, 20:28594 (R;US)
Development of vanadium-phosphate catalysts for methanol production by selective oxidation of methane. Quarterly technical progress report 8, January–March, 1995, 20:28741 (R;US)
Simultaneous SO_2/NO_x abatement using zeolite-supported copper. Progress report, October 1, 1993–September 30, 1994, 20:28645 (R;US)
Synthesis of acrylates and methacrlyates from coal-derived syngas. Quarterly technical progress report, January 1, 1995–March 31, 1995, 20:28625 (R;US)
Technology development for cobalt F-T catalysts. Quarterly technical progress report number 10, January 1–March 31, 1995, 20:28616 (R;US)
Technology development for iron Fischer-Tropsch catalysis. Quarterly technical progress report No. 2, January 1, 1995–March 31, 1995, 20:28624 (R;US)

Comparative Evaluations
Design of a high activity and selectivity alcohol catalyst. Final status report and summary of accomplishments, 20:28605 (R;US)
Potential production of hydrocarbons from the conversion of a wood-derived oil over some aluminophosphate catalysts, 20:29269 (RA;US)

Corrosion
Sealed tube comparisons of the compatibility of desiccants with refrigerants and lubricants. Final report, August 1993–January 1995, 20:29926 (R;US)

Crystal Structure
Advance concepts for conversion of syngas to liquids. Quarterly report number 2, January 29–April 28, 1995, 20:28595 (R;US)
Advance concepts for conversion of syngas to liquids. Quarterly report, September 28, 1994–January 28, 1995, 20:28594 (R;US)

Materials Recovery
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, November 9, 1992–February 8, 1993, 20:28600 (R;US)

Materials Testing
Characterization of three-way automotive catalysts, 20:30129 (RA;US)

Performance
Advance concepts for conversion of syngas to liquids. Quarterly report number 2, January 29–April 28, 1995, 20:28595 (R;US)
Moessbauer spectroscopy studies of iron-catalysts used in Fischer-Tropsch (FT) processes. Quarterly technical progress report, January–March, 1995, 20:28623 (R;US)
Moessbauer spectroscopy studies of iron-catalysts used in Fischer-Tropsch (FT) processes. Quarterly technical progress report, October–December, 1994, 20:28622 (R;US)
Novel bimetallic dispersed catalysts for temperature-programmed coal liquefaction. Technical progress report, January–March, 1995, 20:28617 (R;US)

Performance Testing
Catalysts and process development for two-stage liquefaction. First quarterly report, January 1, 1992–March 31, 1992, 20:28596 (R;US)
Catalysts and process developments for two-stage liquefaction. Second quarterly progress report, April 1, 1992–June 30, 1992, 20:28597 (R;US)
Development of vanadium-phosphate catalysts for methanol production by selective oxidation of methane. Quarterly technical progress report 8, January–March, 1995, 20:28741 (R;US)
Moessbauer spectroscopy studies of iron-catalysts used in Fischer-Tropsch (FT) processes. Quarterly technical progress report, July–September, 1994, 20:28621 (R;US)
Simultaneous SO_2/NO_x abatement using zeolite-supported copper. Progress report, October 1–December 31, 1993, 20:28646 (R;US)
Simultaneous SO_2/NO_x abatement using zeolite-supported copper. Progress report, October 1, 1993–September 30, 1994, 20:28645 (R;US)
Technology development for cobalt F-T catalysts. Quarterly technical progress report number 10, January 1–March 31, 1995, 20:28616 (R;US)

Phase Studies
Moessbauer spectroscopy studies of iron-catalysts used in Fischer-Tropsch (FT) processes. Quarterly technical progress report, April–June, 1994, 20:28620 (R;US)
Moessbauer spectroscopy studies of iron-catalysts used in Fischer-Tropsch (FT) processes. Quarterly technical progress report, July–September, 1994, 20:28621 (R;US)
Moessbauer spectroscopy studies of iron-catalysts used in Fischer-Tropsch (FT) processes. Quarterly technical progress report, January–March, 1995, 20:28623 (R;US)
Moessbauer spectroscopy studies of iron-catalysts used in Fischer-Tropsch (FT) processes. Quarterly technical progress report, October–December, 1994, 20:28622 (R;US)
Moessbauer spectroscopy studies of iron-catalysts used in Fischer-Tropsch (FT) processes. Quarterly technical progress report, January–March, 1994, 20:28619 (R;US)

Research Programs
Chemical Technology Division annual technical report, 1994, 20:29847 (R;US)

Surface Potential
Charge distribution analysis of catalysts under simulated reaction conditions. Technical progress report: Tenth quarter, January 1–March 31, 1995, 20:30231 (R;US)

Surface Properties
Advance concepts for conversion of syngas to liquids. Quarterly report number 2, January 29–April 28, 1995, 20:28595 (R;US)

Synthesis
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, February 9, 1993–May 8, 1993, 20:28598 (R;US)

CATALYTIC CONVERTERS
Characterization of three-way automotive catalysts, 20:30129 (RA;US)

CATALYTIC-IFP AMMONIA SCRUBBING PROCESS
See DESULFURIZATION

CATAPHORESIS
See ELECTROPHORESIS

CATHODES
Double pulse experiment with a velvet cathode on the ATA injector, 20:30624 (R;US)
Selected topics in particle accelerators: Proceedings of the CAP meetings. Volume 3, 20:30359 (R;US)

CAVITIES
Experimental analysis of natural convection in a cavity with relation 2:1., 20:30337 (I;MX;In Spanish)

CAVITY RESONATORS

ODS iron aluminides, 20:30066 (RA;US)

Creep
High-strength iron aluminide alloys, 20:30064 (RA;US)
ODS iron aluminides, 20:30066 (RA;US)

Density
Void structure and density change of vanadium-base alloys irradiated in the dynamic helium charging experiment, 20:30021 (RA;US)

Dislocations
Dislocation development in V-5CR-5TI and pure vanadium, 20:30013 (RA:US)

Ductile-Brittle Transitions
Ductile-brittle transition behavior of V-4Cr-4Ti irradiated in the dynamic helium charging experiment, 20:30020 (RA;US)

Ductility
Development of iron aluminides, 20:30063 (RA;US)

Electron Beam Welding
Welding development for V-Cr-Ti alloys, 20:30012 (RA;US)

Fabrication
Cr_2Nb-based alloy development, 20:30062 (RA;US)
Fabrication of 500-kg heat of V-4Cr-4Ti, 20:30015 (RA;US)

Fatigue
Fatigue behavior of unirradiated V-5Cr-5Ti, 20:30011 (RA;US)

Fracture Properties
Effect of heat treatment on microstructure and fracture toughness of a V-5Cr-5Ti alloy, 20:30014 (RA;US)
Vanadium alloy irradiation experiment X530 in EBR-II*, 20:30000 (RA;US)

Grain Size
Development of iron aluminides, 20:30063 (RA;US)

Hardness
Hardness recovery of 85% cold-worked V-Ti and V-Cr-Ti alloys upon annealing at 180°C to 1200°C, 20:30017 (RA;US)

Hydrogen Embrittlement
Chemical and mechanical interactions of interstitials in V-5%Cr-5%Ti, 20:30010 (RA;US)

Impact Strength
Impact properties of 500-kg heat of V-4Cr-4Ti, 20:30016 (RA;US)
Interstitial Helium Generation
Effect of dynamically charged helium on tensile properties of V-4Cr-4Ti, 20:30019 (RA;US)
U.S. Contribution 1994 Summary Report Task T12: Compatibility and irradiation testing of vanadium alloys, 20:29993 (R;US)
Void structure and density change of vanadium-base alloys irradiated in the dynamic helium charging experiment, 20:30021 (RA;US)
Mechanical Properties
Cr_2Nb-based alloy development, 20:30062 (RA;US)
Low-aluminum content iron-aluminum alloys, 20:30065 (RA;US)
ODS iron aluminides, 20:29995 (R;US)
Superior metallic alloys through rapid solidification processing (RSP) by design, 20:30073 (RA;US)
Microstructure
Chemical compatibility of structural materials in alkali metals, 20:30023 (RA;US)
Cr_2Nb-based alloy development, 20:30062 (RA;US)
Effect of heat treatment on microstructure and fracture toughness of a V-5Cr-5Ti alloy, 20:30014 (RA;US)
Hardness recovery of 85% cold-worked V-Ti and V-Cr-Ti alloys upon annealing at 180°C to 1200°C, 20:30017 (RA;US)
Mechanically reliable scales and coatings, 20:30067 (RA;US)
Void structure and density change of vanadium-base alloys irradiated in the dynamic helium charging experiment, 20:30021 (RA;US)
Milling
ODS iron aluminides, 20:29995 (R;US)
Oxidation
Chemical and mechanical interactions of interstitials in V-5%Cr-5%Ti, 20:30010 (RA;US)
Effect of oxidation on tensile behavior of V-5Cr-5Ti alloy, 20:30018 (RA;US)
ODS iron aluminides, 20:29995 (R;US)
Phase Transformations
Modeling phase transformations in ternary systems: Ferrite dissolution during continuous cooling, 20:29997 (R;US)
Physical Properties
U.S. Contribution 1994 Summary Report Task T12: Compatibility and irradiation testing of vanadium alloys, 20:29993 (R;US)
Physical Radiation Effects
Vanadium alloy irradiation experiment X530 in EBR-II*, 20:30000 (RA;US)
Solidification
Superior metallic alloys through rapid solidification processing (RSP) by design, 20:30073 (RA;US)
Temperature Dependence
Fatigue behavior of unirradiated V-5Cr-5Ti, 20:30011 (RA;US)
Tensile Properties
Chemical and mechanical interactions of interstitials in V-5%Cr-5%Ti, 20:30010 (RA;US)
Dislocation development in V-5CR-5TI and pure vanadium, 20:30013 (RA;US)
Effect of dynamically charged helium on tensile properties of V-4Cr-4Ti, 20:30019 (RA;US)
Effect of oxidation on tensile behavior of V-5Cr-5Ti alloy, 20:30018 (RA;US)
Welding
Low-aluminum content iron-aluminum alloys, 20:30065 (RA;US)

CHROMIUM OXIDES
Feasibility of synthesizing oxide films on ceramic and metal substrates. Final report, August 1994–May 1995, 20:30121 (R;US)
Plasma synthesis of alumina films on metal and ceramic substrates, 20:30119 (R;US)

CHROMODYNAMICS
See QUANTUM CHROMODYNAMICS

CHROMOSOMAL ABERRATIONS
Dose estimation by chromosome analysis, 20:30829 (RA;JP;In Japanese)

CHROMOSOME ABERRATIONS

CMPO
Extraction of nitric acid, uranyl nitrate, and bismuth nitrate from aqueous nitric acid solutions with CMPO, 20:28907 (R;US)
CO-GENERATION
See COGENERATION
CO2 FLOODING
See CARBON DIOXIDE INJECTION
COAGULATION (COLLOID)
See FLOCCULATION
COAL
See also COAL FINES
SUBBITUMINOUS COAL
Briquetting
Biomass in clean coal production, 20:29272 (RA;US)
Chemical Composition
Coal plasticity at high heating rates and temperatures. Final technical progress report, 20:28637 (R;US)
Cleaning
Bench-scale testing of the multi-gravity separator in combination with microcel. Final report, 20:28583 (R;US)
Cocombustion
AFBC co-firing of coal and hospital waste. Quarterly progress report, November 1, 1994–January 31, 1995, 20:28663 (R;US)
Combustion
500 MW demonstration of advanced wall-fired combustion techniques for the reduction of nitrogen oxide emissions from coal-fired boilers, 20:28668 (R;US)
Blast furnace granular coal injection project. Annual report, January–December 1994, 20:28577 (R;US)
Development and testing of a high efficiency advanced coal combustor: Phase 3, Industrial boiler retrofit. Quarterly technical progress report No. 13, October 1, 1994–December 31, 1994, 20:28669 (R;US)
Forced chemical vapor infiltration of tubular geometries: Modeling, design, and scale-up, 20:28676 (RA;US)
Fundamental study of ash formation and deposition: Effect of reducing stoichiometry. Quarterly Report No. 8, January 1, 1995–March 31, 1995, 20:28672 (R;US)
Coprocessing
Characterization of coal/waste coprocessing samples from HRI Run POC-2, 20:28591 (R;US)
Desulfurization
Advanced coal conversion process demonstration. Progress report, January 1, 1992–March 31, 1992, 20:28581 (R;US)
Advanced coal conversion process demonstration. Progress report, January 1, 1992–December 31, 1992, 20:28580 (R;US)
Controlling incipient oxidation of pyrite for improved rejection. Eighth quarterly technical progress report, July 1, 1994–September 30, 1994, 20:28587 (R;US)
Molten-Caustic-Leaching (Gravimelt) System Integration Project. Quarterly report, July–September 1989, 20:28611 (R;US)
Drying
Advanced coal conversion process demonstration. Progress report, January 1, 1992–March 31, 1992, 20:28581 (R;US)
Advanced coal conversion process demonstration. Progress report, January 1, 1992–December 31, 1992, 20:28580 (R;US)
Flotation
Controlling incipient oxidation of pyrite for improved rejection. Technical progress report for the ninth quarter, October 1–December 31, 1994, 20:28586 (R;US)
Fluidized-Bed Combustion
A study of hazardous air pollutants at the Tidd PFBC Demonstration Plant, 20:29447 (R;US)
AFBC co-firing of coal and hospital waste. Quarterly progress report, November 1, 1994–January 31, 1995, 20:28663 (R;US)
Reduction of NO and SO_2 in two-stage fluidized shallow bed coal combustor (100 kW_{th}), 20:28674 (RA;CH)
TIDD PFBC demonstration project. Quarterly report, January–March 1995, 20:28662 (R;US)
Grinding
Blast furnace granular coal injection project. Annual report, January–December 1994, 20:28577 (R;US)
Ignition
A distributed activation energy model of heterogeneous coal ignition. Technical progress report, January 1–March 31, 1995, 20:28665 (R;US)
A distributed activation energy model of heterogeneous coal ignition. Technical progress report, April 1– June 30, 1995, 20:28666 (R;US)
Leaching
Gravimelt Process (Molten-Caustic-Leaching). Quarterly report, January–March 1989, 20:28610 (R;US)
MCL (Gravimelt) System Integration Project. Quarterly report, January–March 1988, 20:28608 (R;US)
MCL (Gravimelt) System Integration Project. Quarterly report, October–December 1988, 20:28609 (R;US)
Meetings
Eleventh annual coal preparation, utilization, and environmental control contractors conference: Proceedings, 20:28576 (R;US)
Mixtures
Biomass in clean coal production, 20:29272 (RA;US)
Plasticity
Coal plasticity at high heating rates and temperatures. Final technical progress report, 20:28637 (R;US)
Staged Combustion
Evaluation of gas reburning and low NO_x burners on a wall-fired boiler, 20:28649 (R;US)
Evaluation of gas reburning and low NO_x burners on a wall-fired boiler, 20:29443 (R;US)
Structural Chemical Analysis
Temperature effects on chemical structure and motion in coal. Quarterly report, April–June, 1995, 20:28643 (R;US)
Sulfur Content
Molten-Caustic-Leaching (Gravimelt) System Integration Project. Quarterly report, July–September 1989, 20:28611 (R;US)
Surface Properties
Sorption and chemical transformation of PAHs on coal fly ash. Final technical report, 20:28671 (R;US)
COAL DEPOSITS
Development and utilization strategies for recovery and utilization of coal mine methane, 20:28738 (RA;US)
Integrated exploration strategy for locating areas capable of high gas rate cavity completion in coalbed methane reservoirs, 20:28737 (RA;US)
Recent federal initiatives to promote unconventional gas: High octane delivery of just hot air?, 20:28739 (RA;US)
COAL FINES
Development and testing of a high efficiency advanced coal combustor: Phase III, Industrial boiler retrofit. Quarterly technical progress report No. 14, January 1, 1995–March 31, 1995, 20:28670 (R;US)
Engineering development of advanced physical fine coal cleaning for premium fuel applications. Quarterly progress report No. 10, January–March 1995, 20:28584 (R;US)
Evaluation of hyperbaric filtration for fine coal dewatering. Tenth quarterly technical progress report, January 1, 1995–March 31, 1995, 20:28588 (R;US)
Pelletization of fine coals. Final report, 20:28582 (R;US)
COAL GAS
Method for reducing sulfate formation during regeneration of hot-gas desulfurization sorbents, 20:28634 (PA;US)
COAL GASIFICATION
An Experimental study on the Coal Gasifier and Purification system for IGCC Plant, 20:28629 (R;KR;In Korean)
Fundamental bioprocessing research for coal applications, 20:28631 (RA;US)
High temperature electrochemical polishing of H_2S from coal gasification process stream. Quarterly progress report, January 1, 1995–March 31, 1995, 20:28626 (R;US)
COAL GASIFICATION PLANTS
Carbon formation and metal dusting in hot-gas cleanup systems of coal gasifiers, 20:28630 (RA;US)

COAL LIQUEFACTION
See also TSL PROCESS
A characterization and evaluation of coal liquefaction process streams. Status assessment, 20:28641 (R;US)
Advanced progress concepts for direct coal liquefaction, 20:28635 (R;US)
Catalytic multi-stage liquefaction of coal. Tenth quarterly report, January 1–March 31, 1995, 20:28618 (R;US)
Characterization of coal/waste coprocessing samples from HRI Run POC-2, 20:28591 (R;US)
Fine particle clay catalysts for coal liquefaction. Final technical report, 20:28604 (R;US)
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, November 9, 1992–February 8, 1993, 20:28600 (R;US)
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, May 9, 1992–August 8, 1992, 20:28601 (R;US)
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, February 9, 1993–May 8, 1993, 20:28598 (R;US)
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, February 9, 1992–May 8, 1992, 20:28602 (R;US)
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, May 8, 1993–August 8, 1993, 20:28599 (R;US)
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, November 9, 1991–February 8, 1992, 20:28603 (R;US)
Fundamental bioprocessing research for coal applications, 20:28631 (RA;US)
Intermolecula transfer and elimination of molecular hydrogen in thermal reactions of unsaturated organic compounds, 20:28628 (R;US)
Novel bimetallic dispersed catalysts for temperature-programmed coal liquefaction. Technical progress report, January–March, 1995, 20:28617 (R;US)
Synthesis and characterization of Fe colloid catalysts in inverse micelle solutions, 20:28636 (R;US)
The role of recycle oil in direct coal liquefaction process development, 20:28590 (R;US)
Thermodynamic and rheological properties of solid-liquid systems in coal processing, 20:28613 (R;US)
Thermodynamic and rheological properties of solid-liquid systems in coal processing. Quarterly technical report, October 1–December 31, 1994, 20:28612 (R;US)

COAL LIQUEFACTION PLANTS
Participation in the 2.5 t/d British Coal (BCC) liquefaction pilot plant project Point of Ayr. Final report, 20:28627 (R;DE;In German)

COAL LIQUIDS
A characterization and evaluation of coal liquefaction process streams. Status assessment, 20:28641 (R;US)
Catalytic multi-stage liquefaction of coal. Tenth quarterly report, January 1–March 31, 1995, 20:28618 (R;US)
Hindered diffusion of coal liquids. Quarterly report No. 10, December 18, 1994–March 17, 1995, 20:28638 (R;US)
Molecular catalytic coal liquid conversion. Quarterly report, 20:28607 (R;US)
Molecular catalytic coal liquid conversion. Quarterly report, [October–December 1994], 20:28606 (R;US)
Thermodynamic and rheological properties of solid-liquid systems in coal processing. Quarterly technical report, October 1–December 31, 1994, 20:28612 (R;US)
Thermodynamic and rheological properties of solid-liquid systems in coal processing, 20:28613 (R;US)
Thermodynamic and rheological properties of solid-liquid systems in coal processing. Quarterly technical report, October 1–December 31, 1994, 20:28612 (R;US)

COAL MINES
Investigation of the use of fly-ash based autoclaved cellular concrete blocks in coal mines for air duct work. Final report, January 25, 1993–December 31, 1994, 20:28657 (R;US)

COAL PREPARATION
Biomass in clean coal production, 20:29272 (RA;US)
Effect of coal beneficiation process on rheology/atomization of coal water slurries. Quarterly progress report, April 1, 1995–June 30, 1995, 20:28579 (R;US)
Effect of coal beneficiation process on rheology/atomization of coal water slurries. Quarterly progress report, November 1, 1994–January 31, 1995, 20:28578 (R;US)
Eleventh annual coal preparation, utilization, and environmental control contractors conference: Proceedings, 20:28576 (R;US)
Engineering development of advanced physical fine coal cleaning for premium fuel applications. Quarterly progress report No. 10, January–March 1995, 20:28584 (R;US)

COAL PREPARATION PLANTS
Advanced coal conversion process demonstration. Progress report, January 1, 1992–March 31, 1992, 20:28581 (R;US)
Advanced coal conversion process demonstration. Progress report, January 1, 1992–December 31, 1992, 20:28580 (R;US)
Blast furnace granular coal injection project. Annual report, January–December 1994, 20:28577 (R;US)

COAL TAR
Vapor pressures and heats of vaporization of primary coal tars. Quarterly technical progress report, 1 January 1995–31 March 1995, 20:28639 (R;US)

COAL TAR OILS
Vapor pressures and heats of vaporization of primary coal tars. Quarterly technical progress report, April 1–June 30, 1995, 20:28640 (R;US)

FIXED BED
See PACKED BEDS

FLAME CHAMBER PROCESS
See WASTE PROCESSING

FLAME SPRAYING
Computational fluid dynamic analysis of a High-Velocity Oxygen-Fuel (HVOF) thermal spray torch, 20:30343 (R;US)

FLAMES
A study of sampling phenomena in a probe nozzle for high temperature MBMS, 20:30273 (RA;US)
CARS temperature measurements in laminar and turbulent high pressure flames, 20:30878 (RA;CH)
Investigation of Flame Structures Temperature and Heat Flux Measurements, 20:28675 (R;KR;In Korean)
MBMS and gas phase chromatography studies of n-heptane and iso-octane flames, 20:30258 (RA;US)
Mass discrimination effects in MBMS study of rich premixed flames, 20:30270 (RA;US)
Mass specrometry as an efficient tool for kinetic studies in flames, 20:30261 (RA;US)
Molecular beam/mass spectrometric and modeling studies of CF_3Br inhibited flames, 20:30264 (RA;US)
Obtaining kinetics from MBMS and modeling of propene flame structure, 20:30262 (RA;US)
Study of solid propellant flame structure by mass-spectrometric sampling, including MBMS, 20:30271 (RA;US)

FLAMMABILITY
Methods development for measuring and classifying flammability/combustibility of refrigerants. Final report, 20:30349 (R;US)

FLASKS
See CASKS

FLAVOR MODEL
Search for the top quark at D0 using multivariate methods, 20:31024 (R;US)

FLAWS
See DEFECTS

FLINTLOCK OPERATION
See NUCLEAR EXPLOSIONS
UNDERGROUND EXPLOSIONS

FLOCCULATION
Evaluation of coagulant aids at high pH, 20:28902 (R;US)

FLOODS
Natural phenomena hazards evaluation of concrete silos 1, 2, 3 and 4 at Fernald, Ohio, 20:29025 (R;US)

FLORIDA
Clean coal technology project to Polk Power Station, Tampa Electric Company, Florida, Volume 1: Report, 20:28658 (R;US)
Clean coal technology project to Polk Power Station, Tampa Electric Company, Florida. Final report, Volume II: Report and appendices, 20:28659 (R;US)

FLOTATION
Bench-scale testing of the multi-gravity separator in combination with microcel. Final report, 20:28583 (R;US)

FLOW (FLUID)
See FLUID FLOW

FLOW MODELS
Semi-Lagrangian shallow water modeling on the CM-5, 20:30894 (R;US)
The multi-dimensional module of CATHARE 2 description and application, 20:29648 (RA;US)

FLUE GAS
10-MW demonstration of the gas suspension absorption process at TVA's Center for Emissions Research. Final report, 20:29442 (R;US)
Advanced bioreactor systems for gaseous substrates: Conversion of synthesis gas to liquid fuels and removal of SO_x and NO_x from coal combustion gases, 20:28632 (RA;US)
Commercial demonstration of the NOXSO SO_2/NO_x removal flue gas cleanup system, 20:29446 (R;US)
Direct catalytic decomposition of nitric oxide. Final report, 20:28650 (R;US)
Evaluation of gas reburning and low NO_x burners on a wall-fired boiler, 20:28649 (R;US)
Evaluation of gas reburning and low NO_x burners on a wall-fired boiler, 20:29443 (R;US)
High efficiency SO_2 removal testing. Quarterly report, 1 January–31 March 1995, 20:29444 (R;US)
Innovative clean coal technology (ICCT): Demonstration of selective catalytic reduction (SCR) technology for the control of nitrogen oxide (NO_x) emissions from high-sulfur coal-fired boilers. Fourth quarterly progress report, 20:28648 (R;US)
Low-emission vortex combustion of biomass and fossil fuel, 20:29296 (RA;US)

Computer Codes
A compendium of fracture flow models, 1994, 20:30686 (R;US)

Computerized Simulation
A graphical interface to the TOUGH family of flow simulators, 20:31356 (RA;US)
A new lumped-parameter approach to simulating flow processes in unsaturated dual-porosity media, 20:30734 (RA;US)
Application of TOUGH to hydrologic problems related to the unsaturated zone site investigation at Yucca Mountain, Nevada, 20:28899 (RA;US)
Computational fluid dynamics simulation of high-temperature solar chemical reactors, 20:29403 (RA;CH)
Drift-scale thermo-hydrologic analyses for the proposed repository at Yucca Mountain, NV, 20:28895 (RA;US)
ITOUGH2: Solving TOUGH inverse problems, 20:30735 (RA;US)
LNAPL infiltration in the vadose zone: Comparisons of physical and numerical simulations, 20:30725 (RA;US)
Modeling of hydrothermal circulation applied to active volcanic areas. The case of Vulcano (Italy), 20:29408 (RA;US)
Modeling the response of the geothermal system at Lihir Island, Papua New Guinea to mine dewatering, 20:29411 (RA;US)
Numerical determination of lateral loss coefficients for subchannel analysis in nuclear fuel bundles, 20:29757 (RA;US)
Numerical simulation of in-situ DNAPL remediation by alcohol flooding, 20:30728 (RA;US)
Parametric analysis of a TOUGH2 model for the unsaturated zone at Yucca Mountain (Yucca Mountain Project), 20:29030 (RA;US)
Prognostic simulation of reinjection-research project geothermal site Neustadt-Glewe/Germany, 20:29407 (RA;US)
Some thermohydraulics of closure head adapters in a 3 loops PWR, 20:29739 (RA;US)
Triple-porosity/permeability flow in faulted geothermal reservoirs: Two-dimensional effects, 20:29409 (RA;US)
Using simulation-optimization techniques to improve multiphase aquifer remediation, 20:30726 (RA;US)
Vapor pressure lowering effects due to salinity and suction pressure in the depletion of vapor-dominated geothermal reservoirs, 20:29419 (RA;US)

Flow Models
Simulation of the Heber geothermal field, a TOUGH2/PC application, 20:29421 (RA;US)

Mathematical Models
A reduced grid model for shallow flows on the sphere, 20:30661 (R;US)
Analysis of steady-state flow and advective transport in the Eastern Snake River Plain Aquifer System, Idaho, 20:30700 (R;US)
Simulation of flow in the unsaturated zone beneath Pagany Wash, Yucca Mountain, 20:29012 (R;US)

S Codes
Modeling self-potential data in the Abraham and Meadow-Hatton geothermal systems: The search for upflow zones, 20:29413 (R;US)

FLUID MECHANICS
See also HYDRAULICS
HYDRODYNAMICS
Alternative algorithms for computational fluid dynamics. Final report, 20:30906 (R;US)
HYDRA, A finite element computational fluid dynamics code: User manual, 20:30347 (R;US)

FLUIDIZED BED REFUSE GASIFICATION
Constructive features, operation and sizing of fluidized bed gasifiers for biomass, 20:29259 (RA;US)

FLUIDIZED-BED COMBUSTION
Circulating Fluidized Bed Combustion of Korean Anthracite, 20:29436 (R;KR;In Korean)
Circulating fluidized bed tehnology in biomass combustion-performance, advances and experiences, 20:29293 (RA;US)
Erosion and Heat Transfer Characteristics of a Finned Horizontal Tube in a FBC, 20:30338 (R;KR;In Korean)
Integrated low emissions cleanup system for direct coal fueled turbines: (moving bed, fluid bed contactor/ceramic filter). Thirtieth quarterly report for the period January–March 1995, 20:28592 (R;US)
TIDD PFBC demonstration project. Quarterly report, January–March 1995, 20:28662 (R;US)
The layer-flame method of bark burning, 20:29299 (RA;US)

FLUIDIZED-BED COMBUSTORS
Pilot Plant results with Inclined Fluidized Bed technology, 20:29294 (RA;US)

FLUIDS
See also DRILLING FLUIDS
GASES
LIQUIDS
Computational fluid dynamic analysis of a closure head penetration in a pressurized water reactor, 20:29644 (RA;US)
Hydrodynamically driven two-phase flow, a theory of hydrodynamically driven dynamic mix, 20:30339 (R;US)
Mass dependence of self-diffusion in isotopic fluids, 20:30883 (R;XA)
Measurement of the interaction between the flow and the free surface of a liquid, 20:29634 (RA;US)
Spectral analysis of the turbulent mixing of two fluids, 20:30340 (R;US)

Computerized Simulation
Diomres (k,m): An efficient method based on Krylov subspaces to solve big, dispersed, unsymmetrical linear systems, 20:31361 (RA;US)
Experiences using multigrid for geothermal simulation, 20:31360 (RA;US)

Flow Models
Coupling of the reservoir simulator TOUGH and the wellbore simulator WFSA, 20:29420 (RA;US)
Diomres (k,m): An efficient method based on Krylov subspaces to solve big, dispersed, unsymmetrical linear systems, 20:31361 (RA;US)
Experiences using multigrid for geothermal simulation, 20:31360 (RA;US)
Modeling the response of the geothermal system at Lihir Island, Papua New Guinea to mine dewatering, 20:29411 (RA;US)
Triple-porosity/permeability flow in faulted geothermal reservoirs: Two-dimensional effects, 20:29409 (RA;US)

Fluid Flow
Numerical simulation of carbon dioxide effects in geothermal reservoirs, 20:29410 (RA;US)

Fluid Withdrawal
Prognostic simulation of reinjection-research project geothermal site Neustadt-Glewe/Germany, 20:29407 (RA;US)

Geologic Structures
Precision gravity exploration in Shiratori region, No.C-1 report on the survey of geothermal structure, the ground survey of geothermal development promotion in fiscal 1992, 20:29416 (R;JP;In Japanese)

Geothermal Energy
Precision gravity exploration in Shiratori region, No.C-1 report on the survey of geothermal structure, the ground survey of geothermal development promotion in fiscal 1992, 20:29416 (R;JP;In Japanese)

Gravity Surveys
Precision gravity exploration in Shiratori region, No.C-1 report on the survey of geothermal structure, the ground survey of geothermal development promotion in fiscal 1992, 20:29416 (R;JP;In Japanese)

Hydrology
Coupling of the reservoir simulator TOUGH and the wellbore simulator WFSA, 20:29420 (RA;US)
Modeling self-potential data in the Abraham and Meadow-Hatton geothermal systems: The search for upflow zones, 20:29413 (R;US)
Vapor pressure lowering effects due to salinity and suction pressure in the depletion of vapor-dominated geothermal reservoirs, 20:29419 (RA;US)

Mathematical Models
Simulation of the Heber geothermal field, a TOUGH2/PC application, 20:29421 (RA;US)

Permeability
Triple-porosity/permeability flow in faulted geothermal reservoirs: Two-dimensional effects, 20:29409 (RA;US)

Reservoir Engineering
Prognostic simulation of reinjection-research project geothermal site Neustadt-Glewe/Germany, 20:29407 (RA;US)
Vapor pressure lowering effects due to salinity and suction pressure in the depletion of vapor-dominated geothermal reservoirs, 20:29419 (RA;US)

Sampling
Geothermal areas as analogues to chemical processes in the near-field and altered zone of the potential Yucca Mountain, Nevada repository, 20:28979 (R;US)

Thermodynamic Model
Numerical simulation of carbon dioxide effects in geothermal reservoirs, 20:29410 (RA;US)

Thermodynamics
Prognostic simulation of reinjection-research project geothermal site Neustadt-Glewe/Germany, 20:29407 (RA;US)

Vapor Pressure
Vapor pressure lowering effects due to salinity and suction pressure in the depletion of vapor-dominated geothermal reservoirs, 20:29419 (RA;US)

Water Removal
Modeling the response of the geothermal system at Lihir Island, Papua New Guinea to mine dewatering, 20:29411 (RA;US)

GEOTHERMAL WELLS
Numerical simulation of carbon dioxide effects in geothermal reservoirs, 20:29410 (RA;US)

A repository released-dose model for the evaluation of long-lived fission product transmutation effectiveness, 20:30721 (R;US)
Analysis of steady-state flow and advective transport in the Eastern Snake River Plain Aquifer System, Idaho, 20:30700 (R;US)
Environmental geochemistry for surface and subsurface waters in the Pajarito Plateau and outlying areas, New Mexico, 20:30717 (R;US)
Exposure assessment of groundwater transport of tritium from the Shoal Site, 20:30702 (R;US)
Hydrochemistry and hydrogeologic conditions within the Hanford Site upper basalt confined aquifer system, 20:30747 (R;US)
Modeling groundwater contamination transport for the Hanford Environmental Disposal Facility, 20:29036 (R;US)
Rapid assessment of soil and groundwater tritium by vegetation sampling, 20:30767 (R;US)

Remedial Action
100-HR-3 Operable Unit focused feasibility study, 20:29081 (R;US)
100-KR-4 Operable Unit focused feasibility study, 20:29080 (R;US)
Baseline risk assessment of ground water contamination at the uranium mill tailings site near Salt Lake City, Utah. Revision 1, 20:29060 (R;US)
Baseline risk assessment of ground water contamination at the uranium mill tailings sites near Rifle, Colorado. Revision 1, 20:29063 (R;US)
Baseline risk assessment of ground water contamination at the uranium mill tailings site near Durango, Colorado. Revision 1, 20:29062 (R;US)
Baseline risk assessment of ground water contamination at the uranium mill tailings site near Riverton, Wyoming. Revision 1, 20:29051 (R;US)
Chromium removal from ground water by Ion exchange resins, 20:30752 (RA;US)
Cometabolic bioreactor demonstration at the Oak Ridge K-25 Site: Final report, 20:29102 (R;US)
Hydrostratigraphic analysis - The key to cost-effective ground water cleanup at Lawrence Livermore National Laboratory, 20:29117 (R;US)
Laboratory treatability studies preparatory to field testing a resting-cell in situ microbial filter bioremediation strategy, 20:30757 (R;US)
M-area hazardous waste management facility groundwater monitoring and corrective-action report, First quarter 1995, Volume 2, 20:29123 (R;US)
M-area hazardous waste management facility groundwater monitoring and corrective-action report, First quarter 1995, Volume 3, 20:29124 (R;US)
M-area hazardous waste management facility groundwater monitoring and corrective-action report, First quarter 1995, Volume 1, 20:29122 (R;US)
Natural and accelerated bioremediation research program plan, 20:29072 (R;US)

Sampling
Calendar Year 1994 Groundwater Quality Report for the Bear Creek Hydrogeologic Regime Y-12 Plant, Oak Ridge, Tennessee, 20:29125 (R;US)
Calendar year 1994 groundwater quality report for the Chestnut Ridge Hydrogeologic Regime, Y-12 Plant, Oak Ridge, Tennessee. 1994 groundwater quality data and calculated rate of contaminant migration, 20:29008 (R;US)
Evaluation of micropurging versus traditional groundwater sampling at the Department of Energy's Kansas City Plant, 20:30716 (R;US)
Radionuclides, stable isotopes, inorganic constituents, and organic compounds in water from selected wells and springs from the southern boundary of the Idaho National Engineering Laboratory to the Hagerman Area, Idaho, 1993, 20:30699 (R;US)
Supplement to the UMTRA Project water sampling and analysis plan, Maybell, Colorado, 20:30629 (R;US)
Supplement to the UMTRA Project water sampling and analysis plan, Mexican Hat, Utah, 20:29056 (R;US)

Supplement to the UMTRA Project water sampling and analysis plan, Monument Valley, Arizona, 20:29058 (R;US)
Supplement to the UMTRA Project water sampling and analysis plan, Riverton, Wyoming, 20:30628 (R;US)
Supplement to the UMTRA project water sampling and analysis plan, Slick Rock, Colorado, 20:30630 (R;US)
UMTRA Project water sampling and analysis plan, Canonsburg, Pennsylvania. Revision 1, 20:30627 (R;US)
UMTRA project water sampling and analysis plan, Falls City, Texas. Revision 1, 20:29055 (R;US)
UMTRA project water sampling and analysis plan, Naturita, Colorado. Revision 1, 20:29057 (R;US)

Standardized Terminology
Groundwater, A century of word evolution, 20:31407 (R;US)

Water Chemistry
A study of the relationship of geological formation to the NORM. Quarterly technical progress report, April 1–June 30, 1995, 20:28751 (R;US)

Water Pollution
Removing hexavalent chromium from subsurface waters with anion-exchange resin, 20:30750 (R;US)

Water Quality
Comment and response document for the ground water protection strategy for the Uranium Mill Tailings Site at Green River, Utah, 20:29064 (R;US)
Evaluation of micropurging versus traditional groundwater sampling at the Department of Energy's Kansas City Plant, 20:30716 (R;US)
Ground water protection strategy for the Uranium Mill Tailings Site at Green River, Utah. Final, Revision 2, Version 5: Appendix E to the remedial action plan and site design for stabilization of the inactive uranium mill tailings site at Green River, Utah, 20:29071 (R;US)
Nitrate losses from fertilised short rotation willow - a preliminary evaluation of two years data, 20:29214 (RA;US)
Remedial Action Plan and Site Design for stabilization of the inactive Uranium Mill Tailings sites at Slick Rock, Colorado: Appendix C to Attachment 3, Calculations. Final, 20:29045 (R;US)

GROUND-WATER RESERVES
See AQUIFERS

GROUTING
A field test of permeation grouting in heterogeneous soils using a new generation of barrier liquids, 20:30738 (R;US)

HANFORD PRODUCTION REACTORS
100 Area Source Operable Unit focused feasibility study. Volume 2, 20:29014 (R;US)
200-ZP-1 Operable Unit Treatability Test Report, 20:29023 (R;US)
Neutron Beam Facility technical report, 20:29529 (R;US)
Proposed plan for interim remedial measure at the 100-HR-3 Operable Unit, 20:29018 (R;US)
Proposed plan for interim remedial measure at the 100-HR-3 Operable Unit. Revision 1, 20:29019 (R;US)
Proposed plan for interim remedial measures at the 100-BC-1 Operable Units, 20:29015 (R;US)
Proposed plan for interim remedial measures at the 100-DR-1 Operable Unit, 20:29016 (R;US)
Proposed plan for interim remedial measures at the 100-HR-1 Operable Unit. Revision 1, 20:29017 (R;US)
Proposed plan for the 100-IU-1, 100-IU-3, 100-IU-4, AND 100-IU-5 Operable Units, 20:29024 (R;US)

HANFORD RESERVATION
International shipment of plutonium by air, 20:28784 (R;US)

Environmental Effects
Hanford Site environmental data for calendar year 1994: Surface and Columbia River, 20:30668 (R;US)

Environmental Impact Statements
Environmental Assessment: Relocation and storage of TRIGA® reactor fuel, Hanford Site, Richland, Washington, 20:29828 (R;US)
Hanford Site National Environmental Policy Act (NEPA) characterization. Revision 7, 20:30635 (R;US)

Fissile Materials
Project planning at the Hanford Site for International Atomic Energy Agency (IAEA) safeguards of excess fissile material, 20:29150 (R;US)

Ground Water
100-HR-3 Operable Unit focused feasibility study, 20:29081 (R;US)
100-KR-4 Operable Unit focused feasibility study, 20:29080 (R;US)
Groundwater maps of the Hanford Site, December 1994, 20:29035 (R;US)
Limited field investigation report for the 100-FR-1 Operable Unit, 20:29079 (R;US)
Modeling groundwater contamination transport for the Hanford Environmental Disposal Facility, 20:29036 (R;US)

Hydrology
Hydrochemistry and hydrogeologic conditions within the Hanford Site upper basalt confined aquifer system, 20:30747 (R;US)

Laboratories
Determination of the radioactive material and plutonium holdup in ducts and piping in the 327 Building, 20:29135 (R;US)

Liquid Wastes
Description of work for vadose zone characterization of the 1301-N and 1325-N liquid waste disposal facilities, 20:28823 (R;US)
Proposed plan for interim remedial measures at the 100-KR-1 Operable Unit. Revision 1, 20:29083 (R;US)

Maintenance
Engineering testing and technology projects FY 1996 Site Support Program Plan, WBS 6.3.3 and 6.3.8. Revision 1, 20:30329 (R;US)

Meteorology
User's guide for PLTWIND Version 1.0: PC-based software for generating plots of monitored wind data and gridded wind fields for Hanford emergency response applications, 20:30669 (R;US)
Radiation Monitoring
Location analysis and strontium-90 concentrations in deer antlers on the Hanford Site, 20:30832 (R;US)
Radiation Protection
Westinghouse Hanford Company ALARA year-end report, Calendar Year 1994: Revision 3A, Radiological engineering and ALARA, 20:29120 (R;US)
Radioactive Waste Disposal
Proposed plan for interim remedial measures at the 100-HR-1 Operable Unit, Hanford Site, Richland, Washington, 20:29082 (R;US)
Soil washing pilot plant treatability test for the 100-DR-1 Operable Unit, 20:29084 (R;US)
Radioactive Waste Facilities
Interim remedial measure proposed plan for the 200-UP-1 operable unit, Hanford, Washington, Revision 0, 20:29022 (R;US)
Radioactive Waste Management
1995 Baseline solid waste management system description, 20:28944 (R;US)
Approach and plan for cleanup actions in the 100-FR-2 operable unit of the Hanford Site, Revision 0, 20:28824 (R;US)
Assessment for potential radionuclide emissions from stacks and diffuse and fugitive sources on the Hanford Site, 20:30683 (R;US)
Hanford Site Pollution Prevention Plan progress report, 1994. Revision 1, 20:28822 (R;US)
Hanford Site ground-water monitoring for 1994, 20:29105 (R;US)
Leach test of cladding removal waste grout using Hanford groundwater, 20:28946 (R;US)
Preliminary analysis of tank 241-C-106 dryout due to large postulated leak and vaporization, 20:28896 (RA;US)
Vapor space characterization of waste tank 241-BX-104: Results from samples collected on 12/30/94, 20:28932 (R;US)
Vapor space characterization of waste tank 241-C-112: Results from samples collected on 8/11/94, 20:28933 (R;US)
Vapor space characterization of waste tank 241-S-102: Results from samples collected on 3/14/95, 20:28930 (R;US)
Vapor space characterization of waste tank 241-TY-103: Results from samples collected on 4/11/95, 20:28934 (R;US)
Radioactive Waste Processing
Description of waste pretreatment and interfacing systems dynamic simulation model, 20:28995 (R;US)
Radioactive Waste Storage
1995 solid waste 30-year container volume summary, 20:28993 (R;US)
Radioecology
Radionuclide concentrations in terrestrial vegetation and soil on and around the Hanford Site, 1983 through 1993, 20:30745 (R;US)
Remedial Action
100-BC-1 Excavation Demonstration Project Plan. Revision 2, 20:29085 (R;US)
Data fusion analysis of a surface direct-current resistivity and well pick data set, 20:29103 (R;US)
Interim remedial measure proposed plan for the 200-UP-1 operable unit, Hanford, Washington, Revision 0, 20:29022 (R;US)
Proposal plan for interim remedial measures at the 100-KR-1 operable unit, Revision 0, 20:29021 (R;US)
Proposed plan for interim remedial measure at the 100-KR-4 operable unit, Revision 1, 20:29020 (R;US)
Risk evaluation of remedial alternatives for the Hanford Site, 20:29077 (R;US)
Risk Assessment
Risk assessment for the on-site transportation of radioactive wastes for the U.S. Department of Energy Waste Management programmatic environmental impact statement, 20:28791 (R;US)
Site Characterization
Hanford Site ground-water monitoring for 1994, 20:29105 (R;US)
Storage Facilities
Effect of colloidal aggregation on the sedimentation and rheological properties of tank waste, 20:28950 (R;US)
Removal of strontium and transuranics from Hanford waste via hydrothermal processing – FY 1994/95 test results, 20:28953 (R;US)
Single-shell tank closure work plan. Revision A, 20:29076 (R;US)
Tank Waste Treatment Science Task quarterly report for October–December 1994, 20:28951 (R;US)
HARRY EVENT
See NUCLEAR EXPLOSIONS
HARVESTING
Develop a field grid system for yield mapping and machine control. Quarterly report, July 1, 1995–September 30, 1995, 20:30697 (R;US)
Soil and vegetation changes after clear-felling coniferous forests: effects of varying removal of logging residues, 20:29352 (R;SE)
HARVESTING EQUIPMENT
A new system of harvesting biomass is born, 20:29235 (RA;US)
Harvesting cotton stalks for use as a biomass feedstock, 20:29211 (RA;US)
Introduction of the first commercial MASSAHAKE-Plant, 20:29229 (RA;US)
Technologies for delivering forest biomass: Challenges and implications, 20:29197 (RA;US)
HASTELLOY XR
Creep behaviour of hastelloy XR in simulated high-temperature gas-cooled reactor helium, 20:30034 (R;JP)
HAZ
See HEAT AFFECTED ZONE
HAZARDOUS MATERIALS

Air Pollution Monitoring
A study of hazardous air pollutants at the Tidd PFBC Demonstration Plant, 20:29447 (R;US)
Catalysis
Molecular beam, mass spectrometric sampling in hazardous waste destruction, 20:30272 (RA;US)
Quantitative sampling with free-jet, molecular beam mass spectrometry, 20:29282 (RA;US)
Catalytic Reforming
Molecular beam, mass spectrometric sampling in hazardous waste destruction, 20:30272 (RA;US)
Combustion
The comparison of element partitioning in two types of thermal treatment facilities and the effects on potential radiation dose, 20:28961 (R;US)
Ecological Concentration
M-area hazardous waste management facility groundwater monitoring and corrective-action report, First quarter 1995, Volume 3, 20:29124 (R;US)
M-area hazardous waste management facility groundwater monitoring and corrective-action report, First quarter 1995, Volume 2, 20:29123 (R;US)
M-area hazardous waste management facility groundwater monitoring and corrective-action report, First quarter 1995, Volume 1, 20:29122 (R;US)
The Savannah River Site's groundwater monitoring program, Third quarter 1994, 20:29087 (R;US)
Encapsulation
Polyethylene encapsulation full-scale technology demonstration. Final report, 20:28802 (R;US)
Ground Disposal
Bentonite mat demonstration. Final report, 20:29001 (R;US)
Quality Assurance Project Plan for the treatability study of in situ vitrification of Seepage Pit 1 in Waste Area Grouping 7 at Oak Ridge National Laboratory, 20:28912 (R;US)
Land Transport
Risk assessment for the transportation of hazardous waste and hazardous waste components of low-level mixed waste and transuranic waste for the U.S. Department of Energy waste management programmatic environmental impact statement, 20:28795 (R;US)

Materials Handling
Chemical process safety management within the Department of Energy, 20:29109 (R;US)
Oxidation
Direct chemical oxidation of hazardous and mixed wastes, 20:28983 (R;US)
Pumping
Split driveshaft pump for hazardous fluids, 20:30308 (PA;US)
Pyrolysis
Quantitative sampling with free-jet, molecular beam mass spectrometry, 20:29282 (RA;US)
The comparison of element partitioning in two types of thermal treatment facilities and the effects on potential radiation dose, 20:28961 (R;US)
Quantitative Chemical Analysis
Quantitative sampling with free-jet, molecular beam mass spectrometry, 20:29282 (RA;US)
Radioactive Waste Management
Draft Waste Management Programmatic Environmental Impact Statement for managing treatment, storage, and disposal of radioactive and hazardous waste. Summary, 20:28807 (R;US)
Radioactive Waste Processing
Modeling of thermal plasma arc technology FY 1994 report, 20:28828 (R;US)
Remedial Action
FY-95 technology catalog. Technology development for buried waste remediation, 20:29073 (R;US)
Removal
Field demonstration of vapor phase TCE bioreactor. Final report, 20:29074 (R;US)
Sodium dichromate expedited response action assessment, Revision 3, 20:29078 (R;US)
Transport
The transportation external coordination working group, 20:28775 (R;US)
Underground Disposal
FY-95 technology catalog. Technology development for buried waste remediation, 20:29073 (R;US)
The role of plants and animals in isolation barriers at Hanford, Washington, 20:28958 (R;US)
Underground Storage
RCRA corrective action for underground storage tanks – Subtitle C for Subtitle I, 20:29835 (R;US)
Vitrification
Extending Fuzzy System Concepts for Control of a Vitrification Melter, 20:29000 (R;US)
Waste Management
Hazardous waste inventory, characteristics, generation, and facility assessment for treatment, storage, and disposal alternatives considered in the U.S. Department of Energy Waste Management Programmatic Environmental Impact Statement, 20:28794 (R;US)
RCRA contingency plans and emergency procedures, 20:29832 (R;US)
RCRA corrective action: Statement of basis and response to comments decision documents, 20:29834 (R;US)
RCRA facility assessments, 20:29833 (R;US)
Waste management facilities cost information for hazardous waste. Revision 1, 20:28833 (R;US)
Waste Processing
Direct chemical oxidation of hazardous and mixed wastes, 20:28983 (R;US)
Emissions model of waste treatment operations at the Idaho Chemical Processing Plant, 20:28839 (R;US)
Sodium carbonate salt transport system, 20:28987 (R;US)
Waste Storage
Waste management and the land disposal restriction storage prohibition, 20:29153 (R;US)
HAZARDOUS MATERIALS SPILLS
Environmental Guidance Regulatory Bulletin, 20:29836 (R;US)
HAZARDS
Site characterization criteria (DOE-STD-1022-94) for natural phenomena hazards at DOE sites. Revision 1, 20:29034 (R;US)
HAZEN PROCESS

ICR HEATING
Direct electron heating with directional fast wave launch on DIII-D, 20:31214 (R;US)
Measurement of rf voltages on the plasma-touching surfaces of ICRF antennas, 20:31204 (R;US)

HIGH-LEVEL RADIOACTIVE WASTES
Burnup
Study of the burning capability of the Los Alamos ATW system, 20:28884 (RA;US)
Containment
A guide for the ASME code for austenitic stainless steel containment vessels for high-level radioactive materials, 20:30279 (R;US)
Engineered materials characterization report for the Yucca Mountain Site Characterization Project. Volume 2, Design data (Yucca Mountain Project), 20:28977 (R;US)
Coordinated Research Programs
Accelerator driven reactors and nuclear waste management projects in the Czech Republic, 20:28880 (RA;US)
Cost Benefit Analysis
Potential benefits of waste transmutation to the U.S. high-level waste respository, 20:28864 (RA;US)
Health Hazards
Scoring methods and results for qualitative evaluation of public health impacts from the Hanford high-level waste tanks. Integrated Risk Assessment Program, 20:28942 (R;US)
Radiation Hazards
Risk assessment for the off-site transportation of high-level waste for the U.S. Department of Energy Waste Management Programmatic Environmental Impact Statement, 20:29039 (R;US)
Radioactive Waste Disposal
Hydraulic characterization of hydrothermally altered Nopal tuff, 20:28906 (R;US)
Safety aspects with regard to plutonium vitrification techniques, 20:30321 (R;US)
Site characterization progress report: Yucca Mountain, Nevada, October 1, 1994–March 31, 1995, Number 12. Nuclear Waste Policy Act (Section 113), 20:28826 (R;US)
Radioactive Waste Management
Draft Waste Management Programmatic Environmental Impact Statement for managing treatment, storage, and disposal of radioactive and hazardous waste. Summary, 20:28807 (R;US)
High-level waste inventory, characteristics, generation, and facility assessment for treatment, storage, and disposal alternatives considered in the U.S. Department of Energy Environmental Management Programmatic Environmental Impact Statement, 20:28790 (R;US)
Radioactive Waste Processing
Effects of soluble organic complexants and their degradation products on the removal of selected radionuclides from high-level waste. Part 3, Distributions of Sr, Cs, Tc, Pu, and Am onto 33 absorbers from four variations of a 3:1 dilution of Hanford complexant concentrate (CC) simulant: Part 4, The effects of varying dilution ratios on the distribut, 20:28860 (R;US)
Research Programs
Transmutation studies at CEA in frame of the SPIN program objectives, results and future trends, 20:28866 (RA;US)
Risk Assessment
Benefits and risks of P & T of nuclear waste, 20:28881 (RA;US)
Separation Processes
Chemico-technological support of transmutation objectives: Solid, molten salt and liquid blanket, 20:28887 (RA;US)
Solidification
Disposition of surplus fissile materials via immobilization, 20:28982 (R;US)
Technology Assessment
Future directions for ADTT concepts, 20:28889 (RA;US)
Transmutation
Accelerator driven reactors and nuclear waste management projects in the Czech Republic, 20:28880 (RA;US)
Accelerator driven transmutation technologies conference wrap-up, 20:28888 (RA;US)
Accelerator-based transmuter-breeder and energy producer from transuranic actinides and thorium, 20:29550 (RA;US)
Accelerator-driven nuclear synergetic systems-an overview of the research activities in Sweden, 20:28876 (RA;US)
An overview of Russian experience and capabilities for development of ATW/ABC systems, 20:28874 (RA;US)
Benefits and risks of P & T of nuclear waste, 20:28881 (RA;US)

Chemico-technological support of transmutation objectives: Solid, molten salt and liquid blanket, 20:28887 (RA;US)
Design considerations and evaluations of an accelerator-driven fluid fuel transmuter, 20:29545 (RA;US)
Development of advanced technological systems for accelerator transmutation, 20:28868 (RA;US)
EURAC: A liquid target neutron spallation, 20:28882 (RA;US)
Future directions for ADTT concepts, 20:28889 (RA;US)
JAERI R & D on accelerator-based transmutation under OMEGA program, 20:28867 (RA;US)
On the ATW-concepts: ITP approach and opportunities, 20:28875 (RA;US)
Plutonium (TRU) transmutation and ^{233}U production by single-fluid type accelerator molten-salt breeder (AMSB), 20:29551 (RA;US)
Potential benefits of waste transmutation to the U.S. high-level waste respository, 20:28864 (RA;US)
Potential role of ABC-assisted repositories in U.S. plutonium and high-level waste disposition, 20:28872 (RA;US)
Simulation of radioactive waste transmutation on the t.node parallel computer, 20:28879 (RA;US)
Study of the burning capability of the Los Alamos ATW system, 20:28884 (RA;US)
Subcritical neutron generator-test facility for nuclear waste transmutation studies, 20:29561 (RA;US)
The concept of the double-purpose electro-nuclear facility, 20:29554 (RA;US)
The extraction of some trivalent elements with Aliquat-336, 20:28886 (RA;US)
Transmutation studies at CEA in frame of the SPIN program objectives, results and future trends, 20:28866 (RA;US)
Waste transmutation with minimal fuel cycle long-term risk, 20:28873 (RA;US)

Underground Disposal
Application of TOUGH to hydrologic problems related to the unsaturated zone site investigation at Yucca Mountain, Nevada, 20:28899 (RA;US)
Assessment of the effects of microbially influenced degradation on a massive concrete structure. Final report, Report 5, 20:28972 (R;US)
Batch and column studies of adsorption of Li, Ni and Br by a reference sand for contaminant transport experiments, 20:28968 (R;US)
Characterization of a desert soil sequence at Yucca Mountain, NV, 20:30689 (R;US)
Drift-scale thermo-hydrologic analyses for the proposed repository at Yucca Mountain, NV, 20:28895 (RA;US)
Engineered materials characterization report for the Yucca Mountain Site Characterization Project. Volume 1, Introduction, history, and current candidates, 20:28976 (R;US)
Engineered materials characterization report for the Yucca Mountain Site Characterization Project. Volume 3: Corrosion and data modeling (Yucca Mountain Project), 20:28978 (R;US)
Engineered materials characterization report for the Yucca Mountain Site Characterization Project. Volume 2, Design data (Yucca Mountain Project), 20:28977 (R;US)
Estimation of hydraulic conductivities of Yucca Mountain tuffs from sorptivity and water retention measurements, 20:28900 (R;US)
Flow and transport simulations using T2CG1, a package of conjugate gradient solvers for the TOUGH2 family of codes, 20:28891 (R;US)
Fluid inclusion studies of calcite veins from Yucca Mountain, Nevada, Tuffs: Environment of formation, 20:30692 (R;US)
Geochemical studies for geologic disposal of high-level radioactive waste. Research activities in Department of Environmental Safety Research, Japan Atomic Energy Research Institute, 20:30715 (R;JP;In Japanese)
Ground-water recharge in Fortymile Wash near Yucca Mountain, Nevada, 1992–1993, 20:30688 (R;US)
Hydrogen migration test plan, 20:28923 (RA;JP)
Hydrologic property alterations due to elevated temperatures at Yucca Mountain, 20:29011 (R;US)
Integrated assessment - Japanese approach, 20:28925 (RA;JP)
Integrated assessment - the SKB approach, 20:28924 (RA;JP)
Isotopic studies of Yucca Mountain soil fluids and carbonate pedogenesis, 20:30693 (R;US)
Japanese issues on the future behavior of the geological environment, 20:30744 (RA;JP)
Observations of water movement in a block of fractured welded Tuff, 20:29010 (R;US)
Parametric analysis of a TOUGH2 model for the unsaturated zone at Yucca Mountain (Yucca Mountain Project), 20:29030 (RA;US)
SURFSCAN: Program to operate a LASER profilometer. Yucca Mountain Site Characterization Project (Yucca Mountain Project), 20:28966 (R;US)
Shallow infiltration processes in arid watersheds at Yucca Mountain, Nevada, 20:30691 (R;US)
Simulation of flow in the unsaturated zone beneath Pagany Wash, Yucca Mountain, 20:29012 (R;US)
Stochastic hydrogeologic units and hydrogeologic properties development for total-system performance assessments. Yucca Mountain Site Characterization Project, 20:28965 (R;US)
Temperature dependence of hydraulic conductivity of compacted bentonite, 20:28922 (RA;JP)
The use of TOUGH2 for the LBL/USGS 3-dimensional site-scale model of Yucca Mountain, Nevada, 20:29029 (RA;US)
Verification of a 1-dimensional model for predicting shallow infiltration at Yucca Mountain (Yucca Mountain Project), 20:30690 (R;US)

Underground Storage
A survey and description of candidate technologies to support single shell tank waste retrieval, leak detection, monitoring, and mitigation, 20:28949 (R;US)
AREST-CT V1.0 software verification, 20:28937 (R;US)
Aging mechanisms for steel components of high-level waste storage tanks, 20:28803 (R;US)
Ferrocyanide Safety Program cyanide speciation studies. Final report, 20:28939 (R;US)
Organic tank safety project: Preliminary results of energetics and thermal behavior studies of model organic nitrate and/or nitrite mixtures and a simulated organic waste, 20:28926 (R;US)
Potential role of ABC-assisted repositories in U.S. plutonium and high-level waste disposition, 20:28872 (RA;US)
Removal of strontium and transuranics from Hanford tank waste via addition of metal cations and chemical oxidant: FY 1995 test results, 20:28954 (R;US)
Scoring methods and results for qualitative evaluation of public health impacts from the Hanford high-level waste tanks. Integrated Risk Assessment Program, 20:28942 (R;US)

Vitrification
Corrosion behavior of a simulated high-level radioactive waste glass under oxic and anoxic conditions, 20:28857 (R;JP;In Japanese)
Disposition of surplus fissile materials via immobilization, 20:28982 (R;US)
Safety aspects with regard to plutonium vitrification techniques, 20:30321 (R;US)

Waste Transportation
Risk assessment for the off-site transportation of high-level waste for the U.S. Department of Energy Waste Management Programmatic Environmental Impact Statement, 20:29039 (R;US)

HIGH-TC SUPERCONDUCTORS
A symmetry based study of positron annihilation spectra, 20:31124 (R;XA)

HIGH-VOLTAGE PULSE GENERATORS
The Los Alamos/Arzamas-16 collaboration of ultrahigh magnetic fields and ultrahigh energy pulsed power, 20:31225 (R;US)

HIGHLY ENRICHED URANIUM
Evaluation of a potential nuclear fuel repository criticality: Lessons learned, 20:30287 (R;US)

HILACS
Beam dynamics in heavy ion fusion, 20:31227 (R;US)

HIPURE PROCESS

MONTE CARLO METHOD
Testing of the ENDF/B-VI neutron data library ENDF60 for use with MCNP™, 20:29498 (R;US)
MONTMORILLONITE
A quantitative mechanistic description of Ni, Zn and Ca sorption on Na-Montmorillonite. Part III: Modelling, 20:30224 (R;CH)
A quantitative mechanistic description of Ni, Zn and Ca sorption on Na-Montmorillonite. Part II: Sorption measurements, 20:30223 (R;CH)
A quantitative mechanistic description of Ni, Zn and Ca sorption on Na-Montmorillonite. Part I: Physico-chemical characterisation and titration measurements, 20:30222 (R;CH)
MOON
Clementine Star Tracker Stellar Compass: Final report part 1, 20:30559 (R;US)
Clementine Star Tracker Stellar Compass: Final report part 2, 20:30560 (R;US)
MOS TRANSISTORS
Effects of reliability screens of MOS charge trapping, 20:30372 (R;US)
Fast and slow border traps in MOS devices, 20:30381 (R;US)
Fast and slow border traps in MOS devices, 20:30537 (R;US)
MOTION
Metastable states and intermittent switching of small populations of confined point vortices, 20:30863 (R;US)
Multimodal interfaces with voice and gesture input, 20:30326 (R;US)
MOTORS
See also ELECTRIC MOTORS
Environmental research brief: Pollution prevention assessment for a manufacturer of outboard motors, 20:29935 (R;US)
Environmental research brief: Pollution prevention assessment for a manufacturer of components for outboard motors, 20:29939 (R;US)
MOUND LABORATORY
Physics group process report, April 1–30, 1948, 20:29160 (R;US)
Physics progress report, March 1–31, 1948, 20:29158 (R;US)

Production research progress report, February 16–29, 1948, 20:30241 (R;US)

Electronic Equipment
Electronics progress report, 20:29165 (R;US)
Electronics progress report, December 1–31, 1948, 20:29166 (R;US)

Environmental Impacts
Action description memorandum for the FY 1989 line item: Environmental, safety and health upgrades, Phase 2, 20:29100 (R;US)

Gloveboxes
Design criteria for SW-205 capillary system, 20:30305 (R;US)

Historical Aspects
Control Section progress report, April 1–30, 1948, 20:30606 (R;US)
Electrodeposition research progress report, 20:30610 (R;US)
Gamma scale chemistry progress report, 20:30607 (R;US)
General chemistry progress report, 20:30613 (R;US)
General chemistry progress report, 20:30611 (R;US)
General chemistry progress report, 20:30609 (R;US)
Physics progress report, 20:30608 (R;US)
Process research progress report, 20:30612 (R;US)

Power Distribution Systems
Design criteria for OSW alternate power, 20:29787 (R;US)

Production
Process Section progress report, April 1–30, 1948, 20:28764 (R;US)

Quality Control
Environmental quality control report. [Semiannual] report, July–December 1988, 20:30740 (R;US)

Radiation Protection
Shielding studies at Mound Laboratory, 20:29183 (R;US)

Radioactive Waste Processing
Environmental Assessment for the Operation of the Glass Melter Thermal Treatment Unit at the US Department of Energy's Mound Plant, Miamisburg, Ohio, 20:29827 (R;US)

Retrofitting
Action description memorandum for the Facilities Capability Assurance Program (FCAP) FY 1992 FCAP Item: Steam and condensate system upgrades, 20:30304 (R;US)

Safety
Action description memorandum for the FY 1989 line item: Environmental, safety and health upgrades, Phase 2, 20:29100 (R;US)

Security
Security guide for subcontractors, 20:29132 (R;US)

MULE DEER
See DEER

MULLITE
Development of oxidation/corrosion-resistant composite materials and interfaces, 20:30123 (RA;US)
Synthesis and processing of composites by reactive metal penetration, 20:30134 (RA;US)

MULTI-PHOTON PROCESSES
Multiphoton physics with x-rays, 20:31105 (R;US)

MULTICHARGED IONS
Measurement of the temperature of cold highly charged ions produced in an electron beam ion trap, 20:30873 (R;US)
Recent results from the super EBIT, 20:30874 (R;US)

MULTIPHASE FLOW
Development of an electrical impedance tomography system for an air-water vertical bubble column, 20:30344 (R;US)

MULTIPLICATION FACTORS
A few reactor physics experiments related to the HTGR safety at VHTRC, 20:29582 (RA;JP;In Japanese)

MULTIPROCESSING
See PARALLEL PROCESSING

MULTIPROCESSORS
See ARRAY PROCESSORS

MULTIVARIATE ANALYSIS
Using the bootstrap in a multivariadte data problem: An example, 20:31390 (R;US)

MULTIWIRE DRIFT CHAMBERS
See DRIFT CHAMBERS

MUNICIPAL WASTES
Clean energy from municipal solid waste. ERIP Technical progress report No. 2, 20:29249 (R;US)
Commercial operating experience with the Valorga process in the municipal solid waste treatment field, 20:29960 (RA;US)
Energy recovery from biosolids: The City of Los Angeles experience, 20:29959 (RA;US)
Hydrogen production by gasification of municipal solid waste, 20:29967 (RA;US)
Quantitative sampling with free-jet, molecular beam mass spectrometry, 20:29282 (RA;US)
The Designer Pellet project: Clean fuel from urban waste, 20:29290 (RA;US)

MUNITIONS
See ORDNANCE

MUON BEAMS
A prototype lattice design for a 2 TeV $\mu^+ - \mu^-$ collider, 20:30446 (R;US)
The double purpose muon-neutrino beam with the free decay path, 20:30450 (R;RU;In Russian)

MUON PAIRS
Studies for dimuon measurement with ALICE, 20:31089 (RA;US)

MUONS
The ring imaging Cerenkov detector for the BRAHMS experiment at RHIC, 20:30503 (R;US)

MUSEUMS
See EDUCATIONAL FACILITIES

N

N CODES
A nonlinear, implicit, three-dimensional finite element code for solid and structural mechanics - User's Manual, 20:30086 (R;US)

NAPHTHALENE
Molecular catalytic coal liquid conversion. Quarterly report, 20:28607 (R;US)
Molecular catalytic coal liquid conversion. Quarterly report, [October–December 1994], 20:28606 (R;US)

NARCOTICS
Remote detection of trace effluents using Resonance Raman spectroscopy: Field results and evaluation, 20:30198 (R;US)

NATIONAL ENVIRONMENTAL POLICY ACT
See US NATIONAL ENVIRONMENTAL POLICY ACT

NATIONAL REACTOR TESTING STATION
See IDAHO NATIONAL ENGINEERING LABORATORY

NATURAL CIRCULATION
See NATURAL CONVECTION

NATURAL CONVECTION
Quantitative code accuracy evaluation of ISP33, 20:29734 (RA;US)

NATURAL GAS
See also LIQUEFIED NATURAL GAS
World natural gas trends and gas projects, 20:28749 (R;KR;In Korean)

Cocombustion
An experimental study of NO_x recycle in the NOXSO flue gas cleanup process. Final report, 20:28653 (R;US)
Evaluation of gas reburning and low NO_x burners on a wall-fired boiler, 20:29443 (R;US)
Evaluation of gas reburning and low NO_x burners on a wall-fired boiler, 20:28649 (R;US)

Compiled Data
Natural gas monthly, August 1995, 20:28746 (R;US)
Natural gas monthly, September 1995 (Contains glossary), 20:28747 (R;US)

Demonstration Programs
Alternative-fueled truck demonstration natural gas program: Caterpillar G3406LE development and demonstration, 20:29978 (R;US)

Environmental Effects
Habitat reclamation plan to mitigate for the loss of habitat due to oil and gas production activities under maximum efficient rate,

Naval Petroleum Reserve No. 1, Kern County, California, 20:28718 (R;US)

Fuel Management
Expanding biomass power in a tough utility arena using diversified portfolio strategies, 20:29338 (RA;US)

Natural Gas Industry
A Study on the Improvement of Chlorination System, 20:28745 (R;KR;In Korean)

Odorization
A Study on the Odorant Mixtures and their Physical Properties, 20:28744 (R;KR;In Korean)

Physical Properties
Research for developing the program(II) of Estimating LNG/NG physical properties, 20:28758 (R;KR;In Korean)

Prices
Expanding biomass power in a tough utility arena using diversified portfolio strategies, 20:29338 (RA;US)

Production
Delineation of Piceance Basin basement structures using multiple source data: Implications for fractured reservoir exploration, 20:28732 (RA;US)
Gas-and water-saturated conditions in the Piceance Basin, Western Colorado: Implications for fractured reservoir detection in a gas-centered coal basin, 20:28733 (RA;US)
Recent federal initiatives to promote unconventional gas: High octane delivery of just hot air?, 20:28739 (RA;US)
Structurally controlled and aligned tight gas reservoir compartmentalization in the San Juan and Piceance Basins, 20:28734 (RA;US)
Winter fuels report, week ending October 6, 1995, 20:28713 (R;US)

Reserves
Emerging energy security issues: Natural gas in the Gulf Nations, An overview of Middle East resources, export potentials, and markets. Report Series No. 4, 20:28748 (R;US)
Three-dimensional multiphase effects in aquifer gas storage, 20:28736 (RA;US)

Storage
Natural gas storage and end user interaction: A progress report, September 30, 1994–March 31, 1995, 20:28754 (R;US)

Supply and Demand
Winter fuels report, week ending October 6, 1995, 20:28713 (R;US)

Thermodynamic Properties
Research for developing the program(II) of Estimating LNG/NG physical properties, 20:28758 (R;KR;In Korean)

Underground Storage
Three-dimensional multiphase effects in aquifer gas storage, 20:28736 (RA;US)

Uses
Recent federal initiatives to promote unconventional gas: High octane delivery of just hot air?, 20:28739 (RA;US)

Vehicles
Development of Compressed Natural Gas Fuel Cylinder for Vehicle, 20:28759 (R;KR;In Korean)

NATURAL GAS DEPOSITS
A study of the relationship of geological formation to the NORM. Quarterly technical progress report, April 1–June 30, 1995, 20:28751 (R;US)
Delineation of Piceance Basin basement structures using multiple source data: Implications for fractured reservoir exploration, 20:28732 (RA;US)
Gas-and water-saturated conditions in the Piceance Basin, Western Colorado: Implications for fractured reservoir detection in a gas-centered coal basin, 20:28733 (RA;US)
Naturally fractured tight gas reservoir detection optimization. Quarterly report, January–March 1995, 20:28735 (R;US)
Structurally controlled and aligned tight gas reservoir compartmentalization in the San Juan and Piceance Basins, 20:28734 (RA;US)

NATURAL GAS INDUSTRY
A Preliminary Study for Natural Gas Database System at the R and D Center of Korea Gas Corp, 20:28750 (R;KR;In Korean)
A study of the relationship of geological formation to the NORM. Quarterly technical progress report, April 1–June 30, 1995, 20:28751 (R;US)
Natural gas monthly, August 1995, 20:28746 (R;US)
Natural gas monthly, September 1995 (Contains glossary), 20:28747 (R;US)
Oil and gas development in the United States in the early 1990's: An expanded role for independent producers, 20:29874 (R;US)

NATURAL GAS WELLS
Continued support of "the Natural Resources Information System (NRIS) for the State of Oklahoma": Inclusion of a Native American focused effort. Quarterly technical progress report, April 1, 1995–June 30, 1995, 20:28688 (R;US)
High-power slim-hole drilling system, 20:28740 (R;US)

NAVAL PETROLEUM RESERVE
See US NAVAL PETROLEUM RESERVES

NAVIER-STOKES EQUATION
See NAVIER-STOKES EQUATIONS

NAVIER-STOKES EQUATIONS
Analytical solution of laminar-laminar stratified two-phase flows with curved interfaces, 20:29617 (RA;US)
Relaxation spectra of surface waves, 20:30346 (R;US)
Unsteady flow volumes, 20:30345 (R;US)

NAVIGATION
MAP. Builds/Maintains 2D Grid Maps of Sensor Data in Real-Time, 20:31325 (CM;US)
MESH. Builds/Maintains 2D Grid Maps of Sensor-Detected Obstacles in Real-Time, 20:31326 (CM;US)

NEGATIVE IONS

OCCUPATIONAL SAFETY
Lessons learned from occurrences involving procedures at Los Alamos National Laboratory in 1994, 20:29096 (R;US)

OCEAN CURRENTS
See WATER CURRENTS

OCEANIC CIRCULATION
Carbon dioxide, hydrographic, and chemical data obtained during the R/V Meteor cruise 15/3 in the South Atlantic Ocean. WOCE Section A9, February–March 1991, 20:30772 (R;US)
Large scale circulation and meridional transports in the South Pacific, 20:30650 (R;DE;In German)

OCEANS
See SEAS

OCONEE-1 REACTOR
Burnup verification measurements at U.S. Nuclear Facilities using the Fork system, 20:28774 (R;US)

OCONEE-2 REACTOR
Burnup verification measurements at U.S. Nuclear Facilities using the Fork system, 20:28774 (R;US)

OCONEE-3 REACTOR
Burnup verification measurements at U.S. Nuclear Facilities using the Fork system, 20:28774 (R;US)

OCTANE
MBMS and gas phase chromatography studies of n-heptane and iso-octane flames, 20:30258 (RA;US)

ODOCOILEUS
See DEER

ODORIZATION
A Study on the Odorant Mixtures and their Physical Properties, 20:28744 (R;KR;In Korean)

OFF-GAS SYSTEMS
Development of mixed-waste analysis capability for graphite furnace atomic absorption spectrophotometry, 20:30636 (R;US)

OFFICE BUILDINGS
An ORNL office building used as a federal test bed for energy efficient roofs, 20:29901 (R;US)

OFFSHORE OPERATIONS
Field studies of beach cones as coastal erosion control/reversal devices for areas with significant oil and gas activities. Final report, February 24, 1992–September 18, 1995, 20:28717 (R;US)

OFFSHORE PLATFORMS
Earthquake loading on offshore structures. Final report, 20:30358 (R;DE;In German, English)

OFFSHORE SITES
Assist in the recovery of bypassed oil for reservoirs in the Gulf of Mexico. Annual report, February 1994–February 1995, 20:28677 (R;US)

OHMIC RESISTANCE
See ELECTRIC CONDUCTIVITY

OIL BURNERS
Field testing the prototype BNL fan-atomized oil burner, 20:28726 (RA;US)
Rotrix 'vortex breakdown' burner turbulence-stabilized combustion of heating oil, 20:28722 (RA;US)
The BNL fan-atomized burner system prototype, 20:28725 (RA;US)

OIL FIELDS
Advanced secondary recovery demonstration for the Sooner Unit. Progress report, July 1–September 30, 1995, 20:28693 (R;US)
Application of reservoir characterization and advanced technology to improve recovery and economics in a lower quality shallow shelf carbonate reservoir. Quarterly progress report, March 1, 1995–June 30, 1995, 20:28699 (R;US)
GYPSY field project in reservoir characterization. Quarterly progress report, April 1, 1995–June 30, 1995, 20:28681 (R;US)
Geological and petrophysical characterization of the Ferron Sandstone for 3-D simulation of a fluvial-deltaic reservoir. Technical progress report, April 1–June 30, 1995, 20:28678 (R;US)
Identification and evaluation of fluvial-dominated deltaic (Class 1 oil) reservoirs in Oklahoma. Quarterly technical progress report, October 1, 1994–December 31, 1994, 20:28694 (R;US)
Identification and evaluation of fluvial-dominated deltaic (Class 1 oil) reservoirs in Oklahoma. Quarterly technical progress report, January 1, 1995–March 31, 1995, 20:28695 (R;US)
Increased oil production and reserves from improved completion techniques in the Bluebell Field, Uinta Basin, Utah. Seventh quarterly technical progress report, April 1, 1995–June 30, 1995, 20:28680 (R;US)

OIL FURNACES
Canadian R&D on oil-fired integrated systems, 20:28723 (RA;US)
Development and technology transfer of the BNL flame quality indicator for oil-fired applications: Project report, 20:29895 (R;US)
Fuel sulfur and boiler fouling, 20:28727 (RA;US)
Oil heat technology research and development, 20:28721 (RA;US)
PMAA's national certification program for oil heat technicians, 20:28729 (RA;US)
Proper use of sludge-control additives in residential heating oil systems, 20:28728 (RA;US)
The BNL fan-atomized burner system prototype, 20:28725 (RA;US)
The Oilheat Manufacturers Associations Oilheat Advantages Project, 20:28730 (RA;US)
The application of masonry chimney venting tables for oil-fired appliances, 20:28724 (RA;US)

OIL RESIDUES
See PETROLEUM RESIDUES

OIL SHALE WASTE WATER
See WASTE WATER

OIL SPILL FINGERPRINTING
See OIL SPILLS

OIL SPILLS
Environmental Guidance Regulatory Bulletin, 20:29836 (R;US)
Test plan for the data acquisition and management system for monitoring the fuel oil spill at the Sandia National Laboratories installation in Livermore, California, 20:28716 (R;US)

OIL WELLS
Advanced secondary recovery demonstration for the Sooner Unit. Progress report, July 1–September 30, 1995, 20:28693 (R;US)
Application of integrated reservoir management and reservoir characterization to optimize infill drilling. Quarterly progress report, June 13, 1995–September 12, 1995, 20:28683 (R;US)
Application of reservoir characterization and advanced technology to improve recovery and economics in a lower quality shallow shelf carbonate reservoir. Quarterly progress report, March 1, 1995–June 30, 1995, 20:28699 (R;US)
Chemical systems for improved oil recovery: Phase behavior, oil recovery, and mobility control studies, 20:28703 (R;US)
Continued support of "the Natural Resources Information System (NRIS) for the State of Oklahoma": Inclusion of a Native American focused effort. Quarterly technical progress report, April 1, 1995–June 30, 1995, 20:28688 (R;US)
Improved recovery demonstration for Williston basin carbonates. Annual report, June 10, 1994–June 9, 1995, 20:28682 (R;US)
Increased oil production and reserves from improved completion techniques in the Bluebell Field, Uinta Basin, Utah. Seventh quarterly technical progress report, April 1, 1995–June 30, 1995, 20:28680 (R;US)
Increasing waterflood reserves in the Wilmington oil field through improved reservoir characterization and reservoir management. Quarterly technical progress report, March 21, 1995–June 30, 1995, 20:28679 (R;US)
Method for cutting steam heat losses during cyclic steam injection of wells. Sixth quarterly report, 20:28700 (R;US)
Post waterflood CO_2 miscible flood in light oil fluvial: Dominated deltaic reservoirs. Third quarterly report, April 1, 1995–June 30, 1995, 20:28697 (R;US)
Research on oil recovery mechanisms in heavy oil reservoirs. [Quarterly] report, April–June 30, 1995, 20:28692 (R;US)
Surfactant loss control in chemical flooding: Spectroscopic and calorimetric study of adsorption and precipitation on reservoir

minerals. Quarterly progress report, April 1, 1995–June 30, 1995, 20:28690 (R;US)

OKLAHOMA
Continued support of "the Natural Resources Information System (NRIS) for the State of Oklahoma": Inclusion of a Native American focused effort. Quarterly technical progress report, April 1, 1995–June 30, 1995, 20:28688 (R;US)
Identification and evaluation of fluvial-dominated deltaic (Class 1 oil) reservoirs in Oklahoma. Quarterly technical progress report, October 1, 1994–December 31, 1994, 20:28694 (R;US)
Identification and evaluation of fluvial-dominated deltaic (Class 1 oil) reservoirs in Oklahoma. Quarterly technical progress report, January 1, 1995–March 31, 1995, 20:28695 (R;US)

OLIGONUCLEOTIDES
Separation of a chemically modified DNA oligomer bound by the carcinogen 2-Amino-1-methy-6-phenylimidazo [4,5-β]pyridine using capillary gel electrophoresis, 20:30795 (RA;US)

OLKILUOTO REACTOR
See TVO-1 REACTOR

OLYMPIC DAM MINE
Particle sizing of airborne radioactivity field measurements at Olympic Dam, 20:30818 (R;AU)

OMEGA FACILITY
LLE Review: Volume 63. Quarterly report, April–June 1995, 20:31211 (R;US)

ON-LINE COMPUTERS

OPTICAL FIBERS
Bright and dark solitary wave propagation and bistability in the anomalous dispersion region of optical waveguides with third- and fifth-order nonlinearities, 20:30888 (R;XA)
Development of a cable reel development system using a rotary joint for kilometer lengths of two-fiber multi-mode fiber optic cable, 20:29984 (R;US)
Optical absorption and luminescence in neutron-irradiated, silica-based fibers, 20:30161 (RA;US)

OPTICAL FILTERS
A two dimensional array of optical interference filters produced by lithographic alterations of the index of refraction, 20:30548 (R;US)

OPTICAL MODELS
An evaluation of diverse methods of obtaining effective Schroedinger interaction potentials for elastic scattering, 20:31051 (R;AU)

OPTICAL SYSTEMS
A database of wavefront measurements for laser system modeling, optical component development and fabrication process qualification, 20:31265 (R;US)
Hybrid optics for the visible produced by bulk casting of sol-gel glass using diamond-turned molds, 20:30539 (R;US)
Neutron and gamma irradiated optical property changes for the final optics of the National Ignition Facility, 20:31260 (R;US)
Opto-mechanical design and fabrication services. Final report, 20:30604 (R;US)
Parasitic pencil beams caused by lens reflections in laser amplifier chains, 20:31268 (R;US)
Performance of laser guide star adaptive optics at Lick Observatory, 20:30327 (R;US)
Simulation of phase structures, 20:31380 (R;US)

OPTICS
See also NONLINEAR OPTICS
The origin and evolution of the optics specifications for the National Ignition Facility, 20:31243 (R;US)

ORANGE EVENT
See NUCLEAR EXPLOSIONS

ORDNANCE
A cost-effective adverse-weather precision guidance system, 20:30573 (R;US)
LANL High-Level Model (HLM) database development letter report, 20:30623 (R;US)

ORGANIC BROMINE COMPOUNDS
Molecular beam/mass spectrometric and modeling studies of CF_3Br inhibited flames, 20:30264 (RA;US)

ORGANIC COMPOUNDS
See also HETEROCYCLIC COMPOUNDS
HYDROCARBONS
ORGANIC NITROGEN COMPOUNDS
ORGANIC PHOSPHORUS COMPOUNDS
ORGANIC POLYMERS
PROTEINS
Estimation of the natural non-methane VOC emissions from vegetation in Switzerland, 20:30645 (RA;CH)
Removal of strontium and transuranics from Hanford waste via hydrothermal processing – FY 1994/95 test results, 20:28953 (R;US)
Sanitary landfill groundwater monitoring report. Fourth quarter 1994 and 1994 summary, 20:30766 (R;US)
Transport and sorption of volatile organic compounds and water vapor in porous media, 20:30737 (R;US)
Use of electric fields to enhance industrial chemical processing. Final report, 20:29929 (R;US)
Using simulation-optimization techniques to improve multiphase aquifer remediation, 20:30726 (RA;US)
Verification of T2VOC using an analytical solution for VOC transport in vadose zone, 20:30731 (RA;US)

ORGANIC ION EXCHANGERS
Chromium removal from ground water by Ion exchange resins, 20:30752 (RA;US)
Synthesis, structural characterization, and performance evaluation of resorcinol-formaldehyde (R-F) ion-exchange resin, 20:28945 (R;US)

ORGANIC MATTER
Bio-energy Recovery Systems for brewery wastewater management, 20:29943 (RA;US)
Electron impact, hyperthermal surface ionization and fast GC-MS in supersonic molecular beams, 20:30216 (RA;US)
The anaerobic digestion process, 20:30793 (RA;US)

ORGANIC NITROGEN COMPOUNDS
See also CARBAZIDES
IMINES
NITRO COMPOUNDS
PORPHYRINS
A molecular architectural approach to second-order nonlinear optical materials, 20:30237 (R;US)

ORGANIC PHOSPHORUS COMPOUNDS
Molecular beam mass-spectrometric study of H_2/O_2/Ar flame doped with phosphorus compounds, 20:30259 (RA;US)

ORGANIC POLYMERS
See also PLASTICS
POLYAMIDES
RESINS
RUBBERS
THERMOPLASTICS
Polymerization and processing of organic polymers in a magnetic field, 20:30180 (RA;US)
Synthesis and study of novel silicon-based unsaturated polymers, 20:30166 (R;US)

ORGANIC SOLVENTS
Laboratory treatability studies preparatory to field testing a resting-cell in situ microbial filter bioremediation strategy, 20:30757 (R;US)
New perspectives on the cancer risks of trichloroethylene, its metabolites, and chlorination by-products, 20:30841 (R;US)

The role of recycle oil in direct coal liquefaction process development, 20:28590 (R;US)

ORGANIC WASTES
See also AGRICULTURAL WASTES
Advanced organic analysis and analytical methods development: FY 1995 progress report. Waste Tank Organic Safety Program, 20:28955 (R;US)
Anaerobic digestion of municipal solid waste: Technical developments, 20:29964 (RA;US)
Direct chemical oxidation of hazardous and mixed wastes, 20:28983 (R;US)
Novel membrane technology applications and "green" product development for industrial pollution prevention. Bioconversion of high-starch food wastes into high-value products, 20:29363 (R;US)
Organic waste recycling to short rotation wood crops, 20:29354 (RA;US)
Pollution prevention opportunity assessment for the K-25 Site Toxic Substances Control Act Incinerator Operations, Level III, 20:28859 (R;US)
Preliminary analysis of NAPL behavior in soil-heated vapor extraction for in-situ environmental restoration, 20:29114 (R;US)

ORGANIZATIONAL MODELS
M2 priority screening system for near-term activities: Project documentation. Final report December 11, 1992–May 31, 1994, 20:31308 (R;US)

ORGDP
Pilot-scale treatability testing – Recycle, reuse, and disposal of materials from decontamination and decommissioning activities: Soda blasting demonstration, 20:29075 (R;US)

ORIFICES
A study of sampling phenomena in a probe nozzle for high temperature MBMS, 20:30273 (RA;US)

ORNL
Addendum to the health and safety plan for Waste Area Grouping 6 at Oak Ridge National Laboratory, Oak Ridge, Tennessee. Environmental Restoration Program, 20:28908 (R;US)
Chemical and Analytical Sciences Division progress report for the period January 1, 1993–December 31, 1994, 20:29853 (R;US)
Integrated assessment briefs, 20:29854 (R;US)
On-site laboratory support of Oak Ridge National Laboratory environmental restoration field activities, 20:28806 (R;US)
Project management plan for inactive tanks 3001-B, 3004-B, 3013, and T-30 at Oak Ridge National Laboratory, Oak Ridge, Tennessee. Environmental Restoration Program, 20:28913 (R;US)
Site investigation report for Waste Area Grouping 4 at Oak Ridge National Laboratory. Volume 1, Text: Environmental Restoration Program, 20:28914 (R;US)
Site investigation report for Waste Area Grouping 4 at Oak Ridge National Laboratory. Volume 2, Appendixes: Environmental Restoration Program, 20:28915 (R;US)
Site investigation report for Waste Area Grouping 4 at Oak Ridge National Laboratory. Volume 1, Text: Environmental Restoration Program, 20:28914 (R;US)
Surface radiological investigations at the proposed SWSA 7 Site, Oak Ridge National Laboratory, Oak Ridge, Tennessee, 20:29031 (R;US)
Waste management plan for inactive LLLW tanks 3001-B, 3004-B, 3013, and T-30 at Oak Ridge National Laboratory, Oak Ridge, Tennessee. Environmental Restoration Program, 20:28910 (R;US)

PLUMES
Calendar Year 1994 Groundwater Quality Report for the Bear Creek Hydrogeologic Regime Y-12 Plant, Oak Ridge, Tennessee, 20:29125 (R;US)
Free-jet mass spectrometry of laser ablation plumes in thin film deposition, 20:30307 (RA;US)
Geophysical characterization of subsurface barriers, 20:28969 (R;US)
Predicting the distribution of contamination from a chlorinated hydrocarbon release, 20:30724 (RA;US)

PLUTONIUM
Adsorption
Effects of soluble organic complexants and their degradation products on the removal of selected radionuclides from high-level waste. Part 3, Distributions of Sr, Cs, Tc, Pu, and Am onto 33 absorbers from four variations of a 3:1 dilution of Hanford complexant concentrate (CC) simulant: Part 4, The effects of varying dilution ratios on the distribut, 20:28860 (R;US)

Burnup
Study of the burning capability of the Los Alamos ATW system, 20:28884 (RA;US)

Ecological Concentration
Livermore Big Trees Park Soil Survey, 20:30755 (R;US)

Extraction Chromatography
Feasibility study of plutonium and uranium measurements in input dissolver solutions, 20:30204 (R;US)

Gamma Spectra
New analysis technique for K-edge densitometry spectra, 20:31352 (R;US)

Gamma Spectroscopy
Feasibility study of plutonium and uranium measurements in input dissolver solutions, 20:30204 (R;US)

Inventories
Determination of the radioactive material and plutonium holdup in ducts and piping in the 327 Building, 20:29135 (R;US)

Isotope Ratio
PC/FRAM: New capabilities for the gamma-ray spectrometry measurement of plutonium isotopic composition, 20:30516 (R;US)

Nuclear Fuel Conversion
Opportunities for mixed oxide fuel testing in the advanced test reactor to support plutonium disposition, 20:28765 (R;US)

Nuclear Materials Management
Status of electro-nuclear facilities development in ITEP, 20:29130 (RA;US)

Packaging
Historical review of plutonium storage container failures at Lawrence Livermore National Laboratory, 20:28782 (R;US)

Radioactive Waste Disposal
Safety aspects with regard to plutonium vitrification techniques, 20:30321 (R;US)

Radioactive Waste Storage
What is plutonium stabilization, and what is safe storage of plutonium?, 20:28916 (R;US)

Radiometric Analysis
Operating new 55-gallon drum shufflers at Los Alamos, 20:28863 (R;US)

Removal
Effects of soluble organic complexants and their degradation products on the removal of selected radionuclides from high-level waste. Part 3, Distributions of Sr, Cs, Tc, Pu, and Am onto 33 absorbers from four variations of a 3:1 dilution of Hanford complexant concentrate (CC) simulant: Part 4, The effects of varying dilution ratios on the distribut, 20:28860 (R;US)

Separation Processes
Chemistry of pyroprocessing for nuclear waste transmutation, 20:28773 (RA;US)
The extraction of some trivalent elements with Aliquat-336, 20:28886 (RA;US)

Source Terms
Source terms for plutonium aerosolization from nuclear weapon accidents, 20:30834 (R;US)

Stability
What is plutonium stabilization, and what is safe storage of plutonium?, 20:28916 (R;US)

Technology Assessment
Future directions for ADTT concepts, 20:28889 (RA;US)

Transmutation
A high gain energy amplifier operated with fast neutrons, 20:28865 (RA;US)
A long view of global plutonium management, 20:29129 (RA;US)
Accelerator driven transmutation technologies conference wrap-up, 20:28888 (RA;US)
Accelerator-based transmuter-breeder and energy producer from transuranic actinides and thorium, 20:29550 (RA;US)
An overview of Russian experience and capabilities for development of ATW/ABC systems, 20:28874 (RA;US)
Combining a gas turbine modular helium reactor and an accelerator and for near total destruction of weapons grade plutonium, 20:29131 (RA;US)
Future directions for ADTT concepts, 20:28889 (RA;US)

Plutonium (TRU) transmutation and ^{233}U production by single-fluid type accelerator molten-salt breeder (AMSB), 20:29551 (RA;US)
Some nuclear safety aspects of the Los Alamos accelerator based converion concept, 20:29590 (RA;US)
Study of the burning capability of the Los Alamos ATW system, 20:28884 (RA;US)
The chemistry of ABC, 20:29556 (RA;US)
The physics design of accelerator-driven transmutation systems, 20:28871 (RA;US)

Vitrification
Safety aspects with regard to plutonium vitrification techniques, 20:30321 (R;US)

X-Ray Spectra
New analysis technique for K-edge densitometry spectra, 20:31352 (R;US)

PLUTONIUM 238
Baseline radionuclide concentrations in soils and vegetation around the proposed Weapons Engineering Tritium Facility and the Weapons Subsystems Laboratory at TA-16, 20:29028 (R;US)
Radionuclide contaminant analysis of small mammals at Area G, TA-54, 1994, 20:29027 (R;US)

PLUTONIUM 239
800-MeV proton irradiation of thorium and depleted uranium targets, 20:31072 (RA;US)
Baseline radionuclide concentrations in soils and vegetation around the proposed Weapons Engineering Tritium Facility and the Weapons Subsystems Laboratory at TA-16, 20:29028 (R;US)
Derivation of plutonium-239 materials disposition categories, 20:29147 (R;US)
Qualitative chemical analysis of plutonium by Alpha spectroscopy., 20:28769 (I;MX;In Spanish)
Radionuclide contaminant analysis of small mammals at Area G, TA-54, 1994, 20:29027 (R;US)
Transmutation of fission products and actinide waste at Hanford, 20:29562 (RA;US)

PLUTONIUM ISOTOPES

General chemistry progress report, 20:30611 (R;US)

Plating
Electrodeposition research progress report, August 1–31, 1948, 20:29161 (R;US)

Polarography
General chemistry progress report, May 1–31, 1948, 20:30255 (R;US)

Purification
Gamma scale chemistry progress report, August 1–31, 1948, 20:30242 (R;US)

Solubility
Neutron source progress report, August 1–31, 1948, 20:29177 (R;US)

Surface Coating
Electrodeposition research progress report, 20:30610 (R;US)

Thermal Expansion
Density of metallic polonium, 20:30253 (R;US)

Vapor Pressure
Physics group progress report, July 1–31, 1948, 20:30256 (R;US)
Physics group progress report, May 1–31, 1948, 20:30254 (R;US)

POLONIUM 218
A system for aerodynamically sizing ultrafine environmental radioactive particles, 20:30562 (R;US)

POLONIUM BROMIDES
Gamma scale chemistry progress report, August 1–31, 1948, 20:30242 (R;US)
POLONIUM OXIDES
Gamma scale chemistry progress report, August 1–31, 1948, 20:30242 (R;US)
POLY(ISOBUTYLENE OXIDE)
See ORGANIC POLYMERS
POLYACRYLONITRILE
See ORGANIC POLYMERS
POLYAMIDES
Measurement of extensional viscosity by the stretching of viscoelastic liquid columns. Quarterly report, April–June, 1995, 20:30335 (R;US)
POLYATOMIC MOLECULES
See MOLECULES
POLYCHLORINATED BIPHENYLS
Differentiation of Aroclors in environmental samples using linear discrimination, 20:30694 (R;US)
Effects of cooking on levels of PCBs in the fillets of winter flounder (Pseudopleureonectes americanus), 20:30840 (R;US)
PCB extraction from ORNL tank WC-14 using a unique solvent, 20:28919 (R;US)
POLYCYCLIC AROMATIC HYDROCARBONS
Novel bimetallic dispersed catalysts for temperature-programmed coal liquefaction. Technical progress report, January–March, 1995, 20:28617 (R;US)
POLYETHYLENES
Biomimetic thin film synthesis, 20:30182 (RA;US)
Catalytic multi-stage liquefaction of coal. Tenth quarterly report, January 1–March 31, 1995, 20:28618 (R;US)
POLYMERS
See also INORGANIC POLYMERS
ORGANIC POLYMERS
Accelerated degradation studies of MEH-PPV, 20:30191 (R;US)
Advanced microwave processing concepts, 20:30181 (RA;US)
Conducting polymers: Synthesis and industrial applications, 20:30178 (RA;US)
Defects and morphological concerns in electroluminescent polymers, 20:30192 (R;US)
Descriptions of positron defect analysis capabilities, 20:30184 (R;US)
Synthesis and study of novel silicon-based unsaturated polymers, 20:30166 (R;US)
POLYMETHYLMETHACRYLATES
See PMMA
POLYNUCLEAR AROMATIC HYDROCARBONS
See POLYCYCLIC AROMATIC HYDROCARBONS
POLYSTYRENE
Catalytic multi-stage liquefaction of coal. Tenth quarterly report, January 1–March 31, 1995, 20:28618 (R;US)
The potential energy of a pair of polystyrene spheres in alternating electric fields, 20:31116 (R;US)
POLYSULFIDES
See SULFIDES
POLYTETRAOXANE
See ORGANIC POLYMERS
POLYTHENE

SULFUR COMPOUNDS
POOL BOILING
A model of film boiling in the presence of electric fields, 20:29514 (RA;US)
POPLARS
Is there a need for site productivity functions for short-rotation woody crop plantings?, 20:29212 (RA;US)
Productivity of poplar grown on short rotation in Spain: Influence of the rotation age and plant density, 20:29215 (RA;US)
Variability in the composition of short rotation woody feedstocks, 20:29213 (RA;US)
POPULATION DENSITY
Implementation of a new algorithm for Density Equalizing Map Projections (DEMP), 20:30723 (R;US)
POROSITY
Inert plug formation in the DDT of granular energetic materials, 20:30588 (R;US)
POROUS MATERIALS
Analysis of nuclide transport under natural convection and time dependent boundary condition using TOUGH2, 20:28893 (RA;US)
EVEGAS Project (European validation exercise of GAS migration model), 20:30736 (RA;US)
ITOUGH2: Solving TOUGH inverse problems, 20:30735 (RA;US)
LNAPL infiltration in the vadose zone: Comparisons of physical and numerical simulations, 20:30725 (RA;US)
Mathematical and numerical formulation of nonisothermal multicomponent three-phase flow in porous media, 20:30749 (R;US)
Scale up of flow in porous media, 20:30722 (R;US)
The effect of vadose zone heterogeneities on vapor phase migration and aquifer contamination by volatile organics, 20:30733 (RA;US)
PORPHYRINS
See also CHLOROPHYLL
Synthesis and characterization of tetraphenylporphyrinate of dysprosium route dysprosium acetylacetonate., 20:30234 (I;MX;In Spanish)
PORTMANTEAU EVENT
See NUCLEAR EXPLOSIONS
UNDERGROUND EXPLOSIONS
PORTSMOUTH GASEOUS DIFFUSION PLANT
Nuclear criticality safety evaluation of large cylinder cleaning operations in X-705, Portsmouth Gaseous diffusion Plant, 20:30316 (R;US)
POSITION SENSITIVE DETECTORS
P-type silicon drift detectors, 20:30518 (R;US)
P-type silicon drift detectors: First results, 20:30519 (R;US)
Position sensitivity in gallium arsenide radiation detectors, 20:30507 (R;US)
POSITRON BEAMS
Design and Analysis of a Wiggler Magnet Systems for the SLAC B-Factory LER, 20:30489 (R;US)
POSITRON-ELECTRON-PROTON STORAGE RING
See PEP STORAGE RINGS
POSITRONS
Enigmatic electrons, photons, and "empty" waves, 20:30958 (R;US)
POSTULATED PARTICLES
See also GLUONS
HIGGS BOSONS
MAGNETIC MONOPOLES
PARTONS
TOP PARTICLES
Structural and phonon transmission study of Ge-Au-Ge eutectically bonded interfaces, 20:30520 (R;US)
POSTUM
See POLONIUM 210
POTABLE WATER
See DRINKING WATER
POTASSIUM
Novel catalysts for methane activation. Quarterly report number 10, January 1–March 31, 1995, 20:28742 (R;US)
Resonant second harmonic generation in potassium vapor, 20:30902 (R;US)
POTASSIUM 40
Radionuclide contaminant analysis of small mammals at Area G, TA-54, 1994, 20:29027 (R;US)
POTASSIUM HYDRIDES
Schottky defect formation energy of Alkali hydrides, 20:31118 (R;XA)
POTASSIUM PHOSPHATES
A procedure for diamond turning KDP crystals, 20:30187 (R;US)
Sources of strain in rapidly grown crystals of KH_2PO_4, 20:30185 (R;US)

POTENTIAL (ELECTRIC)
See ELECTRIC POTENTIAL
POTENTIAL BARRIERS
See POTENTIALS
POTENTIALS
Algebraic description of one-dimensional potentials and the su(1,1) Lie algebra, 20:30857 (R;XA)
Solution of Schroedinger equation for two-dimensional potential using supersymmetry, 20:30982 (IA;BR;In Portuguese)
Supersymmetry partial algebra and the potential $V(x) = x^2 + \lambda [x^2/1 + g x^2]$, 20:30981 (IA;BR;In Portuguese)
POTT-BROCHE PROCESS
See COAL LIQUEFACTION
POWDERS
Preparation of bismuth powder, 20:30061 (R;US)
Preparation of bismuth powder, 20:30060 (R;US)
Visualization of powder trapping in rf silane plasmas by 2-D polarization-sensitive laser scattering, 20:31186 (R;CH)
POWER CONDITIONING CIRCUITS
Fault tolerance of the NIF power conditioning system, 20:31284 (R;US)
POWER CONDITIONING SYSTEMS
See POWER CONDITIONING CIRCUITS
POWER DEMAND
Electric Power Monthly, September 1995: With data for June 1995, 20:29879 (R;US)
Recent program evaluations: Implications for long-run planning, 20:29792 (R;US)
POWER DISTRIBUTION SYSTEMS
A Study of the Establishment of Algorithm and the Standardization for Distribution Automation, 20:29785 (R;KR;In Korean)
Design criteria for OSW alternate power, 20:29787 (R;US)
POWER GENERATION

Analysis of an AP600 intermediate-size loss-of-coolant accident, 20:29674 (RA;US)
Application of UPTF data for modeling liquid draindown in the downcomer region of a PWR using RELAP5/MOD2-B&W, 20:29667 (RA;US)
Intermediate-break LOCA analyses for the AP600 design, 20:29587 (R;US)
Modeling of local steam condensation on walls in presence of non-condensable gases. Application to a loca calculation in reactor containment using the multidimensional geyser/tonus code, 20:29692 (RA;US)
RELAP5/MOD3 code manual: Code structure, system models, and solution methods. Volume 1, 20:29772 (R;US)
Small-break loss-of-coolant accidents in the updated PIUS 600 advanced reactor design, 20:29670 (RA;US)
UPTF-TRAM experiments for SBLOCA: Evaluation of condensation processes in TRAM tests A6 and A7, 20:29629 (RA;US)

Meltdown
Investigations on sump cooling after core melt down, 20:29690 (RA;US)

Natural Convection
ISP33 standard problem on the PACTEL facility, 20:29759 (RA;US)
Investigations on sump cooling after core melt down, 20:29690 (RA;US)

Pressure Vessels
Simulation of the thermalhydraulic behavior of a molten core within a structure, with the three dimensions three components TOLBIAC code, 20:29718 (RA;US)

Primary Coolant Circuits
Assessment of the advantages of a residual heat removal system inside the reactor pressure vessel, 20:29676 (RA;US)
CCFL in hot legs and steam generators and its prediction with the CATHARE code, 20:29652 (RA;US)
SPES-2, AP600 intergral system test S01007 2 inch CL to core make-up tank pressure balance line break, 20:29762 (RA;US)
SPES-2, an experimental program to support the AP600 development, 20:29760 (RA;US)

Reactor Accidents
Passive decay heat removal by natural air convection after severe accidents, 20:29654 (RA;US)
Simulation of the thermalhydraulic behavior of a molten core within a structure, with the three dimensions three components TOLBIAC code, 20:29718 (RA;US)

Reactor Components
Effectiveness of storage practices in mitigating aging degradation during reactor layup, 20:29777 (R;US)

Reactor Cooling Systems
A comparison of the CHF between tubes and annuli under PWR thermal-hydraulic conditions, 20:29473 (RA;US)
A formal approach for the prediction of the critical heat flux in subcooled water, 20:31233 (RA;US)
An investigation of transition boiling mechanisms of subcooled water under forced convective conditions, 20:29472 (RA;US)
Assessment of the advantages of a residual heat removal system inside the reactor pressure vessel, 20:29676 (RA;US)
Physical modelling of a rapid boron dilution transient, 20:29763 (RA;US)
RELAP5/MOD3 code manual. Volume 4, Models and correlations, 20:29773 (R;US)
The sudden coalescene model of the boiling crisis, 20:29470 (RA;US)

Reactor Core Disruption
On heat transfer characteristics of real and simulant melt pool experiments, 20:29653 (RA;US)

Reactor Operators
Knowledge and abilities catalog for nuclear power plant operators: Pressurized water reactors. Revision 1, 20:29469 (R;US)

Reactor Safety
The sensitivity analysis by adjoint method for the uncertainty evaluation of the CATHARE-2 code, 20:29728 (RA;US)
Transactions of the twenty-third water reactor safety information meeting to be held at Bethesda Marriott Hotel, Bethesda, Maryland, October 23–25, 1995, 20:29771 (R;US)

Reactor Vessels
Computational fluid dynamic analysis of a closure head penetration in a pressurized water reactor, 20:29644 (RA;US)
On heat transfer characteristics of real and simulant melt pool experiments, 20:29653 (RA;US)
Some thermohydraulics of closure head adapters in a 3 loops PWR, 20:29739 (RA;US)
The coolability limits of a reactor pressure vessel lower head, 20:29641 (RA;US)

Safety Analysis
Analysis of a small break loss-of-coolant accident of pressurized water reactor by APROS, 20:29740 (RA;US)
Assessment of the advantages of a residual heat removal system inside the reactor pressure vessel, 20:29676 (RA;US)
Development of a graphical user interface for the TRAC plant/safety analysis code, 20:29725 (RA;US)
INJECT and the modeling of waste recycling processes, 20:28904 (RA;US)
RELAP5 model to simulate the thermal-hydraulic effects of grid spacers and cladding rupture during reflood, 20:29747 (RA;US)
Small-break loss-of-coolant accidents in the updated PIUS 600 advanced reactor design, 20:29670 (RA;US)

Some thermohydraulics of closure head adapters in a 3 loops PWR, 20:29739 (RA;US)
The sensitivity analysis by adjoint method for the uncertainty evaluation of the CATHARE-2 code, 20:29728 (RA;US)
UPTF-TRAM experiments for SBLOCA: Evaluation of condensation processes in TRAM tests A6 and A7, 20:29629 (RA;US)

Scale Models
Analysis of an AP600 intermediate-size loss-of-coolant accident, 20:29674 (RA;US)
Application of UPTF data for modeling liquid draindown in the downcomer region of a PWR using RELAP5/MOD2-B&W, 20:29667 (RA;US)
SPES-2, AP600 intergral system test S01007 2 inch CL to core make-up tank pressure balance line break, 20:29762 (RA;US)
SPES-2, an experimental program to support the AP600 development, 20:29760 (RA;US)
Some thermohydraulics of closure head adapters in a 3 loops PWR, 20:29739 (RA;US)
UPTF-TRAM experiments for SBLOCA: Evaluation of condensation processes in TRAM tests A6 and A7, 20:29629 (RA;US)

Simulation
A practical view of the insights from scaling thermal-hydraulic tests, 20:29681 (RA;US)

Spacers
3-D flow analyses for design of nuclear fuel spacer, 20:29476 (RA;US)

Steam Generators
Analysis of steam generator loss-of-feedwater experiments with APROS and RELAP5/MOD3.1 computer codes, 20:29758 (RA;US)
CCFL in hot legs and steam generators and its prediction with the CATHARE code, 20:29652 (RA;US)
Coupled calculation of the radiological release and the thermal-hydraulic behavior of a 3-loop PWR after a SGTR by means of the code RELAP5, 20:29755 (RA;US)
Flooding characteristics of gas-liquid two-phase flow in a horizontal U bend pipe, 20:29651 (RA;US)
Horizontal steam generator thermal-hydraulics, 20:29475 (RA;US)
Two-phase velocity measurements around cylinders using particle image velocimetry, 20:29639 (RA;US)

Testing
NRC review of passive reactor design certification testing programs: Overview, progress, and regulatory perspective, 20:29677 (RA;US)

Transients
A concept of JAERI passive safety light water reactor system (JPSR), 20:29675 (RA;US)
Development and assessment of a modified version of RELAP5/MOD3, 20:29729 (RA;US)

Vapor Condensation
The modelling of wall condensation with noncondensable gases for the containment codes, 20:29693 (RA;US)

PWR/41 TYPE REACTORS
See WESTINGHOUSE STANDARD REACTOR

PWR/80 TYPE REACTORS
See CE STANDARD REACTOR

PYRENE
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, November 9, 1992–February 8, 1993, 20:28600 (R;US)
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, February 9, 1992–May 8, 1992, 20:28602 (R;US)
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, February 9, 1993–May 8, 1993, 20:28598 (R;US)
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, November 9, 1991–February 8, 1992, 20:28603 (R;US)
Fine particle clay catalysts for coal liquefaction. Quarterly technical progress report, May 9, 1992–August 8, 1992, 20:28601 (R;US)
Sorption and chemical transformation of PAHs on coal fly ash. Final technical report, 20:28671 (R;US)

PYRITE
Controlling incipient oxidation of pyrite for improved rejection. Eighth quarterly technical progress report, July 1, 1994–September 30, 1994, 20:28587 (R;US)
Controlling incipient oxidation of pyrite for improved rejection. Technical progress report for the ninth quarter, October 1–December 31, 1994, 20:28586 (R;US)
Sulfur transformations in early diagenetic sediments from the Bay of Concepcion, off Chile, 20:30845 (R;US)

PYRITES
See PYRITE

PYROELECTRIC DETECTORS
Materials preparation and fabrication of pyroelectric polymer/silicon MOSFET detector arrays. Final report, 20:30514 (R;US)

PYROLYSIS
Biomass fast pyrolysis, 20:29233 (RA;US)
Fast pyrolysis of pretreated wood, 20:29271 (RA;US)
Recycling of treated wood poles, 20:29268 (RA;US)
The feasibility of sustainable biomass energy production in Kansas, 20:29337 (RA;US)

PYROLYSIS PRODUCTS
See also CHARS
COAL GAS
MBMS of biomass pyrolysis vapors and catalytic upgrading, 20:29280 (RA;US)
The application of molecular beam mass spectrometry to the problem of plastics recycling through intelligent chemical processing, 20:29944 (RA;US)

PYROPHOSPHATES
Development of vanadium-phosphate catalysts for methanol production by selective oxidation of methane. Quarterly technical progress report 8, January–March, 1995, 20:28741 (R;US)

PYROTECHNIC DEVICES
An impulse radar array for detecting land mines, 20:30554 (R;US)
Statement of capabilities: Micropower Impulse Radar (MIR) technology applied to mine detection and imaging, 20:30552 (R;US)

PYROTEK PROCESS
See LOW BTU GAS
WASTE PROCESSING

PZT
Effects of solution precursor nature on sol-gel derived PZT thin film crystallization behavior and properties, 20:30183 (R;US)
Preparation of lead titanate zirconate from metal citrates, 20:30109 (I;BR;In Portuguese)

Q

QCD
See QUANTUM CHROMODYNAMICS

QUADRUPOLES
Automated beam based alignment of the ALS quadrupoles, 20:30493 (R;US)

QUALITY ASSURANCE
High Consequence System Surety process description, 20:29856 (R;US)
The role of risk-based prioritization in total quality management, 20:31310 (R;US)

QUANTITY RATIO
See CONCENTRATION RATIO

QUANTUM CHROMODYNAMICS
A study of the strong coupling constant using W+ jets processes, 20:30966 (R;US)
Constraints on "fixed point" QCD from the CCFR data on deep inelastic neutrino-nucleon scattering, 20:30969 (R;XA)
Gluon fragmentation into ^3P_J quarkonium, 20:31036 (R;AU)
Inclusive jet production at Tevatron, 20:30963 (R;US)
Selected topics in particle accelerators: Proceedings of the CAP meetings. Volume 3, 20:30359 (R;US)

QUANTUM ELECTRODYNAMICS
Enigmatic electrons, photons, and "empty" waves, 20:30958 (R;US)
N=1 super-Chern-Simons coupled to parity-preserving matter from Atiyah-Ward space-time, 20:30930 (R;XA)
Radiative corrections in (2 + 1) dimensional QED, 20:30983 (IA;BR)

QUANTUM FIELD THEORY

Calibration Standards
Asian/Australasian region intercalibration and intercomparison programme for radon, thoron and daughters. Asian/Australasian region radon intercomparison, September 1987 - September 1988, 20:29169 (R;AU)

Computer Codes
PC/FRAM: New capabilities for the gamma-ray spectrometry measurement of plutonium isotopic composition, 20:30516 (R;US)

Computerized Simulation
Hard scattering of partons as a probe of collisions at RHIC using the STAR detector system, 20:30529 (RA;US)
Heavy ion physics at LHC with the Compact Muon Solenoid, 20:30532 (RA;US)
Measurements of strangeness production in the STAR experiment at RHIC, 20:31084 (RA;US)
Measuring two-particle Bose-Einstein correlations with PHOBOS@RHIC, 20:31087 (RA;US)
Strangeness detection in ALICE experiment at LHC, 20:30530 (RA;US)

Data Acquisition Systems
Proceedings of the workshop on triggering and data acquisition for experiments at the Supercollider, 20:30524 (R;US)

Design
Hadron distributions at higher rapidity using the BRAHMS forward spectrometer, 20:30526 (RA;US)
PHOBOS physics capabilities, 20:30527 (RA;US)
Selected topics in particle accelerators: Proceedings of the CAP meetings. Volume 3, 20:30359 (R;US)
Status of the SLAC/LBL/LLNL B-Factory and the BaBar detector, 20:30412 (R;US)
Status of the SLAC/LBL/LLNL B-factory and the BABAR detector, 20:30494 (R;US)
Structural and phonon transmission study of Ge-Au-Ge eutectically bonded interfaces, 20:30520 (R;US)
The ALICE Inner Tracking System: Design, physics performance and R&D issues, 20:30533 (RA;US)
The measurement of hadronic observables with the solenoidal tracker at RHIC (STAR), 20:30528 (RA;US)

Electron Detection
Electron measurement in PHENIX, 20:31018 (RA;US)

Experiment Planning
PHOBOS physics capabilities, 20:30527 (RA;US)

F Codes
PC/FRAM: New capabilities for the gamma-ray spectrometry measurement of plutonium isotopic composition, 20:30516 (R;US)

Gamma Detection
A photo spectrometer PHOS for the ALICE experiment at the LHC, 20:30993 (RA;US)
PC/FRAM: New capabilities for the gamma-ray spectrometry measurement of plutonium isotopic composition, 20:30516 (R;US)
Photon physics with PHENIX, 20:30531 (RA;US)

Interlaboratory Comparisons
Asian/Australasian region intercalibration and intercomparison programme for radon, thoron and daughters. Asian/Australasian region radon intercomparison, September 1987 - September 1988, 20:29169 (R;AU)
Intercomparison of active and passive instruments for radon and radon progeny in North America, 20:30644 (R;US)

Operation
Hadron distributions at higher rapidity using the BRAHMS forward spectrometer, 20:30526 (RA;US)

P Codes
PC/FRAM: New capabilities for the gamma-ray spectrometry measurement of plutonium isotopic composition, 20:30516 (R;US)

Particle Identification
Particle identification using time-of-flight technology for the ALICE experiment, 20:30534 (RA;US)

Performance
Hard scattering of partons as a probe of collisions at RHIC using the STAR detector system, 20:30529 (RA;US)
Measurements of strangeness production in the STAR experiment at RHIC, 20:31084 (RA;US)
The ALICE Inner Tracking System: Design, physics performance and R&D issues, 20:30533 (RA;US)
The measurement of hadronic observables with the solenoidal tracker at RHIC (STAR), 20:30528 (RA;US)

Specifications
Strangeness detection in ALICE experiment at LHC, 20:30530 (RA;US)

Standards
Survey of portable radiological instrumentation at 16 DOE sites, 20:30535 (R;US)

Time-Of-Flight Method
Particle identification using time-of-flight technology for the ALICE experiment, 20:30534 (RA;US)

Trigger Circuits
Proceedings of the workshop on triggering and data acquisition for experiments at the Supercollider, 20:30524 (R;US)

Cost
Program cost and schedule baseline. Revision 5, (A00000000-00811-1701-00001), 20:28825 (R;US)

Criticality
Safety aspects with regard to plutonium vitrification techniques, 20:30321 (R;US)

Decommissioning
Quality Assurance Project Plan for the treatability study of in situ vitrification of Seepage Pit 1 in Waste Area Grouping 7 at Oak Ridge National Laboratory, 20:28912 (R;US)

Design
The mixed waste management facility. Monthly report, January 1995, 20:28973 (R;US)
Uranium Mill Tailings Remedial Action Project (UMTRAP), Slick Rock, Colorado, Revision 1, Volume 3. Calculations, Final design for construction, 20:29049 (R;US)

E Codes
Geothermal areas as analogues to chemical processes in the near-field and altered zone of the potential Yucca Mountain, Nevada repository, 20:28979 (R;US)

Engineering
The mixed waste management facility. Monthly report, 20:28974 (R;US)
The mixed waste management facility. Monthly report, January 1995, 20:28973 (R;US)

Environmental Impact Statements
Hazardous waste inventory, characteristics, generation, and facility assessment for treatment, storage, and disposal alternatives considered in the U.S. Department of Energy Waste Management Programmatic Environmental Impact Statement, 20:28794 (R;US)
High-level waste inventory, characteristics, generation, and facility assessment for treatment, storage, and disposal alternatives considered in the U.S. Department of Energy Environmental Management Programmatic Environmental Impact Statement, 20:28790 (R;US)
Low-level waste inventory, characteristics, generation, and facility assessment for treatment, storage, and disposal alternatives considered in the U.S. Department of Energy Waste Management Programmatic Environmental Impact Statement, 20:28792 (R;US)

Feasibility Studies
Source term modeling and analysis for vault/trench facilities located in an unsaturated zone, 20:28858 (R;JP)

Management
The mixed waste management facility. Monthly report, 20:28974 (R;US)

Mathematical Models
Issues related to estimating potential radiological doses from treatment, storage, and disposal facilities handling waste containing trace amounts of radioactive material, 20:28789 (R;US)

Modifications
Design Evaluation Process for Existing Waste Removal Design Documents, 20:29005 (R;US)

Operation
Developing operating procedures for a low-level radioactive waste disposal facility, 20:28814 (R;US)

Performance
Geothermal areas as analogues to chemical processes in the near-field and altered zone of the potential Yucca Mountain, Nevada repository, 20:28979 (R;US)
Introduction to radiological performance assessment, 20:28813 (R;US)

Radiation Doses
Issues related to estimating potential radiological doses from treatment, storage, and disposal facilities handling waste containing trace amounts of radioactive material, 20:28789 (R;US)

Remedial Action
Interim remedial measure proposed plan for the 200-UP-1 operable unit, Hanford, Washington, Revision 0, 20:29022 (R;US)
Synthesis, structural characterization, and performance evaluation of resorcinol-formaldehyde (R-F) ion-exchange resin, 20:28945 (R;US)

Risk Assessment
Evaluation of a potential nuclear fuel repository criticality: Lessons learned, 20:30287 (R;US)
Some concepts of model uncertainty for performance assessments of nuclear waste repositories, 20:28903 (RA;US)

Safety Analysis
Safety aspects with regard to plutonium vitrification techniques, 20:30321 (R;US)
Some concepts of model uncertainty for performance assessments of nuclear waste repositories, 20:28903 (RA;US)

Site Characterization
Hydrological and meteorological data for an unsaturated-zone study area near the Radioactive Waste Management Complex, Idaho National Engineering Laboratory, Idaho, 1988 and 1989, 20:28809 (R;US)

Source Terms
The comparison of element partitioning in two types of thermal treatment facilities and the effects on potential radiation dose, 20:28961 (R;US)

RADIOACTIVE WASTE MANAGEMENT

1995 Baseline solid waste management system description, 20:28944 (R;US)
A Study on the Establishment of Technical Standards of Radioactive Wastes, 20:29495 (R;KR;In Korean)
Draft Waste Management Programmatic Environmental Impact Statement for managing treatment, storage, and disposal of radioactive and hazardous waste. Summary, 20:28807 (R;US)
Life cycle cost estimation and systems analysis of Waste Management Facilities, 20:28838 (R;US)
Program cost and schedule baseline. Revision 5, (A00000000-00811-1701-00001), 20:28825 (R;US)
Radioactive and other environmental threats to the United States and the Arctic resulting from past Soviet activities, 20:28971 (R;US)
Source term modeling and analysis for vault/trench facilities located in an unsaturated zone, 20:28858 (R;JP)
System cost model user's manual, version 1.2, 20:28845 (R;US)
Waste Management Facilities cost information for low-level waste, 20:28831 (R;US)
Waste Management Facilities cost information for mixed low-level waste. Revision 1, 20:28832 (R;US)
Waste-Mgmt: A computer model for calculation of waste loads, profiles, and emissions, 20:28798 (R;US)

RADIOACTIVE WASTE PROCESSING

Buried Waste Integrated Demonstration fiscal Year 1994 closeout report, 20:28848 (R;US)
Chemical Technology Division annual technical report, 1994, 20:29847 (R;US)
Corrosion behavior of a simulated high-level radioactive waste glass under oxic and anoxic conditions, 20:28857 (R;JP;In Japanese)
Development of components for waste management systems using aerospace technology, 20:28818 (R;US)
Effects of soluble organic complexants and their degradation products on the removal of selected radionuclides from high-level waste. Part 3, Distributions of Sr, Cs, Tc, Pu, and Am onto 33 absorbers from four variations of a 3:1 dilution of Hanford complexant concentrate (CC) simulant: Part 4, The effects of varying dilution ratios on the distribut, 20:28860 (R;US)
Environmental Assessment for the Operation of the Glass Melter Thermal Treatment Unit at the US Department of Energy's Mound Plant, Miamisburg, Ohio, 20:29827 (R;US)
ICPP radioactive liquid and calcine waste technologies evaluation final report and recommendation, 20:28829 (R;US)
Information related to low-level mixed waste inventory, characteristics, generation, and facility assessment for treatment, storage, and disposal alternatives considered in the U.S. Department of Energy Waste Management programmatic environmental impact statement, 20:28799 (R;US)
International technology catalogue: Foreign technologies to support the environmental restoration and waste management needs of the DOE complex, 20:29111 (R;US)
Microwave technology for waste management applications including disposition of electronic circuitry, 20:28997 (R;US)
Mixed waste treatment model: Basis and analysis, 20:28861 (R;US)
PCB extraction from ORNL tank WC-14 using a unique solvent, 20:28919 (R;US)
Platelet-cooled plasma arc torch. Final report, 20:28819 (R;US)
Polyethylene encapsulation full-scale technology demonstration. Final report, 20:28802 (R;US)
Selected topics in particle accelerators: Proceedings of the CAP meetings. Volume 4, 20:30397 (R;US)
Synthesis, structural characterization, and performance evaluation of resorcinol-formaldehyde (R-F) ion-exchange resin, 20:28945 (R;US)
Vitrification of actinide solutions in SRS separations facilities, 20:29002 (R;US)

RADIOACTIVE WASTE STORAGE

1995 solid waste 30-year container volume summary, 20:28993 (R;US)
Addendum to the health and safety plan for Waste Area Grouping 6 at Oak Ridge National Laboratory, Oak Ridge, Tennessee. Environmental Restoration Program, 20:28908 (R;US)
Quarterly report on the Ferrocyanide Safety Program for the period ending June 30, 1995, 20:28989 (R;US)
Reliability evaluation methodologies for ensuring container integrity of stored transuranic (TRU) waste, 20:28841 (R;US)
Results of the gamma-neutron mapper performance test on 55-gallon drums at the RWMC, 20:28846 (R;US)
Site investigation report for Waste Area Grouping 4 at Oak Ridge National Laboratory. Volume 2, Appendixes: Environmental Restoration Program, 20:28915 (R;US)
Site investigation report for Waste Area Grouping 4 at Oak Ridge National Laboratory. Volume 1, Text: Environmental Restoration Program, 20:28914 (R;US)
Structural and seismic analyses of waste facility reinforced concrete storage vaults, 20:28801 (R;US)
Waste management and the land disposal restriction storage prohibition, 20:29153 (R;US)

Chemical Reactions
Chemical structure and dynamics. Annual report 1994, 20:29855 (R;US)

Classification
The CAMU Rule: A tool for implementing a protective, cost-effective remedy at the Fernald Environmental Management Project, 20:29088 (R;US)
Combustion
The comparison of element partitioning in two types of thermal treatment facilities and the effects on potential radiation dose, 20:28961 (R;US)
Corrosive Effects
Degradation of a N06690 borescope in a radioactive waste/glass melter system, 20:28999 (R;US)
Encapsulation
Polyethylene encapsulation full-scale technology demonstration. Final report. 20:28802 (R;US)
Environmental Effects
Analysis of nuclide transport under natural convection and time dependent boundary condition using TOUGH2, 20:28893 (RA;US)
Excavation
Results of performance tests on chemical and radiation measurement systems for use at a dig-face, 20:28834 (R;US)
Flammability
Gas bubble retention and its effect on waste properties: Retention mechanisms, viscosity, and tensile and shear strengths, 20:28943 (R;US)
Ground Disposal
Approach and plan for cleanup actions in the 100-FR-2 operable unit of the Hanford Site, Revision 0, 20:28824 (R;US)
Source term modeling and analysis for vault/trench facilities located in an unsaturated zone, 20:28858 (R;JP)
In-Situ Processing
Artificial magma program: Report on workshop held in Oak Ridge, Tennessee on March 29-30, 1994, 20:28918 (R;US)
Inventories
Waste-Mgmt: A computer model for calculation of waste loads, profiles, and emissions, 20:28798 (R;US)
Land Transport
Risk assessment for the on-site transportation of radioactive wastes for the U.S. Department of Energy Waste Management programmatic environmental impact statement, 20:28791 (R;US)
Minimization
Waste minimization through high-pressure microwave digestion of soils for gross α/β analyses, 20:28787 (R;US)
Pyrolysis
The comparison of element partitioning in two types of thermal treatment facilities and the effects on potential radiation dose, 20:28961 (R;US)
Qualitative Chemical Analysis
Preliminary 2D design study for A&PCT, 20:28980 (R;US)
Radioactive Waste Disposal
Operational Environmental Monitoring Program Quality Assurance Project Plan, 20:28990 (R;US)
Quarterly environmental radiological survey summary: Second Quarter 1995 100, 200, 300, and 600 Areas, 20:30764 (R;US)
Radioactive Waste Management
Federal Facility Compliance Act, Proposed Site Treatment Plan: Background Volume. Executive Summary, 20:28853 (R;US)
The unsaturated hydraulic characteristics of the Bandelier Tuff, 20:30718 (R;US)
Radioactive Waste Processing
Platelet-cooled plasma arc torch. Final report, 20:28819 (R;US)
Sodium carbonate salt transport system, 20:28987 (R;US)
Waste minimization through high-pressure microwave digestion of soils for gross α/β analyses, 20:28787 (R;US)
Radiometric Analysis
Operating new 55-gallon drum shufflers at Los Alamos, 20:28863 (R;US)
Recycling
INJECT and the modeling of waste recycling processes, 20:28904 (RA;US)
Remedial Action
Approach and plan for cleanup actions in the 100-FR-2 operable unit of the Hanford Site, Revision 0, 20:28824 (R;US)
Remote Sensing
Design and fabrication of a prototype sensor system for waste storage tank characterization. CRADA final report for CRADA Number ORNL92-0094, 20:28821 (R;US)
Research Programs
Chemical structure and dynamics. Annual report 1994, 20:29855 (R;US)
Rheology
Effect of colloidal aggregation on the sedimentation and rheological properties of tank waste, 20:28950 (R;US)
Sedimentation
Effect of colloidal aggregation on the sedimentation and rheological properties of tank waste, 20:28950 (R;US)
Solidification
Artificial magma program: Report on workshop held in Oak Ridge, Tennessee on March 29-30, 1994, 20:28918 (R;US)
Underground Disposal
Analysis of nuclide transport under natural convection and time dependent boundary condition using TOUGH2, 20:28893 (RA;US)
Buried Waste Integrated Demonstration fiscal Year 1994 closeout report, 20:28848 (R;US)
Flow reduction due to degassing and redissolution phenomena, 20:28898 (RA;US)
Gamma weld-logging in burial ground of the Savannah River Site, 20:29006 (R;US)
Strongly coupled single-phase flow problems: Effects of density variation, hydrodynamic dispersion, and first order decay, 20:30729 (RA;US)
Underground Storage
A human factors engineering evaluation of the Multi-Function Waste Tank Facility. Final report, 20:28994 (R;US)
Bayesian methods for the combination of core sampling data with historical models for tank characterization, 20:28938 (R;US)
Gas bubble retention and its effect on waste properties: Retention mechanisms, viscosity, and tensile and shear strengths, 20:28943 (R;US)
Ion exchange removal of cesium from simulated and actual supernate from Hanford tanks 241-SY-101 and 241-SY-103, 20:28959 (R;US)
Nondestructive examination technologies for inspection of radioactive waste storage tanks, 20:28850 (R;US)
Organic analysis of ambient samples collected near Tank 241-C-103: Results from samples collected on May 12, 1994, 20:28927 (R;US)
Preliminary analysis of tank 241-C-106 dryout due to large postulated leak and vaporization, 20:28896 (RA;US)
Thermal modeling of tanks 241-AW-101 and 241-AN-104 with the TEMPEST code, 20:28936 (R;US)
Vapor space characterization of waste tank 241-BX-104: Results from samples collected on 12/30/94, 20:28932 (R;US)
Vapor space characterization of waste tank 241-BY-110: Results for samples collected on 11/11/94, 20:28928 (R;US)
Vapor space characterization of waste tank 241-C-112: Results from samples collected on 8/11/94, 20:28933 (R;US)
Vapor space characterization of waste tank 241-S-102: Results from samples collected on 3/14/95, 20:28930 (R;US)
Vapor space characterization of waste tank 241-TY-103: Results from samples collected on 4/11/95, 20:28934 (R;US)
Vitrification
Artificial magma program: Report on workshop held in Oak Ridge, Tennessee on March 29-30, 1994, 20:28918 (R;US)
Redox reaction and foaming in nuclear waste glass melting, 20:28929 (R;US)
Vitrification melter study, 20:28808 (R;US)
Waste Transportation
Needs assessment activity report: April 1995, 20:28778 (R;US)

RADIOACTIVITY
After-action summary for handshake one, 20:30843 (R;US)
Coincidence-counting corrections for accidental coincidences, set dead time and intrinsic dead time, 20:29167 (R;AU)
Correction for intrinsic and set dead-time losses in radioactivity counting, 20:29168 (R;AU)
Lessons learned from FRMAC-93 exercise, 20:30633 (R;US)

Air
Study of air ingress accident of an HTGR, 20:29478 (RA;JP;In Japanese)

Computerized Simulation
RELAP5/MOD3 code manual. Volume 4, Models and correlations, 20:29773 (R;US)

Critical Heat Flux
A comparison of the CHF between tubes and annuli under PWR thermal-hydraulic conditions, 20:29473 (RA;US)
A formal approach for the prediction of the critical heat flux in subcooled water, 20:31233 (RA;US)
Correlation of critical heat flux data for uniform tubes, 20:29513 (RA;US)
The role of heater thermal response in reactor thermal limits during oscillartory two-phase flows, 20:29505 (RA;US)

Failures
Effects of LWR environments on fatigue life of carbon and low-alloy steels, 20:29992 (R;US)

Fatigue
Effects of LWR environments on fatigue life of carbon and low-alloy steels, 20:29992 (R;US)

Flow Blockage
Study on severe accident fuel dispersion behavior in the advanced neutron source reactor at Oak Ridge National Laboratory, 20:29766 (RA;US)

Htgr Type Reactors
Thermal analysis code for test of passive cooling system by helium engineering demonstration loop (HENDEL) in-core structure test section (T_2). THANPACST2, 20:29484 (R;JP;In Japanese)

Hydraulics
A criterion for the onset of slugging in horizontal stratified air-water countercurrent flow, 20:29613 (RA;US)

Natural Convection
Inherent safety advantages of carbide fuel systems and technical issues regarding natural convection in LMRs, 20:29583 (R;US)
Investigations on the thermal-hydraulics of a natural circulation cooled BWR fuel assembly, 20:29464 (RA;US)

Simulation
Level tracking in detailed reactor simulations, 20:29727 (RA;US)

Testing
AP600 design certification thermal hydraulics testing and analysis, 20:29611 (RA;US)
Study on mixed convective flow penetration into subassembly from reactor hot plenum in FBRs, 20:29683 (RA;US)

Transients
Physical modelling of a rapid boron dilution transient, 20:29763 (RA;US)

Transition Boiling
An investigation of transition boiling mechanisms of subcooled water under forced convective conditions, 20:29472 (RA;US)

Turbulent Flow
Turbulence prediction in two-dimensional bundle flows using large eddy simulation, 20:29511 (RA;US)

Two-Phase Flow
The role of heater thermal response in reactor thermal limits during oscillartory two-phase flows, 20:29505 (RA;US)
The sudden coalescene model of the boiling crisis, 20:29470 (RA;US)

Water Hammer
Water hammer phenomena occurring in nuclear power installations while filling horizontal pipe containing saturated steam with liquid, 20:29509 (RA;US)

REACTOR CORE DISRUPTION
Code package "SVECHA": Modeling of core degradation phenomena at severe accidents, 20:29720 (RA;US)
FARO base case post-test analysis by COMETA code, 20:29735 (RA;US)
Melcor benchmarking against integral severe fuel damage tests, 20:29744 (RA;US)
The modeling of core melting and in-vessel corium relocation in the APRIL code, 20:29719 (RA;US)

REACTOR CORE RESTRAINTS
Manufacturing status of the HTTR core internal structures, 20:29535 (RA;JP;In Japanese)

REACTOR CORES
A study of the effect of space-dependent neutronics on stochastically-induced bifurcations in BWR dynamics, 20:29753 (RA;US)
Development, implementation and assessment of specific, two-fluid closure laws for inverted-annular film-boiling, 20:29616 (RA;US)
Dynamics of shock wave propagation and interphase process in liquid-vapor medium, 20:29665 (RA;US)
Modeling and analysis framework for core damage propagation during flow-blockage-initiated accidents in the advanced neutron source reactor at Oak Ridge National Laboratory, 20:29769 (RA;US)
Quenching phenomena in natural circulation loop, 20:29633 (RA;US)
Thermal-hydraulics of wave propagation and pressure distribution under hypothetical steam explosion conditions in the ANS reactor, 20:29768 (RA;US)
Two-phase flow stability structure in a natural circulation system, 20:29658 (RA;US)

REACTOR FUEL ELEMENTS

Activation Energy
Apparent activation energy of subcritical crack growth of SiC/SiC composites at elevated temperatures, 20:30159 (RA;US)
Corrosion Protection
Oxide coating development, 20:30122 (RA;US)
Crack Propagation
Apparent activation energy of subcritical crack growth of SiC/SiC composites at elevated temperatures, 20:30159 (RA;US)
Fatigue crack growth rate (FCGR) behavior of nicalon/SiC composites, 20:30096 (RA;US)
Incubation time for sub-critical crack propagation in SiC-SiC composites, 20:30158 (RA;US)
Deformation
Shock-wave properties of brittle solids, 20:30140 (R;US)
Electronic Structure
Spectroscopic ellipsometry and band structure of $Si_{1-y}C_y$ alloys grown pseudomorphically on Si (001), 20:30165 (R;US)
Ellipsometry
Spectroscopic ellipsometry and band structure of $Si_{1-y}C_y$ alloys grown pseudomorphically on Si (001), 20:30165 (R;US)
Fabrication
Forced chemical vapor infiltration of tubular geometries: Modeling, design, and scale-up, 20:28676 (RA;US)
Fatigue
Fatigue crack growth rate (FCGR) behavior of nicalon/SiC composites, 20:30096 (RA;US)
Flame Spraying
High-deposition-rate ceramics synthesis, 20:30131 (RA;US)
Flexural Strength
Advanced SiC composites for fusion applications, 20:30156 (RA;US)
Final report for the ORNL/3M CRADA No. ORNL91-0061 for the period January 1, 1992–December 31, 1992, 20:30105 (R;US)
Hardness
Enhanced surface hardness in nitrogen-implanted silicon carbide, 20:30093 (R;US)
Ion Implantation
Enhanced surface hardness in nitrogen-implanted silicon carbide, 20:30093 (R;US)
Joining
Microwave joining of SiC, 20:30136 (RA;US)
Mechanical Properties
Development of oxidation/corrosion-resistant composite materials and interfaces, 20:30123 (RA;US)
Effects of neutron irradiation on dimensional stability and on mechanical properties of SiC/SiC composites, 20:30160 (RA;US)
Oxidation
Development of oxidation/corrosion-resistant composite materials and interfaces, 20:30123 (RA;US)
Photon Computed Tomography
Three-dimensional x-ray tomography of crack-resistant composites: New paradigms for process optimization, 20:30135 (RA;US)
Physical Radiation Effects
Effects of neutron irradiation on dimensional stability and on mechanical properties of SiC/SiC composites, 20:30160 (RA;US)

Thermal Conductivity
Advanced SiC composites for fusion applications, 20:30156 (RA;US)

SILICON COMPOUNDS
See also SILANES
SILICATES
SILICIDES
SILICON CARBIDES
SILICON NITRIDES
SILICON OXIDES
Synthesis and study of novel silicon-based unsaturated polymers, 20:30166 (R;US)

SILICON HYDRIDES
See SILANES

SILICON NITRIDES
Comparison of properties of sintered and sintered reaction-bonded silicon nitride fabricated by microwave and conventional heating, 20:30106 (R;US)
Development of microwave processing of silicon nitride components for advanced heat engine applications – Microwave annealing of silicon nitride with high additive contents. CRADA final report for CRADA Number ORNL90-0035, 20:30124 (R;US)
Friction and wear behavior of in-situ reinforced silicon nitride. Final report, 20:30103 (R;US)
Reciprocating sliding wear of in-situ reinforced silicon nitride, 20:30104 (R;US)

SILICON OXIDES
See also SILICA
Neutron and gamma irradiated optical property changes for the final optics of the National Ignition Facility, 20:31260 (R;US)

SILICON SEMICONDUCTOR DETECTORS
See SI SEMICONDUCTOR DETECTORS

SILICON SOLAR CELLS
Integrating photovoltaic cells into facade and roof elements, 20:29397 (IA;CH)
Microstructure of amorphous-silicon-based solar cell materials by small-angle x-ray scattering. Annual subcontract report, 6 April 1994–5 April 1995, 20:29394 (R;US)
Plasma analysis and diagnostics for high efficiency amorphous solar cell production. Final report, 20:29388 (R;US)
Progress in amorphous silicon PV technology: An update, 20:29395 (R;US)
Simplified fabrication of highly efficient crystalline silicon solar cells, 20:29391 (IA;CH)
Thin crystalline silicon solar cells, 20:29389 (IA;CH)

SILOXANES
Injectable barriers for waste isolation, 20:29098 (R;US)

SILVER
Production research progress report, February 16–29, 1948, 20:30241 (R;US)

SILVER ALLOYS
Dymalloy: A composite substrate for high power density electronic components, 20:30190 (R;US)

SILVER CHLORIDES
Production research progress report, February 16–29, 1948, 20:30241 (R;US)

SIMPLEX PROCESS
See COAL GASIFICATION

SIMS
See MASS SPECTROSCOPY

SIMULATORS
Validation of advanced NSSS simulator model for loss-of-coolant accidents, 20:29748 (RA;US)

SITE CHARACTERIZATION
Addendum to the health and safety plan for Waste Area Grouping 6 at Oak Ridge National Laboratory, Oak Ridge, Tennessee. Environmental Restoration Program, 20:28908 (R;US)
Final report on the Vitro CRADA, 20:29840 (R;US)
Site investigation report for Waste Area Grouping 4 at Oak Ridge National Laboratory. Volume 2, Appendixes: Environmental Restoration Program, 20:28915 (R;US)
Site investigation report for Waste Area Grouping 4 at Oak Ridge National Laboratory. Volume 1, Text: Environmental Restoration Program, 20:28914 (R;US)
Work plan for monitor well installation water and sediment sample collection aquifer testing and topographic surveying at the Riverton, Wyoming, UMTRA Project Site, 20:29066 (R;US)

SITE REHABILITATION
See REMEDIAL ACTION

SITE SURVEYS
See SITE CHARACTERIZATION

SKIN
Biological dosimetry by the radiation effects on the skin, 20:30830 (RA;JP;In Japanese)

SKYRME POTENTIAL
Non vibrating and vibrating skyrmions, 20:30943 (IA;BR;In Portuguese)
On the physical contents of the SU(2) Skyrme model, 20:30977 (IA;BR;In Portuguese)

SKYRMIONS
See SKYRME POTENTIAL
SOLITONS

SLABS
Dynamic response of the high flux isotope reactor structure caused by nearby heavy load drop, 20:29580 (R;US)

SLAGS
The comparison of element partitioning in two types of thermal treatment facilities and the effects on potential radiation dose, 20:28961 (R;US)

SLC
See STANFORD LINEAR COLLIDER

SLIGHTLY ENRICHED URANIUM
Evaluation of a potential nuclear fuel repository criticality: Lessons learned, 20:30287 (R;US)
Transportation environmental safety analysis of the commercial movement of low enriched uranium (LEU) from DOE sites to the Oak Ridge Y-12 Plant, 20:28783 (R;US)

SLUDGES
See also SEWAGE SLUDGE
Effect of colloidal aggregation on the sedimentation and rheological properties of tank waste, 20:28950 (R;US)
Gas bubble retention and its effect on waste properties: Retention mechanisms, viscosity, and tensile and shear strengths, 20:28943 (R;US)
Sedimentation models, 20:28948 (R;US)
Tank Waste Treatment Science Task quarterly report for January–March 1995, 20:28952 (R;US)
Tank Waste Treatment Science Task quarterly report for October–December 1994, 20:28951 (R;US)
Washing and caustic leaching of Hanford tank sludges: Results of FY 1995 studies, 20:28941 (R;US)

SLUGS (FUEL)
See FUEL RODS

SLURRIES (FUEL)
See FUEL SLURRIES

SM-2 REACTOR
Neutron flux spectra and radiation damage parameters for the Russian Bor-60 and SM-2 reactors, 20:29528 (RA;US)

SMALL BUSINESSES
Energy-saving tips for small businesses, 20:29904 (R;US)

SMARTOR DEVICE
See TOKAMAK DEVICES

SMELTERS
Chemical vapor infiltration of TiB_2 composites, 20:30130 (RA;US)

SMOG
Prediction of advected smog using weather forecast data of the Europa-Modell of the Deutscher Wetterdienst, 20:30658 (R;DE;In German)

SMOKY EVENT
See NUCLEAR EXPLOSIONS

SNPA-DEA PROCESS
See DESULFURIZATION

SO-2 GROUPS
On differential realizations of the so(1,2) Lie algebra and one-dimensional geometric potentials, 20:30858 (R;XA)

SODA ASH
See SODIUM CARBONATES
SODIUM ALLOYS
Parametric fits to 1-D neutron transport calculations for lithium-vanadium fusion power plant blankets in cylindrical and spherical geometries, 20:31242 (R;US)
SODIUM CARBONATES
Investigation of oil recovery improvement by coupling an interfacial tension agent and a mobility control agent in light oil reservoirs. Technical progress report, July 1995–September 1995, 20:28691 (R;US)
SODIUM CITRATES
See CITRATES
SODIUM COMPOUNDS
SODIUM COMPOUNDS
See also SODIUM CARBONATES
SODIUM HYDRIDES
SODIUM TUNGSTATES
Pilot-scale treatability testing – Recycle, reuse, and disposal of materials from decontamination and decommissioning activities: Soda blasting demonstration, 20:29075 (R;US)
Sodium dichromate expedited response action assessment, Revision 3, 20:29078 (R;US)
SODIUM COOLED REACTORS
See also BN-350 REACTOR
BOR-60 REACTOR
EBR-2 REACTOR
FFTF REACTOR
Analysis of overflow-induced sloshing in an elestic-wall vessel using physical component BFC method, 20:29682 (RA;US)
Evaluation of wrapper tube temperatures of fast neutron reactors using the TRANSCOEUR-2 code, 20:29686 (RA;US)
Large eddy simulation of mixing between hot and cold sodium flows - comparison with experiments, 20:29684 (RA;US)
Natural convection heat transfer on two horizontal cylinders in liquid sodium, 20:29685 (RA;US)
Simulation of decay heat removal by natural convection in a pool type fast reactor model-ramona-with coupled 1D/2D thermal hydraulic code system, 20:29687 (RA;US)
SODIUM HYDRIDES
Schottky defect formation energy of Alkali hydrides, 20:31118 (R;XA)
SODIUM LAURYL SULFATES
See SODIUM COMPOUNDS
SODIUM MINERALS
See MINERALS
SODIUM PHOSPHIDES
See SODIUM COMPOUNDS
SODIUM TUNGSTATES
Photo- and cathodoluminescence of hydrothermally synthesized $Y_3Al_5O_{12}$:Tb and $NaY(WO_4)_2$:Tb, 20:30146 (R;US)
SODIUM-WATER REACTIONS
See MOLTEN METAL-WATER REACTIONS
SOFC

SOIL CHEMISTRY
Study on the Utilization of Fly Ash as a Soil Amendment, 20:29445 (R;KR;In Korean)
SOIL-STRUCTURE INTERACTIONS
A plane strain model of soil saturation effect on dynamic stiffness functions of embedded footings, 20:30280 (R;US)
SOILS
Acidification
Ion leaching and soil acidification in a forest haplic podzol: Effects of nitrogen application and clear-cutting, 20:29351 (R;SE)
Carbon Isotopes
Soil gas survey in Shiratori region, No.C-1 report on the determination of prospective drilling, the ground survey of geothermal development promotion in fiscal 1992, 20:29415 (R;JP;In Japanese)
Chemical Analysis
Description of work for vadose zone characterization of the 1301-N and 1325-N liquid waste disposal facilities, 20:28823 (R;US)
Final report, Ames Mobile Laboratory Project: The development and operation of instrumentation in a mobile laboratory for in situ, real-time screening and characterization of soils using the laser ablation sampling technique, 20:29026 (R;US)
Contamination
A field test of permeation grouting in heterogeneous soils using a new generation of barrier liquids, 20:30738 (R;US)
Horizontal grout barrier project results of the latest testing, 20:29089 (R;US)
Livermore Big Trees Park Soil Survey, 20:30755 (R;US)
Numerical simulations of multicomponent evaporation and gas-phase transport using M^2NOTS, 20:30732 (RA;US)
Radionuclide contaminant analysis of small mammals at Area G, TA-54, 1994, 20:29027 (R;US)
Rapid assessment of soil and groundwater tritium by vegetation sampling, 20:30767 (R;US)
Soil remediation by heat injection: Experiments and numerical modelling, 20:30727 (RA;US)
The effect of vadose zone heterogeneities on vapor phase migration and aquifer contamination by volatile organics, 20:30733 (RA;US)
Verification of T2VOC using an analytical solution for VOC transport in vadose zone, 20:30731 (RA;US)
Zero-tension lysimeters: An improved design to monitor colloid-facilitated contaminant transport in the vadose zone, 20:30713 (R;US)
Fertility
Sludge application and monitoring program on the Oak Ridge Reservation, 1986 through 1993, 20:29953 (R;US)
Gas Analysis
Soil gas survey in Shiratori region, No.C-1 report on the determination of prospective drilling, the ground survey of geothermal development promotion in fiscal 1992, 20:29415 (R;JP;In Japanese)
Geochemistry
Soil gas survey in Shiratori region, No.C-1 report on the determination of prospective drilling, the ground survey of geothermal development promotion in fiscal 1992, 20:29415 (R;JP;In Japanese)
Geophysical Surveys
Soil gas survey in Shiratori region, No.C-1 report on the determination of prospective drilling, the ground survey of geothermal development promotion in fiscal 1992, 20:29415 (R;JP;In Japanese)
Infrared Thermography
Measurement of directional thermal infrared emissivity of vegetation and soils, 20:30704 (R;US)
Isotope Dilution
Evaluation of the biological nitrogen fixation (N_2) contribution in several forage legumes and the transfer of N to associated grasses, 20:30813 (I;BR;In Portuguese)
Mercury
Soil gas survey in Shiratori region, No.C-1 report on the determination of prospective drilling, the ground survey of geothermal development promotion in fiscal 1992, 20:29415 (R;JP;In Japanese)
Monitoring
1994 Site Environmental Report, 20:28890 (R;US)
Nitrogen 15
Evaluation of the biological nitrogen fixation (N_2) contribution in several forage legumes and the transfer of N to associated grasses, 20:30813 (I;BR;In Portuguese)
Nitrogen Fixation
Evaluation of the biological nitrogen fixation (N_2) contribution in several forage legumes and the transfer of N to associated grasses, 20:30813 (I;BR;In Portuguese)
Pollution
Sequential extraction evaluation of heavy-metal-contaminated soil: How clean is clean?, 20:30685 (R;US)
Radiation Monitoring
Sitewide feasibility study Eielson Air Force Base, Alaska, 20:29107 (R;US)

Radioecological Concentration
Radionuclide concentrations in terrestrial vegetation and soil on and around the Hanford Site, 1983 through 1993, 20:30745 (R;US)

Radionuclide Migration
Emergency radiological monitoring and analysis: Federal Radiological Monitoring and Assessment Center, 20:29086 (R;US)
Gamma weld-logging in burial ground of the Savannah River Site, 20:29006 (R;US)
Rapid assessment of soil and groundwater tritium by vegetation sampling, 20:30767 (R;US)

Remedial Action
Injectable barriers for waste isolation, 20:29098 (R;US)
Natural and accelerated bioremediation research program plan, 20:29072 (R;US)
Numerical simulations of multicomponent evaporation and gas-phase transport using M²NOTS, 20:30732 (RA;US)
Preliminary analysis of NAPL behavior in soil-heated vapor extraction for in-situ environmental restoration, 20:29114 (R;US)
Proposed plan for interim remedial measures at the 100-HR-1 Operable Unit, Hanford Site, Richland, Washington, 20:29082 (R;US)
Proposed plan for interim remedial measures at the 100-KR-1 Operable Unit. Revision 1, 20:29083 (R;US)
Sequential extraction evaluation of heavy-metal-contaminated soil: How clean is clean?, 20:30685 (R;US)
Soil remediation by heat injection: Experiments and numerical modelling, 20:30727 (RA;US)
Soil washing pilot plant treatability test for the 100-DR-1 Operable Unit, 20:29084 (R;US)
The effect of vadose zone heterogeneities on vapor phase migration and aquifer contamination by volatile organics, 20:30733 (RA;US)
Verification of T2VOC using an analytical solution for VOC transport in vadose zone, 20:30731 (RA;US)
Waste minimization through high-pressure microwave digestion of soils for gross α/β analyses, 20:28787 (R;US)

Sampling
Description of work for vadose zone characterization of the 1301-N and 1325-N liquid waste disposal facilities, 20:28823 (R;US)

Sorptive Properties
Transport and sorption of volatile organic compounds and water vapor in porous media, 20:30737 (R;US)

Ventilation Systems
Numerical simulations of multicomponent evaporation and gas-phase transport using M²NOTS, 20:30732 (RA;US)

Vitrification
Defining the Glass Composition Limits for SRS Contaminated Soils, 20:28998 (R;US)

Washing
Genesis Eco Systems, Inc. soil washing process, 20:30753 (R;US)
Soil washing pilot plant treatability test for the 100-DR-1 Operable Unit, 20:29084 (R;US)

SOLAR ATMOSPHERE

SUBCRITICAL ASSEMBLIES
Coordinated Research Programs
Accelerator driven reactors and nuclear waste management projects in the Czech Republic, 20:28880 (RA;US)
Design
An acclerator-based installation of small power with the lead-bismuth coolant, 20:29546 (RA;US)
An overview of Russian experience and capabilities for development of ATW/ABC systems, 20:28874 (RA;US)
Combining a gas turbine modular helium reactor and an accelerator and for near total destruction of weapons grade plutonium, 20:29131 (RA;US)
Conception of electron beam-driven subcritical molten salt ultimate safety reactor, 20:29544 (RA;US)
Design considerations and evaluations of an accelerator-driven fluid fuel transmuter, 20:29545 (RA;US)
ITEP Subcritical Neutron Generator driven by charged particle accelerator, 20:29542 (RA;US)
On the ATW-concepts: ITP approach and opportunities, 20:28875 (RA;US)
Some basic advantages of accelerator-driven transmutation of minor actinides and iodine-129, 20:29563 (RA;US)
The concept of the double-purpose electro-nuclear facility, 20:29554 (RA;US)
The physics design of accelerator-driven transmutation systems, 20:28871 (RA;US)
Transmutation of fission products and actinide waste at Hanford, 20:29562 (RA;US)
Waste transmutation with minimal fuel cycle long-term risk, 20:28873 (RA;US)
"Transmutation efficiency calculation in the blanket on melted salts with central neptunium target", 20:29548 (RA;US)
Equilibrium
Transmutation and inventory analysis in an ATW molten salt system, 20:29553 (RA;US)
Feasibility Studies
Accelerator-based transmuter-breeder and energy producer from transuranic actinides and thorium, 20:29550 (RA;US)
Subcritical neutron generator-test facility for nuclear waste transmutation studies, 20:29561 (RA;US)
Isotope Production
A proton-driven, intense, subcritical, fission neutron source for radioisotope production, 20:29547 (RA;US)

Power Generation
An acclerator-based installation of small power with the lead-bismuth coolant, 20:29546 (RA;US)
Productivity
The influence of external source intensity in accelerator/target/blanket system on conversion ratio and fuel cycle, 20:29555 (RA;US)
Reactivity
Transmutation and inventory analysis in an ATW molten salt system, 20:29553 (RA;US)
Reactor Control Systems
Safety and control of accelerator-driven subcritical systems, 20:29588 (RA;US)
Reactor Lattice Parameters
Transmutation of fission products and actinide waste at Hanford, 20:29562 (RA;US)
Reactor Safety
Conception of electron beam-driven subcritical molten salt ultimate safety reactor, 20:29544 (RA;US)
Safety and control of accelerator-driven subcritical systems, 20:29588 (RA;US)
Safety features of subcritical fluid fueled systems, 20:29589 (RA;US)
Some nuclear safety aspects of the Los Alamos accelerator based converion concept, 20:29590 (RA;US)
The neutronics of an Accelerator-Driven Energy Amplifier, 20:29591 (RA;US)
Research Programs
Status of electro-nuclear facilities development in ITEP, 20:29130 (RA;US)
Risk Assessment
Waste transmutation with minimal fuel cycle long-term risk, 20:28873 (RA;US)
Safety Analysis
Accelerator-driven nuclear synergetic systems-an overview of the research activities in Sweden, 20:28876 (RA;US)
Safety features of subcritical fluid fueled systems, 20:29589 (RA;US)
Specifications
The concept of the double-purpose electro-nuclear facility, 20:29554 (RA;US)
Temperature Coefficient
Some nuclear safety aspects of the Los Alamos accelerator based converion concept, 20:29590 (RA;US)
The neutronics of an Accelerator-Driven Energy Amplifier, 20:29591 (RA;US)
Xenon Oscillations
Actinide and Xenon reactivity effects in ATW high flux systems, 20:29552 (RA;US)

SUBCRITICALITY

THORIUM
800-MeV proton irradiation of thorium and depleted uranium targets, 20:31072 (RA;US)
Crystal structure of actinide metals at high compression, 20:30085 (R;US)

THORIUM COMPOUNDS
LANL sunnyside experiment: Study of neutron production in accelerator-driven targets, 20:31071 (RA;US)

THORIUM DEPOSITS
Change of the natural radiation exposure due to agriculture and industrial activities in a high natural radioactivity area from Brazil, 20:30824 (I;BR;In Portuguese)

THORIUM ISOTOPES
Status of nuclear data for actinides, 20:31077 (RA;US)

THREE MILE ISLAND-2 REACTOR
Turning points in reactor design, 20:29609 (RA;US)

THYLOX PROCESS
See DESULFURIZATION

THYROID
Reconstruction of thyroid doses for the population of Belarus following the Chernobyl accident, 20:30835 (R;US)

THYROXINE
Serum levels of triiodothyronine (T_3) and thyroxine (T_4) in buffalo (Bubalus bubalis Lin.) raised in Amazon region, 20:30814 (I;BR;In Portuguese)

TIGHT SANDS
See PERMEABILITY
SANDSTONES

TIME DEPENDENCE
Microscopic time-reversibility and macroscopic irreversibility: Still a paradox, 20:30865 (R;US)
The PEP-II design, 20:30413 (R;US)

TIME-REVERSAL INVARIANCE
See T INVARIANCE

TIN 126 TARGET
Direct irradiation of long-lived fission products in an ATW system, 20:28883 (RA;US)

TIN ALLOYS
See also BRONZE
Electronic properties of U_2Pt_2Sn, 20:30041 (R;US)
Electronic properties of UCuSn, 20:30043 (R;US)

TIN OXIDES
Biomimetic thin film synthesis, 20:30182 (RA;US)

TIOGA NITROGEN REMOVAL PROCESS
See NITROGEN

TITANIUM
{11-bar 01} twin dislocation structures in evaporated titanium thin films, 20:30087 (R;AU)
An experimental method for investigating phase transformations in the heat affected zone of welds using synchrotron radiation, 20:30082 (R;US)
Characterization of three-way automotive catalysts, 20:30129 (RA;US)
Hypervelocity impact phenomena, 20:30351 (R;US)

TITANIUM ALLOYS
Atomic Displacements
Ductile-brittle transition behavior of V-4Cr-4Ti irradiated in the dynamic helium charging experiment, 20:30020 (RA;US)
Effect of dynamically charged helium on tensile properties of V-4Cr-4Ti, 20:30019 (RA;US)
Preliminary report on the irradiation conditions of the HFIR JP-23 experiment, 20:30003 (RA;US)
Corrosion
Chemical compatibility of structural materials in alkali metals, 20:30023 (RA;US)
U.S. Contribution 1994 Summary Report Task T12: Compatibility and irradiation testing of vanadium alloys, 20:29993 (R;US)
Density
Void structure and density change of vanadium-base alloys irradiated in the dynamic helium charging experiment, 20:30021 (RA;US)
Dislocations
Dislocation development in V-5CR-5TI and pure vanadium, 20:30013 (RA;US)
Ductile-Brittle Transitions
Ductile-brittle transition behavior of V-4Cr-4Ti irradiated in the dynamic helium charging experiment, 20:30020 (RA;US)
Electron Beam Welding
Welding development for V-Cr-Ti alloys, 20:30012 (RA;US)
Fabrication
Fabrication of 500-kg heat of V-4Cr-4Ti, 20:30015 (RA;US)

Fatigue
Fatigue behavior of unirradiated V-5Cr-5Ti, 20:30011 (RA;US)
Fracture Properties
Effect of heat treatment on microstructure and fracture toughness of a V-5Cr-5Ti alloy, 20:30014 (RA;US)
Vanadium alloy irradiation experiment X530 in EBR-II*, 20:30000 (RA;US)
Hardness
Hardness recovery of 85% cold-worked V-Ti and V-Cr-Ti alloys upon annealing at 180°C to 1200°C, 20:30017 (RA;US)
Hydrogen Embrittlement
Chemical and mechanical interactions of interstitials in V-5%Cr-5%Ti, 20:30010 (RA;US)
Impact Strength
Impact properties of 500-kg heat of V-4Cr-4Ti, 20:30016 (RA;US)
Interstitial Helium Generation
Effect of dynamically charged helium on tensile properties of V-4Cr-4Ti, 20:30019 (RA;US)
U.S. Contribution 1994 Summary Report Task T12: Compatibility and irradiation testing of vanadium alloys, 20:29993 (R;US)
Void structure and density change of vanadium-base alloys irradiated in the dynamic helium charging experiment, 20:30021 (RA;US)
Irradiation
Preliminary report on the irradiation conditions of the HFIR JP-23 experiment, 20:30003 (RA;US)
Mechanical Properties
Low-mass, intrinsically-hard high-temperature radiator. Final report, Phase I, 20:29489 (R;US)
Microstructure
Chemical compatibility of structural materials in alkali metals, 20:30023 (RA;US)
Effect of heat treatment on microstructure and fracture toughness of a V-5Cr-5Ti alloy, 20:30014 (RA;US)
Hardness recovery of 85% cold-worked V-Ti and V-Cr-Ti alloys upon annealing at 180°C to 1200°C, 20:30017 (RA;US)
Void structure and density change of vanadium-base alloys irradiated in the dynamic helium charging experiment, 20:30021 (RA;US)
Oxidation
Chemical and mechanical interactions of interstitials in V-5%Cr-5%Ti, 20:30010 (RA;US)
Effect of oxidation on tensile behavior of V-5Cr-5Ti alloy, 20:30018 (RA;US)
Physical Properties
U.S. Contribution 1994 Summary Report Task T12: Compatibility and irradiation testing of vanadium alloys, 20:29993 (R;US)
Physical Radiation Effects
Vanadium alloy irradiation experiment X530 in EBR-II*, 20:30000 (RA;US)
Temperature Dependence
Fatigue behavior of unirradiated V-5Cr-5Ti, 20:30011 (RA;US)
Tensile Properties
Chemical and mechanical interactions of interstitials in V-5%Cr-5%Ti, 20:30010 (RA;US)
Dislocation development in V-5CR-5TI and pure vanadium, 20:30013 (RA;US)
Effect of dynamically charged helium on tensile properties of V-4Cr-4Ti, 20:30019 (RA;US)
Effect of oxidation on tensile behavior of V-5Cr-5Ti alloy, 20:30018 (RA;US)
TITANIUM BORIDES
Chemical vapor infiltration of TiB_2 composites, 20:30130 (RA;US)
Low-mass, intrinsically-hard high-temperature radiator. Final report, Phase I, 20:29489 (R;US)
TITANIUM CARBIDES
Metallic and intermetallic-bonded ceramic composites, 20:30132 (RA;US)
TITANIUM COMPLEXES
Trivalent metallocene chemistry of some uranium, titanium, and zirconium complexes, 20:30240 (R;US)
TITANIUM IONS
Collisional excitation among the seven lowest states of TiXII, 20:31106 (R;XA)
Measurement of the temperature of cold highly charged ions produced in an electron beam ion trap, 20:30873 (R;US)
TITANIUM OXIDES
Elementary excitations and phase transitions in crystals, 20:31115 (R;US)
Inversion of electron scattering intensity for crystal structure analysis, 20:31132 (R;AU)
Luminescence and photoconversion of solar energy, 20:30249 (RA;CH)
Synthesis, characterization and application of electrode materials, 20:30245 (R;US)
TITANIUM SILICIDES
Effect of ternary additions on the oxidation resistance of Ti_5Si_3, 20:30112 (R;US)
TOBACCO SMOKES
Personal exposure to environmental tobacco smoke in workplace and away from work settings: A 16 city case study, 20:30695 (R;US)
TOKAMAK DEVICES

JT-60U TOKAMAK
TFTR TOKAMAK
TORE SUPRA TOKAMAK
WT-3 TOKAMAK
A Landau fluid model for dissipative trapped electron modes, 20:31190 (R;US)
Modelling multi-ion plasma gun simulations of Tokamak disruptions, 20:31154 (R;US)
Normal-zone detection in tokamak superconducting magnets with Co- wound voltage sensors, 20:31262 (R;US)
Potential safe termination by injection of polypropylene pellets in JET, 20:31208 (R;US)
TOKAMAK FUSION TEST REACTOR
See TFTR TOKAMAK
TOKAMAK TYPE REACTORS
See also ITER TOKAMAK
Electron cyclotron heating and current drive: Present experiments to ITER. Revision 1, 20:31161 (R;US)
TOLUENE
Molecular catalytic coal liquid conversion. Quarterly report, 20:28607 (R;US)
Sorption and chemical transformation of PAHs on coal fly ash. Final technical report, 20:28671 (R;US)
TOMOGRAPHY
See also COMPUTERIZED TOMOGRAPHY
An impulse radar array for detecting land mines, 20:30554 (R;US)
Statement of capabilities: Micropower Impulse Radar (MIR) technology applied to mine detection and imaging, 20:30552 (R;US)
TOOLS
See also MACHINE TOOLS
Radioactive decontamination of metals by electropolishing, 20:30059 (R;US)
TOP ACCIDENTS
See TRANSIENT OVERPOWER ACCIDENTS
TOP PARTICLES
See also T QUARKS
CDF top quark production and mass, 20:31026 (R;US)
Measurements of $\Gamma(Z^0 \rightarrow b\bar{b})/\Gamma(Z^0 \rightarrow \text{hadrons})$ using the SLD, 20:31017 (R;US)
Transverse polarization of top quarks produced at a photon-photon collider, 20:31033 (R;AU)
TOP QUARK MODEL
See FLAVOR MODEL
TOPOGRAPHY
An Automated Land Analysis System (ALAS) for applications at a range of spatial scales: Watershed to global, 20:30760 (R;US)
TOPSOE-SNPA PROCESS
See DESULFURIZATION
TOR DEVICES
See STELLARATORS

TORE SUPRA
See TORE SUPRA TOKAMAK
TORE SUPRA TOKAMAK
Particle exhaust of helium plasmas with actively cooled outboard pump limiter on Tore Supra, 20:31234 (R;US)
TORSATRON STELLARATORS
See also CHS TORSATRON
Technology development for LHD ICRF(ion cyclotron range frequencies) heating, 20:31164 (RA;JP)
TOTAL-ABSORPTION SPECTROMETERS
See SHOWER COUNTERS
TOUGHNESS (FRACTURE)
See FRACTURE PROPERTIES
TOXIC MATERIALS
Cells on foam and fiber, 20:29231 (RA;US)
Chemical process safety management within the Department of Energy, 20:29109 (R;US)
TRACE AMOUNTS
RAT: A computational tool for retrieval of atmospheric trace gas profiles from infrared spectra, 20:30659 (R;DE)
The airborne remote sensing experiment MIPAS-FT: data analysis and interpretation of the artic campaigns 1991/92 and 1992/93, 20:30557 (R;DE;In German)
TRACE ELEMENTS
See TRACE AMOUNTS
TRACER TECHNIQUES
The use of stable isotopes in ecological research: tracking the nitrogen fluxes of airborne NO_2 in plants, 20:30232 (RA;CH)
TRACKS

TRUCKS
Alternative-fueled truck demonstration natural gas program: Caterpillar G3406LE development and demonstration, 20:29978 (R;US)
Anticipatory precrash restraint sensor feasibility study: Final report, 20:29922 (R;US)
On-road testing of rapeseed biodiesel, 20:29308 (RA;US)
Recommendations for a commercial vehicle to roadway communications national standard, 20:29923 (R;US)

TRUEX PROCESS
Extraction of nitric acid, uranyl nitrate, and bismuth nitrate from aqueous nitric acid solutions with CMPO, 20:28907 (R;US)
TRUEX partitioning from radioactive ICPP sodium bearing waste, 20:28842 (R;US)

TRUTH MODEL
See FLAVOR MODEL

TRYPTOPHAN
Biosynthesis of indigo using recombinant E. coli: Development of a biological system for the cost-effective production of a large volume chemical, 20:29364 (RA;US)

TSL PROCESS
Catalysts and process development for two-stage liquefaction. First quarterly report, January 1, 1992–March 31, 1992, 20:28596 (R;US)
Catalysts and process developments for two-stage liquefaction. Second quarterly progress report, April 1, 1992–June 30, 1992, 20:28597 (R;US)

TUBERS
Sunspuds™: A new sugar crop for producing ethanol fuel, 20:29232 (RA;US)

TUBES
See also PRESSURE TUBES
ASTRID: A 3D Eulerian software for subcooled boiling modelling - comparison with experimental results in tubes and annuli, 20:29647 (RA;US)
An investigation of condensation from steam-gas mixtures flowing downward inside a vertical tube, 20:29624 (RA;US)
CCFL in hot legs and steam generators and its prediction with the CATHARE code, 20:29652 (RA;US)
Drift flux model as approximation of two fluid model for two phase dispersed and slug flow in tube, 20:29615 (RA;US)
Evaluation of a main steam line break with induced, multiple tube ruptures: A comparison of NUREG 1477 (Draft) and transient methodologies Palo Verde Nuclear Generating Station, 20:29666 (RA;US)
Evaluation of wrapper tube temperatures of fast neutron reactors using the TRANSCOEUR-2 code, 20:29686 (RA;US)
Flooding characteristics of gas-liquid two-phase flow in a horizontal U bend pipe, 20:29651 (RA;US)
Two-phase velocity measurements around cylinders using particle image velocimetry, 20:29639 (RA;US)
Velocity of large bubble in liquid-solid mixture in a vertical tube, 20:29618 (RA;US)

TUBES (CONDUITS)
See PIPES

TUFF
A sensitivity analysis of the WIPP disposal room model: Phase 1, 20:29032 (R;US)
Estimation of hydraulic conductivities of Yucca Mountain tuffs from sorptivity and water retention measurements, 20:28900 (R;US)
Hydraulic characterization of hydrothermally altered Nopal tuff, 20:28906 (R;US)
Hydrologic property alterations due to elevated temperatures at Yucca Mountain, 20:29011 (R;US)
Joint orientation and characteristics as observed in a trench excavated near TA-3 and a basement excavated at TA-55, 20:30719 (R;US)
The unsaturated hydraulic characteristics of the Bandelier Tuff, 20:30718 (R;US)
WIPP Benchmark calculations with the large strain SPECTROM codes, 20:29033 (R;US)

TUMORS
See NEOPLASMS

TUNGSTEN
Evaluations for the choice of the best target material in a accelerator-driven reactor, 20:30459 (RA;US)
LANL sunnyside experiment: Study of neutron production in accelerator-driven targets, 20:31071 (RA;US)

TUNGSTEN ALLOYS
Embrittlement of Cr-Mo steels after low fluence irradiation in HFIR, 20:30008 (RA;US)

TUNGSTEN CARBIDES
Metallic and intermetallic-bonded ceramic composites, 20:30132 (RA;US)

TUNNELS
Investigation of potential water inflow into a ventilated tunnel of the proposed low/intermediate-level waste repository in Switzerland, 20:28894 (RA;US)

TURBINE BLADES
Dynamic stall occurrence on a horizontal axis wind turbine blade, 20:29424 (R;US)

TURBINES
See also GAS TURBINES
Development of the Advanced Turbine Supervisory Instrument of Power Plants, 20:29427 (R;KR;In Korean)

TURBULENCE
Numerical simulations of turbulent dispersion around buildings via a lagrangian stochastic particle model, 20:30681 (R;US)

TURBULENT FLOW
Derivation of a macroscale formulation for a class of nonlinear partial differential equations, 20:31312 (R;AU)
Progress in sub-grid scale modeling of shock-turbulence interaction, 20:31379 (R;US)
Turbulence prediction in two-dimensional bundle flows using large eddy simulation, 20:29511 (RA;US)

TVO-1 REACTOR
Severe accident simulation at Olkiuoto, 20:29749 (RA;US)

TWO-DIMENSIONAL CALCULATIONS
Angular biasing in implicit Monte-Carlo, 20:31277 (R;US)

TWO-PHASE FLOW
A chaotic system of two-phase flow in a small, horizontal, rectangular channel, 20:30332 (R;US)

C Codes
CFD prediction of flow and phase distribution in fuel assemblies with spacers, 20:29643 (RA;US)
The multi-dimensional module of CATHARE 2 description and application, 20:29648 (RA;US)

Computer Codes
A thermal-hydraulic code for transient analysis in a channel with a rod bundle, 20:29673 (RA;US)

Computerized Simulation
A general unified non-equilibrium model for predicting saturated and subcooled critical two-phase flow rates through short and long tubes, 20:29621 (RA;US)
CFD prediction of flow and phase distribution in fuel assemblies with spacers, 20:29643 (RA;US)
Numerical simulation of multi-dimensional two-phase flow based on flux vector splitting, 20:29642 (RA;US)
Predictions of bubbly flows in vertical pipes using two-fluid models in CFDS-FLOW3D code, 20:29622 (RA;US)

Computerized Tomography
Cross-sectional void fraction distribution measurements in a vertical annulus two-phase flow by high speed X-ray computed tomography and real-time neutron radiography techniques, 20:29638 (RA;US)

Differential Equations
A mechanistic determination of horizontal flow regime bound using void wave celerity, 20:29612 (RA;US)

Flow Models
A mechanistic determination of horizontal flow regime bound using void wave celerity, 20:29612 (RA;US)

Instability
Dynamics of shock wave propagation and interphase process in liquid-vapor medium, 20:29665 (RA;US)
FIBWR2 evaluation of fuel thermal limits during density wave oscillaions in BWRs, 20:29659 (RA;US)
Two-phase flow instabilities in a vertical annular channel, 20:29661 (RA;US)

Mathematical Models
A simple delay model for two-phase flow dynamics, 20:29515 (RA;US)
A thermal-hydraulic code for transient analysis in a channel with a rod bundle, 20:29673 (RA;US)
Analysis of two-phase flow inter-subchannel mass and momentum exchanges by the two-fluid model approach, 20:29462 (RA;US)
GEYSER/TONUS: A coupled multi-D lumped parameter code for reactor thermal hydraulics analysis in case of severe accidents, 20:29700 (RA;US)
Numerical simulation of multi-dimensional two-phase flow based on flux vector splitting, 20:29642 (RA;US)
The sudden coalescene model of the boiling crisis, 20:29470 (RA;US)

Navier-Stokes Equations
Analytical solution of laminar-laminar stratified two-phase flows with curved interfaces, 20:29617 (RA;US)

Neutron Radiography
Cross-sectional void fraction distribution measurements in a vertical annulus two-phase flow by high speed X-ray computed tomography and real-time neutron radiography techniques, 20:29638 (RA;US)

Numerical Analysis
Entropy analysis on non-equilibrium two-phase flow models, 20:29620 (RA;US)

Oscillations
FIBWR2 evaluation of fuel thermal limits during density wave oscillaions in BWRs, 20:29659 (RA;US)
Modeling and numerical simulation of oscillatory two-phase flows, with application to boiling water nuclear reactors, 20:29663 (RA;US)

Statistical Models
About the statistical description of gas-liquid flows, 20:29619 (RA;US)

Subcooled Boiling
ASTRID: A 3D Eulerian software for subcooled boiling modelling - comparison with experimental results in tubes and annuli, 20:29647 (RA;US)

Thermodynamics
Entropy analysis on non-equilibrium two-phase flow models, 20:29620 (RA;US)

Void Fraction
Cross-sectional void fraction distribution measurements in a vertical annulus two-phase flow by high speed X-ray computed tomography and real-time neutron radiography techniques, 20:29638 (RA;US)
Experimental study of horizontal annular channels under non-developed conditions, 20:29631 (RA;US)

URALS
Middle Urals' pollution prevention priorities assessment project, 20:29846 (R;US)
URANIUM
See also DEPLETED URANIUM
Aerosol formation from high-velocity uranium drops: Comparison of number and mass distributions. Final report, 20:29137 (R;US)
Baseline radionuclide concentrations in soils and vegetation around the proposed Weapons Engineering Tritium Facility and the Weapons Subsystems Laboratory at TA-16, 20:29028 (R;US)
Feasibility study of plutonium and uranium measurements in input dissolver solutions, 20:30204 (R;US)
New analysis technique for K-edge densitometry spectra, 20:31352 (R;US)
Operating new 55-gallon drum shufflers at Los Alamos, 20:28863 (R;US)
Radionuclide contaminant analysis of small mammals at Area G, TA-54, 1994, 20:29027 (R;US)
Spectroscopic studies of U(VI) sorption at the kaolinite-water interface. Final report, 20:30720 (R;US)
Synthesis of uranium metal using laser-initiated reduction of uranium tetrafluoride by calcium metal, 20:28767 (R;US)
The uranium International trade., 20:29494 (I;MX;In Spanish)
URANIUM 233
800-MeV proton irradiation of thorium and depleted uranium targets, 20:31072 (RA;US)
URANIUM 235
Improving shuffler assay accuracy, 20:30203 (R;US)
Verification of criticality accident alarm system detector locations for the X-326 process cell floor, 20:30310 (R;US)
URANIUM 235 TARGET
Preparation of uranium targets and application of analytical techniques for its evaluation., 20:30110 (I;MX;In Spanish)
URANIUM 238 TARGET
Cross-section activation measurement for U-238 through protons and deuterons in energy interval 10-14 MeV, 20:31074 (RA;US)
Preparation of uranium targets and application of analytical techniques for its evaluation., 20:30110 (I;MX;In Spanish)
URANIUM ALLOYS
Electronic properties of U_2Pt_2Sn, 20:30041 (R;US)
Electronic properties of UCuSn, 20:30043 (R;US)
Magnetic anisotropy of U_2Pd_2In, 20:30039 (R;US)
URANIUM COMPLEXES
Spectroscopic studies of U(VI) sorption at the kaolinite-water interface. Final report, 20:30720 (R;US)
Trivalent metallocene chemistry of some uranium, titanium, and zirconium complexes, 20:30240 (R;US)
URANIUM COMPOUNDS

Embrittlement of Cr-Mo steels after low fluence irradiation in HFIR, 20:30008 (RA;US)
Parametric fits to 1-D neutron transport calculations for lithium-vanadium fusion power plant blankets in cylindrical and spherical geometries, 20:31242 (R;US)

VANADIUM BASE ALLOYS
Atomic Displacements
Ductile-brittle transition behavior of V-4Cr-4Ti irradiated in the dynamic helium charging experiment, 20:30020 (RA;US)
Effect of dynamically charged helium on tensile properties of V-4Cr-4Ti, 20:30019 (RA;US)
Preliminary report on the irradiation conditions of the HFIR JP-23 experiment, 20:30003 (RA;US)

Corrosion
Chemical compatibility of structural materials in alkali metals, 20:30023 (RA;US)
U.S. Contribution 1994 Summary Report Task T12: Compatibility and irradiation testing of vanadium alloys, 20:29993 (R;US)

Density
Void structure and density change of vanadium-base alloys irradiated in the dynamic helium charging experiment, 20:30021 (RA;US)

Dislocations
Dislocation development in V-5CR-5TI and pure vanadium, 20:30013 (RA;US)

Ductile-Brittle Transitions
Ductile-brittle transition behavior of V-4Cr-4Ti irradiated in the dynamic helium charging experiment, 20:30020 (RA;US)

Electron Beam Welding
Welding development for V-Cr-Ti alloys, 20:30012 (RA;US)

Fabrication
Fabrication of 500-kg heat of V-4Cr-4Ti, 20:30015 (RA;US)

Fatigue
Fatigue behavior of unirradiated V-5Cr-5Ti, 20:30011 (RA;US)

Fracture Properties
Effect of heat treatment on microstructure and fracture toughness of a V-5Cr-5Ti alloy, 20:30014 (RA;US)
Vanadium alloy irradiation experiment X530 in EBR-II*, 20:30000 (RA;US)

Hardness
Hardness recovery of 85% cold-worked V-Ti and V-Cr-Ti alloys upon annealing at 180°C to 1200°C, 20:30017 (RA;US)

Hydrogen Embrittlement
Chemical and mechanical interactions of interstitials in V-5%Cr-5%Ti, 20:30010 (RA;US)

Impact Strength
Impact properties of 500-kg heat of V-4Cr-4Ti, 20:30016 (RA;US)

Interstitial Helium Generation
Effect of dynamically charged helium on tensile properties of V-4Cr-4Ti, 20:30019 (RA;US)
U.S. Contribution 1994 Summary Report Task T12: Compatibility and irradiation testing of vanadium alloys, 20:29993 (R;US)
Void structure and density change of vanadium-base alloys irradiated in the dynamic helium charging experiment, 20:30021 (RA;US)

Irradiation
Preliminary report on the irradiation conditions of the HFIR JP-23 experiment, 20:30003 (RA;US)

Microstructure
Chemical compatibility of structural materials in alkali metals, 20:30023 (RA;US)
Effect of heat treatment on microstructure and fracture toughness of a V-5Cr-5Ti alloy, 20:30014 (RA;US)

Hardness recovery of 85% cold-worked V-Ti and V-Cr-Ti alloys upon annealing at 180°C to 1200°C, 20:30017 (RA;US)
Void structure and density change of vanadium-base alloys irradiated in the dynamic helium charging experiment, 20:30021 (RA;US)

Oxidation
Chemical and mechanical interactions of interstitials in V-5%Cr-5%Ti, 20:30010 (RA;US)
Effect of oxidation on tensile behavior of V-5Cr-5Ti alloy, 20:30018 (RA;US)

Physical Properties
U.S. Contribution 1994 Summary Report Task T12: Compatibility and irradiation testing of vanadium alloys, 20:29993 (R;US)

Physical Radiation Effects
Vanadium alloy irradiation experiment X530 in EBR-II*, 20:30000 (RA;US)

Temperature Dependence
Fatigue behavior of unirradiated V-5Cr-5Ti, 20:30011 (RA;US)

Tensile Properties
Chemical and mechanical interactions of interstitials in V-5%Cr-5%Ti, 20:30010 (RA;US)
Dislocation development in V-5CR-5TI and pure vanadium, 20:30013 (RA;US)
Effect of dynamically charged helium on tensile properties of V-4Cr-4Ti, 20:30019 (RA;US)
Effect of oxidation on tensile behavior of V-5Cr-5Ti alloy, 20:30018 (RA;US)

VANADIUM COMPOUNDS

Core Flooding Systems
Flooding of a large, passive, pressure-tube LWR, 20:29678 (RA;US)

Failures
Effects of LWR environments on fatigue life of carbon and low-alloy steels, 20:29992 (R;US)

Fatigue
Effects of LWR environments on fatigue life of carbon and low-alloy steels, 20:29992 (R;US)

Fuel Channels
Flooding of a large, passive, pressure-tube LWR, 20:29678 (RA;US)
Large-scale transport across narrow gaps in rod bundles, 20:29508 (RA;US)
New model for burnout prediction in channels of various cross-section, 20:29751 (RA;US)
Numerical determination of lateral loss coefficients for subchannel analysis in nuclear fuel bundles, 20:29757 (RA;US)
On the look-up tables for the critical heat flux in tubes (history and problems), 20:29752 (RA;US)

Void fraction distribution in a heated rod bundle under flow stagnation conditions, 20:29756 (RA;US)

Fuel-Coolant Interactions
Boiling characteristics of dilute polymer solutions and implications for the suppression of vapor explosions, 20:29706 (RA;US)
Correlations between the disintegration of melt and the measured impulses in steam explosions, 20:29702 (RA;US)
Thermal-hydraulic behaviors of vapor-liquid interface due to arrival of a pressure wave, 20:29705 (RA;US)

Heat Transfer
A study of the dispersed flow interfacial heat transfer model of RELAP5/MOD2.5 and RELAP5/MOD3, 20:29730 (RA;US)

Hydraulics
A simple modelling of mass diffusion effects on condensation with noncondensable gases for the CATHARE Code, 20:29738 (RA;US)

Loss Of Coolant
Flooding of a large, passive, pressure-tube LWR, 20:29678 (RA;US)
Further evaluation of the CSNI separate effect test activity, 20:29764 (RA;US)

Meltdown
Crust formation and its effect on the molten pool coolability, 20:29717 (RA;US)
Experimental investigation of 150-KG-scale corium melt jet quenching in water, 20:29707 (RA;US)

Pressure Vessels
Effects of LWR environments on fatigue life of carbon and low-alloy steels, 20:29992 (R;US)
Modeling of heat and mass transfer processes during core melt discharge from a reactor pressure vessel, 20:29714 (RA;US)

Primary Coolant Circuits
Environmentally assisted cracking in light water reactors. Semiannual report, April 1994–September 1994, Volume 19, 20:29516 (R;US)

Reactor Accidents
Oxidation during reflood of reactor core with melting cladding, 20:29716 (RA;US)

Reactor Channels
General correlation for prediction of critical heat flux ratio in water cooled channels, 20:29507 (RA;US)
Turbulent mixed convection in vertical and inclined flat channels with aiding flows, 20:29510 (RA;US)

Reactor Cooling Systems
Correlation of critical heat flux data for uniform tubes, 20:29513 (RA;US)
The role of heater thermal response in reactor thermal limits during oscillartory two-phase flows, 20:29505 (RA;US)
Water hammer phenomena occurring in nuclear power installations while filling horizontal pipe containing saturated steam with liquid, 20:29509 (RA;US)

Reactor Safety
Correlations between the disintegration of melt and the measured impulses in steam explosions, 20:29702 (RA;US)
Crust formation and its effect on the molten pool coolability, 20:29717 (RA;US)
Numerical simulation of multi-dimensional two-phase flow based on flux vector splitting, 20:29642 (RA;US)

Safety Analysis
A simple modelling of mass diffusion effects on condensation with noncondensable gases for the CATHARE Code, 20:29738 (RA;US)
A study of the dispersed flow interfacial heat transfer model of RELAP5/MOD2.5 and RELAP5/MOD3, 20:29730 (RA;US)
ATHLET validation using accident management experiments, 20:29737 (RA;US)
Analysis of supercritical vapor explosions using thermal detonation wave theory, 20:29703 (RA;US)
Boiling characteristics of dilute polymer solutions and implications for the suppression of vapor explosions, 20:29706 (RA;US)
Code package "SVECHA": Modeling of core degradation phenomena at severe accidents, 20:29720 (RA;US)
Evaluation and assessment of reflooding models in RELAP5/Mod2.5 and RELAP5/Mod3 codes using Lehigh University and PSI-Neptun bundle experimental data, 20:29741 (RA;US)
Experimental investigation of 150-KG-scale corium melt jet quenching in water, 20:29707 (RA;US)
Experimental studies of thermal and chemical interactions between molten aluminum and water, 20:29712 (RA;US)
Experimental studies of thermal and chemical interactions between oxide and silicide nuclear fuels with water, 20:29709 (RA;US)
FARO base case post-test analysis by COMETA code, 20:29735 (RA;US)
FCI experiments in the corium/water system, 20:29708 (RA;US)
Interaction between the radiative flux emitted by a corium melt and aerosols from corium/concrete interaction, 20:29713 (RA;US)
Melcor benchmarking against integral severe fuel damage tests, 20:29744 (RA;US)
Modeling of heat and mass transfer processes during core melt discharge from a reactor pressure vessel, 20:29714 (RA;US)
On the constitutive description of the microinteractions concept in steam explosions, 20:29701 (RA;US)
Overview of CSNI separate effects tests validation matrix, 20:29742 (RA;US)
Oxidation during reflood of reactor core with melting cladding, 20:29716 (RA;US)

Renewable energy load assessment for Boquillas Del Carmen Coahuila, Mexico, 20:29966 (R;US)

WINDOWS
Proton-beam window design for a transmutation facility operating with a liquid lead target, 20:30458 (RA;US)
Using infrared thermography for the creation of a window surface temperature database to validate computer heat transfer models, 20:29912 (R;US)
Windows technology assessment, 20:29914 (R;US)

WIPP
Measurement of VOC permeability of polymer bags and VOC solubility in polyethylene drum liner, 20:28840 (R;US)
Using a multiphase flow code to model the coupled effects of repository consolidation and multiphase brine and gas flow at the Waste Isolation Pilot Plant, 20:28970 (R;US)

WOLFRAM
See TUNGSTEN

WOMEN
Review of laboratory programs for women Points-of-Contact Committee, 20:31298 (R;US)
Women in engineering program advocates network (WEPAN): Evaluation of the fourth annual conference, 20:29820 (R;US)

WOOD
Ash from the combustion of treated wood: Characteristics and management options, 20:29283 (RA;US)
Biomass in the Netherlands, 20:29277 (RA;US)
Copolymer resins made of agricultural and forest residues extracts for wood laminating adhesives, 20:29370 (RA;US)
Fast pyrolysis of pretreated wood, 20:29271 (RA;US)
Recycling of treated wood poles, 20:29268 (RA;US)

WOOD ALCOHOL
See METHANOL

WOOD BURNING FURNACES
Carbohydrate biofuels II: The need and the potential for rootfuel in the Navajo Nation, 20:29314 (RA;US)

WOOD FUELS
Carbohydrate biofuel I: Rootfuel studies in Mexico, Brazil, Zimbabwe and India, 20:29224 (RA;US)
Characterization of wood ash and its regulations for land applications in Great Lakes region, 20:29353 (RA;US)
Densified fuels from wood waste, 20:29309 (RA;US)
Modular plants producing fuels for biomass cogeneration plants, 20:29252 (RA;US)
Operation of a direct-fired combustion turbine system on pulverized wood, 20:29355 (RA;US)
Possibilities for increasing the power generation with biomass in pulp and paper mills, 20:29357 (RA;US)
Processing and utilizing urban wood waste and pallets for fuel, 20:29250 (RA;US)
Results of the Finnish bioenergy research programme, 20:29278 (RA;US)
The economic impact of wood energy in the Northeastern United States, 20:29333 (RA;US)
Willow firing in retrofitted Irish peat plant, 20:29298 (RA;US)

WOOD OILS
Potential production of hydrocarbons from the conversion of a wood-derived oil over some aluminophosphate catalysts, 20:29269 (RA;US)

WOOD PRODUCTS INDUSTRY
See also PAPER INDUSTRY
3 MW to 6 MW Sawmill Energy Displacement Plants featuring, 20:29942 (RA;US)
Biomass energy opportunities on former sugarcane plantations in Hawaii, 20:29196 (RA;US)
Biomass resources for electric generation in the Pacific Northwest, 20:29195 (RA;US)
Mechanical properties and potential commercial applications of agricultural composites, 20:29373 (RA;US)
Phenol-formaldehyde resin substitutes from biomass tars, 20:29366 (RA;US)
Possibilities for increasing the power generation with biomass in pulp and paper mills, 20:29357 (RA;US)

WOOD WASTES
Cofiring waste biofuels and coal for emissions reduction, 20:29439 (RA;US)
Cofiring wood waste and coal in cyclone boilers: Test results and prospectus, 20:29438 (RA;US)
Densified fuels from wood waste, 20:29309 (RA;US)
Drying and burning wood waste using pulse combustion, 20:29356 (RA;US)
Environmental assessment of the atlas bio-energy waste wood fluidized bed gasification power plant. Final report, 20:29350 (R;US)
Pilot Plant results with Inclined Fluidized Bed technology, 20:29294 (RA;US)
Processing and utilizing urban wood waste and pallets for fuel, 20:29250 (RA;US)
Resource potential of wood-based wastes in the United States, 20:29198 (RA;US)
Survey on promotion of construction of the waste utilization energy system in the cold area, 20:29437 (R;JP;In Japanese)
The PGI biowaste converter-a unique thermal/electrical energy system which operates on solid waste, 20:29295 (RA;US)
Urban wood waste in Michigan: Supply and policy issues, 20:29201 (RA;US)
Urban wood waste resource assessment, the state of Indiana, 20:29200 (RA;US)

WOOD-FUEL POWER PLANTS
3 MW to 6 MW Sawmill Energy Displacement Plants featuring, 20:29942 (RA;US)
In the aftermath of PURPA: The future of the biomass energy industry in Maine, 20:29321 (RA;US)
Modular plants producing fuels for biomass cogeneration plants, 20:29252 (RA;US)
Private funding of a biomass power project: Williams Lake case history, 20:29324 (RA;US)
Urban wood waste in Michigan: Supply and policy issues, 20:29201 (RA;US)

WORKERS

WORKING (MATERIALS)
See MATERIALS WORKING

WT-3 TOKAMAK
ECH (electron cyclotron heating) experiments on WT-3 by a focusing launcher, 20:31175 (RA;JP)

WWER TYPE REACTORS
See also LOVIISA-1 REACTOR
LOVIISA-2 REACTOR
PAKS-1 REACTOR
PAKS-2 REACTOR
PAKS-3 REACTOR
PAKS-4 REACTOR
WWER-3 REACTOR
WWER-5 REACTOR
Assessment of computer codes for VVER-440/213-type nuclear power plants, 20:29731 (RA;US)
Natural circulation in a VVER reactor geometry: Experiments with the PACTEL facility and Cathare simulations, 20:29655 (RA;US)
Parametric numerical investigaion of natural convection in a heat-generating fluid with phase transitions, 20:29656 (RA;US)
Reflooding and boil-off experiments in a VVER-440 like rod bundle and analyses with the CATHARE code, 20:29649 (RA;US)

Results of international standard problem No. 36 severe fuel damage experiment of a VVER fuel bundle, 20:29715 (RA;US)

WWER-1000 REACTOR
See WWER-5 REACTOR

WWER-3 REACTOR
CATHARE2 calculation of SPE-3 test small break loca on PMK facility, 20:29733 (RA;US)
Quantitative code accuracy evaluation of ISP33, 20:29734 (RA;US)
Simulation of a beyond design-basis-accident with RELAP5/MOD3.1, 20:29671 (RA;US)
Strength analyses of the bubbler condenser structure of WWER-440 model 213 nuclear power plants. Reference plant: Bohunice V2 (Slovakia). Report of the IAEA Technical Cooperation Project RER/9/004 on evaluation of safety aspects of WWER-440 model 213 nuclear power plants, 20:29466 (R;XA)

WWER-440 REACTOR
See WWER-3 REACTOR

WWER-5 REACTOR
VIPRE modeling of VVER-1000 reactor core for DNB analyses, 20:29732 (RA;US)

WWER-500 REACTOR
See WWER-5 REACTOR

WYOMING
Baseline risk assessment of ground water contamination at the uranium mill tailings site near Riverton, Wyoming. Revision 1, 20:29051 (R;US)
Work plan for monitor well installation water and sediment sample collection aquifer testing and topographic surveying at the Riverton, Wyoming, UMTRA Project Site, 20:29066 (R;US)

X

X RADIATION
X-ray laser interferometry for probing high-density plasmas, 20:31200 (R;US)

X-RASERS
See X-RAY LASERS

X-RAY DIFFRACTOMETERS
Observation of X-ray intensity distribution from the anode of a fine-focus tube using $\Delta\omega$ - $\Delta 2\theta$ scans, 20:30536 (R;AU)

X-RAY DOSIMETRY
Low-energy x-ray dosimetry studies (7 to 17.5 keV) with synchroton radiation, 20:30808 (R;US)

X-RAY LASERS
Characterization and modeling of soft x-ray lasers, 20:31202 (R;US)
Generation of x-ray pulses with rapid rise times to pump inner-shell photo-ionized x-ray lasing in carbon at 45 Å, 20:30388 (R;US)
Selected topics in particle accelerators: Proceedings of the CAP meetings. Volume 4, 20:30397 (R;US)

X-RAY RADIOGRAPHY
Computational support for ITS and PHERMEX. Final report, 20:30451 (R;US)

X-RAY SOURCES
Alignment and magnet error tolerances for the LCLS x-ray FEL, 20:30384 (R;US)
Analysis of a high intensity x-ray source using a specialized Doppler interferometer system, 20:30550 (R;US)
Compton scattering in the ALS booster, 20:30366 (R;US)
Selected topics in particle accelerators: Proceedings of the CAP meetings. Volume 4, 20:30397 (R;US)
X-ray source production in foil implosion machines, 20:29171 (R;US)

X-RAY SPECTROMETERS
A 100 ps gated x-ray spectrometer, 20:30515 (R;US)
Opto-mechanical design and fabrication services. Final report, 20:30604 (R;US)

X-RAY SPECTROSCOPY
New analysis technique for K-edge densitometry spectra, 20:31352 (R;US)

X-RAY TRANSMISSION SCANNING
See PHOTON TRANSMISSION SCANNING

X-RAY TUBES
Observation of X-ray intensity distribution from the anode of a fine-focus tube using $\Delta\omega$ - $\Delta 2\theta$ scans, 20:30536 (R;AU)

XI C NEUTRAL BARYONS
Cabibbo favored hadronic decays of charmed baryons in flavor SU(3), 20:31005 (R;XA)

XI C PLUS BARYONS
Cabibbo favored hadronic decays of charmed baryons in flavor SU(3), 20:31005 (R;XA)

Y

Y*RESONANCES
See BARYONS

Y-12 PLANT
Calendar Year 1994 Groundwater Quality Report for the Bear Creek Hydrogeologic Regime Y-12 Plant, Oak Ridge, Tennessee, 20:29125 (R;US)

YANG-MILLS THEORY
N=1 super-Chern-Simons coupled to parity-preserving matter from Atiyah-Ward space-time, 20:30930 (R;XA)
Yang-Mills theory in the light-cone gauge with Lagrange multiplier field, 20:30932 (R;XA)
Yang-Mills/sigma model (2,0) coupling in varieties with torsion, 20:30949 (IA;BR;In Portuguese)

URANIUM 235
A repository released-dose model for the evaluation of long-lived fission product transmutation effectiveness, 20:30721 (R;US)
Brief overview of the long-lived radionuclide separation processes developed in France in connection with the SPIN program, 20:28770 (RA;US)
Long-lived isotopes production in Pb-Bi target irradiated by high energy protons, 20:31080 (RA;US)

YELLOWSTONE NATIONAL PARK
Producing biodiesel for the "truck in the park" project, 20:29306 (RA;US)

YIELD (FISSION)
See FISSION YIELD

YOUNG MODULUS
The effect of structural defects in SiC particles on the static & dynamic mechanical response of a 15 volume percent SiC/6061-Al matrix composite, 20:30040 (R;US)

YTTERBIUM COMPLEXES
Bis(pentamethylcyclopentadienyl)ytterbium: An investigation of weak interactions in solution using multinuclear NMR spectroscopy, 20:30239 (R;US)

YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES

YTTRIUM OXIDES
Advanced methods for processing ceramics, 20:30127 (RA;US)
Direct correlation of transport properties and microstructure in $Y_1Ba_2Cu_3O_{7-x}$ thin film grain boundaries, 20:30090 (R;US)

ODS iron aluminides, 20:29995 (R;US)
Photo- and cathodoluminescence of hydrothermally synthesized $Y_3Al_5O_{12}$:Tb and $NaY(WO_4)_2$:Tb, 20:30146 (R;US)
Rietveld refinement of $YBa_2Cu_{3-x}Ni_xO_y$ prepared by quenching and oxygen gettering, 20:30149 (R;US)
Structure and transport properties of [001] tilt grain boundaries in $YBa_2Cu_3O_x$, 20:30091 (R;US)

YTTRIUM TUNGSTATES
Photo- and cathodoluminescence of hydrothermally synthesized $Y_3Al_5O_{12}$:Tb and $NaY(WO_4)_2$:Tb, 20:30146 (R;US)

YUCCA MOUNTAIN
Geology
Fluid inclusion studies of calcite veins from Yucca Mountain, Nevada, Tuffs: Environment of formation, 20:30692 (R;US)
Isotopic studies of Yucca Mountain soil fluids and carbonate pedogenesis, 20:30693 (R;US)

Hydrology
Application of TOUGH to hydrologic problems related to the unsaturated zone site investigation at Yucca Mountain, Nevada, 20:28899 (RA;US)
Characterization of a desert soil sequence at Yucca Mountain, NV, 20:30689 (R;US)
Drift-scale thermo-hydrologic analyses for the proposed repository at Yucca Mountain, NV, 20:28895 (RA;US)
Ground-water recharge in Fortymile Wash near Yucca Mountain, Nevada, 1992–1993, 20:30688 (R;US)
Isotopic studies of Yucca Mountain soil fluids and carbonate pedogenesis, 20:30693 (R;US)
Observations of water movement in a block of fractured welded Tuff, 20:29010 (R;US)
Parametric analysis of a TOUGH2 model for the unsaturated zone at Yucca Mountain (Yucca Mountain Project), 20:29030 (RA;US)
Preliminary development of the LBL/USGS three-dimensional site-scale model of Yucca Mountain, Nevada, 20:30850 (R;US)
Shallow infiltration processes in arid watersheds at Yucca Mountain, Nevada, 20:30691 (R;US)
Simulation of flow in the unsaturated zone beneath Pagany Wash, Yucca Mountain, 20:29012 (R;US)
The use of TOUGH2 for the LBL/USGS 3-dimensional site-scale model of Yucca Mountain, Nevada, 20:29029 (RA;US)
Verification of a 1-dimensional model for predicting shallow infiltration at Yucca Mountain (Yucca Mountain Project), 20:30690 (R;US)

Radioactive Waste Facilities
Geothermal areas as analogues to chemical processes in the near-field and altered zone of the potential Yucca Mountain, Nevada repository, 20:28979 (R;US)

Scale Models
Inverse modeling as a step in the calibration of the LBL-USGS site-scale model of Yucca Mountain, 20:28892 (R;US)

Site Characterization
Application of TOUGH to hydrologic problems related to the unsaturated zone site investigation at Yucca Mountain, Nevada, 20:28899 (RA;US)
Batch and column studies of adsorption of Li, Ni and Br by a reference sand for contaminant transport experiments, 20:28968 (R;US)
Drift-scale thermo-hydrologic analyses for the proposed repository at Yucca Mountain, NV, 20:28895 (RA;US)
Parametric analysis of a TOUGH2 model for the unsaturated zone at Yucca Mountain (Yucca Mountain Project), 20:29030 (RA;US)
Preliminary development of the LBL/USGS three-dimensional site-scale model of Yucca Mountain, Nevada, 20:30850 (R;US)
Secondary plant succession on disturbed sites at Yucca Mountain, Nevada, 20:30632 (R;US)
Site characterization progress report: Yucca Mountain, Nevada, October 1, 1994–March 31, 1995, Number 12. Nuclear Waste Policy Act (Section 113), 20:28826 (R;US)
The use of TOUGH2 for the LBL/USGS 3-dimensional site-scale model of Yucca Mountain, Nevada, 20:29029 (RA;US)

Underground Facilities
Application of TOUGH to hydrologic problems related to the unsaturated zone site investigation at Yucca Mountain, Nevada, 20:28899 (RA;US)
Drift-scale thermo-hydrologic analyses for the proposed repository at Yucca Mountain, NV, 20:28895 (RA;US)
Parametric analysis of a TOUGH2 model for the unsaturated zone at Yucca Mountain (Yucca Mountain Project), 20:29030 (RA;US)
The use of TOUGH2 for the LBL/USGS 3-dimensional site-scale model of Yucca Mountain, Nevada, 20:29029 (RA;US)

Vegetative Propagation
Secondary plant succession on disturbed sites at Yucca Mountain, Nevada, 20:30632 (R;US)

Z

Z NEUTRAL BOSONS
A precise measurement of the left-right asymmetry of Z Boson production at the SLAC linear collider, 20:31012 (R;US)
A precise measurement of the left-right cross section asymmetry in Z boson production, 20:31013 (R;US)
Limits on the anomalous $ZZ\gamma$ and $Z\gamma\gamma$ couplings in $p\bar{p}$ collisions at $\sqrt{s}$ = 1.8 TeV, 20:31001 (R;US)
Measurements of $\Gamma(Z^O \rightarrow b\bar{b})/\Gamma(Z^O \rightarrow \text{hadrons})$ using the SLD, 20:31017 (R;US)
Measurements of the W and Z inclusive cross sections and determination of the W decay width, 20:31011 (R;US)
Precision tests of quantum chromodynamics and the standard model, 20:30991 (R;US)
The lifetime probability tag measurement of R_b using the SLD, 20:31016 (R;US)
The production of $\pi^{\pm}$, $K^{\pm}$, p, k^0 and Λ^0 in hadronic Z^0 decays, 20:31015 (R;US)

ZEA MAYS
See MAIZE

ZEOLITES
Direct catalytic decomposition of nitric oxide. Final report, 20:28650 (R;US)
Selective inorganic thin films, 20:30138 (RA;US)
Sorption of Fe^{3+}, Co^{2+}, Ce^{3+}, Cs^+ and Ba^{2+} in zeolite X., 20:30233 (I;MX;In Spanish)

ZERO POWER REACTORS
On the possibility of altering the trajectories of asteroids and comets using plutonium implantation, 20:30581 (R;US)

ZET PINCH
See LONGITUDINAL PINCH

ZHURAVLEV PROCESS
See COAL GASIFICATION

ZINC BASE ALLOYS
Genotoxic valuation of Zinalco, a zinc base alloy, by the mutation and somatic recombination test in Drosophila Melanogaster., 20:30200 (I;MX;In Spanish)

ZINC HALIDE PROCESS
See COAL LIQUEFACTION

ZINC IONS
A quantitative mechanistic description of Ni, Zn and Ca sorption on Na-Montmorillonite. Part I: Physico-chemical characterisation and titration measurements, 20:30222 (R;CH)

ZINC OXIDES
Luminescence and photoconversion of solar energy, 20:30249 (RA;CH)
Solar-processed zinc as clean energy carrier, 20:29189 (RA;CH)

ZINC-AIR BATTERIES
Development and cycle test of zinc-oxygen cells, 20:29811 (RA;CH)

ZIRCALOY
Grain size determination in zirconium alloys. Final report of a co-ordinated research programme, 1989-1992, 20:30026 (R;XA)
Oxidation during reflood of reactor core with melting cladding, 20:29716 (RA;US)

ZIRCONIUM
Deformation response of Zr after shock-loading, 20:30038 (R;US)

Techniques for in situ HVEM mechanical deformation of nanostructural materials, 20:30084 (R;US)

ZIRCONIUM 93 TARGET
Direct irradiation of long-lived fission products in an ATW system, 20:28883 (RA;US)

ZIRCONIUM ALLOYS
Measuring enthalpies of formation using thick multilayer foils and differential scanning calorimetry, 20:30080 (R;US)

ZIRCONIUM BORIDES
Low-mass, intrinsically-hard high-temperature radiator. Final report, Phase I, 20:29489 (R;US)

ZIRCONIUM COMPLEXES
Trivalent metallocene chemistry of some uranium, titanium, and zirconium complexes, 20:30240 (R;US)

ZIRCONIUM OXIDES
Advanced methods for processing ceramics, 20:30127 (RA;US)
Biomimetic thin film synthesis, 20:30182 (RA;US)
The mixing of particle clouds plunging into water, 20:29711 (RA;US)

ZUNI EVENT
See NUCLEAR EXPLOSIONS

Contract Number Index

Numbers assigned to DOE contracts announced in documents in this publication are listed. Contract numbers are sorted alphanumerically and list the primary corporate author of the document cited, the citation number, and the report number or other document identification.

Report Number Index

The report number index consists of the alphanumeric identifiers assigned to report literature as well as patent and conference literature cited in this publication. Entries provide the abstract number; the source(s) of availability of the document; the GPO file prefix for GPO depository library documents; the order number for OSTI and NTIS report ordering purposes; and, if the document was distributed under the DOE distribution program, the category number is shown for paper copy (PC), microfiche (MF), or no distribution (ND). These categories are included to assist DOE librarians in responding to requests for reports in their collections. The index also lists secondary numbers, with the corresponding abstract numbers and cross-references to other identifying numbers.

ORDER FORM

DOE and DOE Contractors: Fill in Parts I, II, and IV. **Others:** Fill in Parts I, III, and IV. Mark appropriate blanks in Part IV to indicate quantity and form (microfiche or paper copy).

I. SHIPPING AND PAYMENT INFORMATION

Ordering Address

Name _____ Telephone _____

Address _____

City _____ State _____ Zip _____

Shipping Address (if different from above)

Name _____

Address _____

City _____ State _____ Zip _____

_____

SIGNATURE (Required to validate ALL orders)

II. OSTI ORDERS (DOE and DOE contractors can order from OSTI.)

☐ Charge OSTI deposit account no. _____

☐ Charge to my ☐ VISA ☐ Mastercard

_____ _____

Account Number **Card expiration date**

Mail orders to: U.S. Department of Energy
Office of Scientific and Technical Information
P.O. Box 62
Oak Ridge, TN 37831

III. NTIS ORDERS

☐ Charge NTIS deposit account no. _____

☐ Check/Money Order enclosed for $ _____

☐ Charge to my ☐ American Express ☐ VISA ☐ Mastercard

_____ _____

Account Number **Card expiration date**

☐ Ship and Bill (see below for restrictions) _ _ _ _ _ _ _ _ _

Employer identification number (9 digits) —

Purchase Order number _____

Phone number of billing office _____
(Required for Ship & Bill orders)

Ship & Bill service is restricted to North American business locations for an extra $7.50 per order (or per Custom Search). The business' employer identification number plus the phone number of the office paying the bill are required to process these requests. A late payment charge will be applied to billings more than 30 days overdue. Prepaying, using an NTIS Deposit Account or a charge account, speeds order processing. Be sure payment and order are sent together. Checks, payable to NTIS, must be in U.S. dollars.

Mail orders to: U.S. Department of Commerce
Technology Administration
National Technical Information Service
Springfield, VA 22161

IF NO METHOD OF PAYMENT IS INDICATED, YOUR ORDER WILL BE RETURNED TO YOU AS A PRICE QUOTE UNPROCESSED.

IV. SELECTIONS

Order number _____ Report number _____

Abstract number (with vol., issue) _____

No. of fiche _____ No. of paper copies _____

Order number _____ Report number _____

Federal Depository Library Program

As a result of an agreement between the U.S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are not sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.

ARKANSAS STATE LIBRARY
